

Chapter 12

Responsibility Centres *and* Transfer Pricing

BUSI 1005 W2013

Learning Objectives

1. **Explain** the role of responsibility accounting in fostering **goal congruence**. ✓
2. **Define and give an example** of a Cost centre, a Revenue centre, a Profit centre, and an Investment centre. **Evaluation of each centre.**
3. **Compute** an investment centre's return on investment (ROI), residual income (RI), and economic value added (EVA).
4. **Explain** how a manager can improve ROI.

BUSI 1005 W2013

Learning Objectives (cont'd)

5. **Describe** some advantages and disadvantages of both ROI and residual income as divisional performance measures.
6. **Explain** how to measure a division's income and invested capital.
7. **Use the General Economic rule to set an optimal transfer price.**
8. **Explain how to base a transfer price on**
1. Market Prices, 2. costs, or 3. negotiations.

BUSI 1005 W2013

Ch. 12 part I Responsibility Accounting

Accounting is also structured to measure the performance of people and/or departments to foster **Goal Congruence**.

A Responsibility centre is a sub-unit in an organization whose manager is held accountable for specified financial results.

Goal Congruence

BUSI 1005 W2013

Responsibility Centres (cont'd)

Cost Centre
Segment has **control** over the incurrence of costs.

The Paint Department in an automobile plant.

Revenue Centre
Segment is responsible for the revenue of a unit **because of control**.

The Reservations Department of an airline.

BUSI 1005 W2013

Responsibility Centres (cont'd)

Profit Centre
Segment has **control** over both costs and revenues.

Company-owned restaurant in a fast-food chain.

BUSI 1005 W2013

Investment Centre
Segment has **control** over profits and invested capital.

A division of a large corporation.

Performance [aka Variance] Reports

he budgeted and amounts, and the as between these s, of key financial appropriate for the if responsibility centre.

| | Flexible Budget* | | Actual Results* | | Variance† | |
|---|------------------|-----------------|-----------------|-----------------|---------------|---------------|
| | February | Year to Date | February | Year to Date | February | Year to Date |
| Company | \$30,000 | \$64,507 | \$30,716 | \$64,473 | \$66 F | \$33 F |
| Mau Division | \$18,400 | \$38,020 | \$18,470 | \$38,630 | \$70 F | \$10 F |
| Waimea Beach Resort | \$2,200 | \$5,547 | \$2,246 | \$5,560 | \$46 U | \$14 U |
| Total profit | \$10,600 | \$26,940 | \$10,000 | \$26,283 | \$60 F | \$33 F |
| Costs | | | | | | |
| Waimea Beach Resort | \$6,050 | \$12,700 | \$6,050 | \$12,740 | \$10 F | \$40 F |
| Diamond Head Lodge | 2,100 | 4,500 | 2,050 | 4,430 | 50 U | 70 U |
| | 4,150 | 8,347 | 4,136 | 8,770 | 86 F | 23 F |
| Total profit | \$19,200 | \$35,547 | \$19,246 | \$35,540 | \$44 U | \$74 U |
| Variable Costs | | | | | | |
| Grounds and Maintenance | (\$45) | (\$90) | (\$44) | (\$90) | \$ 1 F | — |
| Housekeeping and Custodial | (40) | (90) | (41) | (90) | 1 U | — |
| Recreational Services | 40 | 80 | 41 | 80 | 1 F | \$ 3 F |
| Hospitality | 2,800 | 6,000 | 2,840 | 6,030 | 40 F | 30 F |
| | 3,300 | 7,042 | 3,340 | 7,082 | 40 F | 10 U |
| Total profit | \$4,110 | \$8,742 | \$4,136 | \$8,770 | \$60 F | \$23 F |
| Food and Beverage Department | | | | | | |
| Banquets and Catering | \$600 | \$1,200 | \$605 | \$1,265 | \$ 5 F | \$ 5 F |
| Restaurants | 1,785 | 3,750 | 1,760 | 3,740 | 25 U | 10 U |
| | 2,385 | 4,950 | 2,365 | 4,985 | 20 U | 20 U |
| Total profit | \$1,385 | \$2,950 | \$1,340 | \$2,985 | \$45 U | \$10 U |
| Expenses | | | | | | |
| Kitchen staff wages | (\$80) | (\$160) | (\$78) | (\$169) | \$ 2 F | \$ 1 U |
| Fuel | (678) | (1,420) | (678) | (1,421) | 3 U | 1 U |
| Paper products | (120) | (250) | (115) | (248) | 5 F | 2 F |
| Variable overhead | (75) | (150) | (71) | (154) | 4 U | 4 U |
| Fixed overhead | (95) | (180) | (93) | (181) | 2 F | 1 U |
| Total expense | \$1,428 | \$2,960 | \$1,450 | \$2,973 | \$22 F | \$11 U |

*Numbers in bold parentheses denote profit, numbers with parentheses denote expenses, numbers in thousands.
†F denotes favorable variance, U denotes unfavorable variance.

BUSI 1005 W2013

Measuring Performance in Investment Centres

Investment Centre managers make decisions that affect both profit and invested capital.

Corporate Headquarters

Investment/Profit Centre Evaluation → **1. Return on investment, 2. Residual income, or 3. Economic value added.**

BUSI 1005 W2013

Return on Investment (ROI)

$$\text{ROI} = \frac{\text{Income}}{\text{Invested Capital}}$$

$$\text{ROI} = \frac{\text{Income}}{\text{Sales Revenue}} \times \frac{\text{Sales Revenue}}{\text{Invested Capital}}$$

Sales Margin

Capital Turnover

BUSI 1005 W2013

Improving ROI

Three ways to improve ROI

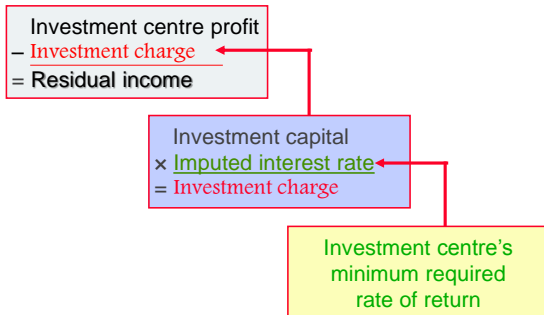

BUSI 1005 W2013

ROI Advantages and Disadvantages

- ROI measures return in a percentage form rather than in absolute dollars, which is helpful when comparing segments of different sizes. *Why?*
- A drawback to using ROI is the potential of decreased goal congruence. *How??*

BUSI 1005 W2013

Residual Income

BUSI 1005 W2013

Residual Income Advantages and Disadvantages

- As long as the residual income of a project is a positive amount, the project is deemed attractive because it increases a manager's income pool. Thus, any project that returns more than the corporate min. return will be accepted in accordance with top management's desire.
- Since residual income is expressed in absolute dollar terms, *an analyst* forfeits the ability to compare firms/divisions of differing sizes on a common basis.

BUSI 1005 W2013

In Summary

Both ROI and residual income are useful, but both tools have drawbacks. Therefore, companies will use a combination of ROI and residual income (as well as other measures) to evaluate performance.

BUSI 1005 W2013

Issues: Measuring Investment Capital

3 Issues must be considered before we can properly measure the investment capital:

First: what assets should be included?

1. Total assets.
2. Total productive assets.
3. Only the assets controllable by the manager being evaluated.

Second: Should we use beginning or ending values?

Third Issue: Should the assets be shown at historical or current cost?

BUSI 1005 W2013

Measuring Investment Centre Income

Division managers should be evaluated on profit margin they control.

– Exclude these costs:

- Costs traceable to the division but not controlled by the division manager.
- Common costs incurred elsewhere and allocated to the division. *BSC*

The key Controllability.

BUSI 1005 W2013

CH. 12 Part II Transfer Pricing

The transfer price affects the profit measure for both the selling division and the buying division.

BUSI 1005 W2013

Goal Congruence!

The ideal transfer price allows each division manager to make decisions that maximize the company's profit, while attempting to maximize his/her own division's profit. **This is the GOAL**

BUSI 1005 W2013

General-Transfer-Pricing Rule

$$\begin{array}{l}
 \text{Transfer} \\
 \text{price}
 \end{array}
 =
 \begin{array}{l}
 \text{Additional outlay} \\
 \text{cost per unit} \\
 \text{incurred} \\
 \text{because} \\
 \text{goods are} \\
 \text{transferred}
 \end{array}
 +
 \begin{array}{l}
 \text{Opportunity} \\
 \text{cost} \\
 \text{per unit to the} \\
 \text{organization} \\
 \text{because of} \\
 \text{the transfer}
 \end{array}$$

BUSI 1005 W2013

Scenario I: No Excess Capacity

- The Battery Division makes a standard 12-volt battery.

| | |
|----------------------------|------------------------|
| Production capacity | 300,000 units |
| Selling price per battery | \$40 (to outsiders) |
| Variable costs per battery | \$18 |
| Fixed costs per battery | \$7 (at 300,000 units) |

- The Battery division is currently selling 300,000 batteries to outsiders at \$40. The Auto Division can use 100,000 of these batteries in its X-7 model.

What is the appropriate transfer price?

BUSI 1005 W2013

Scenario I: No Excess Capacity (cont'd)

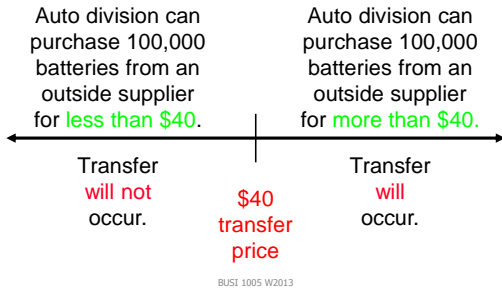

$$\begin{array}{l}
 \text{Transfer} \\
 \text{price}
 \end{array}
 =
 \begin{array}{l}
 \text{Additional outlay} \\
 \text{cost per unit} \\
 \text{incurred because} \\
 \text{goods are} \\
 \text{transferred}
 \end{array}
 +
 \begin{array}{l}
 \text{Opportunity cost} \\
 \text{per unit to the} \\
 \text{organization} \\
 \text{because of} \\
 \text{the transfer}
 \end{array}$$

$$\begin{array}{l}
 \text{Transfer} \\
 \text{price}
 \end{array}
 =
 \begin{array}{l}
 \$18 \text{ variable} \\
 \text{cost per battery}
 \end{array}
 +
 \begin{array}{l}
 \$22 \text{ Contribution} \\
 \text{lost if outside} \\
 \text{sales given up}
 \end{array}$$

$$\begin{array}{l}
 \text{Transfer} \\
 \text{price}
 \end{array}
 =
 \begin{array}{l}
 \$40 \text{ per battery}
 \end{array}$$

BUSI 1005 W2013

Scenario I: No Excess Capacity (cont'd)

Scenario I: No Excess Capacity (cont'd)

When the selling division is operating at capacity, the transfer price should be set at the market price.

Q. What if mktg. costs are less if sold internally ?

BUSI 1005 W2013

Scenario II: Excess Capacity

- The Battery Division makes a standard 12-volt battery.

| | |
|----------------------------|------------------------|
| Production capacity | 300,000 units |
| Selling price per battery | \$40 (to outsiders) |
| Variable costs per battery | \$18 |
| Fixed costs per battery | \$7 (at 300,000 units) |

- The Battery division is currently selling 150,000 batteries to outsiders at \$40. The Auto Division can use 100,000 of these batteries in its X-7 model. It can purchase them for \$38 from an outside supplier.

What is the optimal transfer price?

BUSI 1005 W2013

Scenario II: Excess Capacity

Transfer price = Additional outlay cost per unit incurred because goods are transferred + Opportunity cost per unit to the organization because of the transfer

Transfer price = \$18 variable cost per battery + \$0

Transfer price = \$18 per battery
 Optimal TP is lower BUSI 1005 W2013

Scenario II: Excess Capacity

When the selling division is operating below capacity, the **minimum** transfer price is the variable cost per unit.

So, the transfer price will be no lower than \$18, and no higher than \$40.

BUSI 1005 W2013

Scenario II: Excess Capacity

BUSI 1005 W2013

Setting Transfer Prices

The value placed on transfer goods is used to make it possible to transfer goods between divisions while allowing them to retain their autonomy. **What is autonomy?**

Setting Transfer Prices

Conflicts may be resolved by . . .

1. Direct intervention by top management.
2. Centrally established transfer price policies.
3. **Negotiated transfer prices.**
4. **Market based pricing**

Setting Transfer Prices (cont'd)

Top management may become swamped with pricing disputes causing division managers to lose autonomy.

Undermining Divisional Autonomy

Transfer prices are used in a decentralized environment where managers have authority to make decisions and control operations.

When disputes arise, top management should step aside and let the division managers resolve the issues. Intervention would decrease the divisional autonomy. However, sometimes upper mgmt. steps in. When?

BUSI 1005 W2013

An International Perspective

Since tax rates and import duties are different in different countries, companies have incentives to set transfer prices that will:

1. Increase revenues in low-tax countries.
2. Increase costs in high-tax countries.
3. Reduce cost of goods transferred to high-import-duty countries.

WE COVER INTERNATIONAL TRANSFER PRICING IN BUSI 3008.

BUSI 1005 W2013

Chapter 13

BUSI 1005 W2013

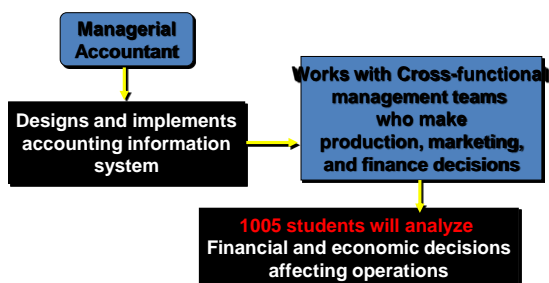

**Decision Making:
Relevant Costs
and Benefits**

Learning Objectives

1. **Identify** relevant costs and benefits, giving proper treatment to sunk costs, opportunity costs, and unit costs.
2. **Prepare** analyses of various special decisions: Keep or replace equipment, special order, make or Buy -properly identifying the relevant costs and benefits.
3. **Analyze** manufacturing decisions involving joint products and limited resources.

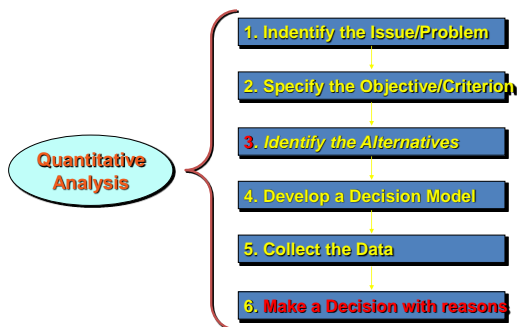

BUSI 1005 W2013

The Managerial Accountant's Role in Decision Making

BUSI 1005 W2013

The Decision-Making Process (CTI)

BUSI 1005 W2013

Relevant Information

Information is relevant to a decision problem when . . .

1. It has a bearing on the future, &
2. It differs among competing alternatives.

BUSI 1005 W2013

Opportunity cost:

is the cost of a forgone alternative.

These costs are **relevant** in the decision-making process.

Sunk costs

Costs that have already been incurred. They do not affect any future cost and cannot be changed by any current or future action.

Sunk costs are **not relevant** to decisions

BUSI 1005 W2013

Relevant Costs

Worldwide Airways is thinking about replacing a three year old loader with a new, more efficient loader.

| | |
|---------------------------|------------|
| New loader | |
| List price | \$ 15,000 |
| Annual operating expenses | 45,000 |
| Expected life in years | 1 |
| Old loader | |
| Original cost | \$ 100,000 |
| Remaining book value | 25,000 |
| Disposal value now | 5,000 |
| Annual variable expenses | 80,000 |
| Remaining life in years | 1 |

BUSI 1005 W2013

Relevant Costs (cont'd)

If we keep the old loader, we will have depreciation costs of \$25,000. If we replace the old loader, we will write-off the \$25,000 when sold. There is no difference in the cost, so it is **not relevant**.

The \$5,000 proceeds will only be realized if we replace the old loader. This amount is **relevant**.

BUSI 1005 W2013

3 Columns Relevant Costs (cont'd)

| | Keep Old Loader | Replace Old Loader | Differential Cost to keep |
|----------------------------------|--------------------|-----------------------|---------------------------------|
| Depreciation of old loader | | | |
| Write-off of old loader | | | \$ - |
| Proceeds from sale of old loader | | (5,000) | 5,000 |
| Cost of new loader | | 15,000 | (15,000) |
| Operating costs | 80,000 | 45,000 | 35,000 |
| Total costs | \$ 80,000 | \$ 55,000 | \$ 25,000 |

operating costs, cost of new loader, and sale of old loader
Are relevant
Decision here would be to replace old loader, given the info.

BUSI 1005 W2013

1 column Relevant Costs (cont'd)

Here is an analysis that includes **only relevant Incremental/differential costs**: Note the answer is the same as previous slide

| | |
|------------------------------------|------------------|
| Incremental Benefit to replace | |
| Disposal value of old loader | 5,000 |
| Cost of the new loader | (15,000) |
| Savings in V. exp. from new loader | \$ 35,000 |
| Net effect | \$ 25,000 |

BUSI 1005 W2013

Accept or Reject a Special Order

- A travel agency offers Worldwide Airways \$150,000 for a round-trip flight from Hawaii to Japan on a jumbo jet.
- Worldwide usually gets \$250,000 in revenue from this flight.
- The airline is not currently planning to add any new routes and has two planes that are idle and could be used to meet the needs of the agency.
- The next screen shows cost data developed by managerial accountants at Worldwide.

BUSI 1005 W2013

Accept or Reject a Special Order: data

| Typical Flight Between Japan and Hawaii | | | |
|---|----|----------------|---------------|
| Revenue: | | | |
| Passenger | \$ | 250,000 | |
| Cargo | | <u>30,000</u> | |
| Total | | | \$ 280,000 |
| Expenses: | | | |
| Variable expenses | | 90,000 | |
| Allocated fixed expense | | <u>100,000</u> | |
| Total | | | 190,000 |
| Profit | \$ | | <u>90,000</u> |

Worldwide will save about **\$5,000** in reservation and ticketing costs if the charter is accepted.

BUSI 1005 W2013

Accept or Reject a Special Order: Incremental column only

| Assumes excess capacity | | |
|---------------------------|----------------|------------------|
| Special price for charter | | \$150,000 |
| Variable cost per flight | \$90,000 | |
| Reservation cost savings | <u>(5,000)</u> | |
| Variable cost of charter | | 85,000 |
| Contribution from charter | | <u>\$ 65,000</u> |

Since the charter will contribute to fixed costs and Worldwide has idle capacity, the company should accept the flight.

BUSI 1005 W2013

Accept or Reject a Special Order (cont'd)

What if Worldwide had **no excess capacity**? If Worldwide adds the charter, it will have to cut its **least profitable** route that currently contributes \$80,000 to fixed costs and profits. Should Worldwide still accept the charter?

BUSI 1005 W2013

**Accept or Reject a Special Order:
Incremental column only**

| Assumes no excess capacity | | |
|----------------------------|-----------|-------------|
| Special price for charter | | \$ 150,000 |
| Variable cost per flight | \$ 90,000 | |
| Reservation cost savings | (5,000) | |
| Variable cost of charter | 85,000 | |
| Opportunity cost: | | |
| Lost contribution on route | 80,000 | 165,000 |
| Total | | \$ (15,000) |

Worldwide has no excess capacity, so it should reject the special charter.

BUSI 1005 W2013

Accept or Reject a Special Order (cont'd)

With excess capacity . . .

- Relevant costs will usually be the variable costs associated with the special order.

Without excess capacity . . .

- Same as above, but opportunity cost of using the firm's facilities for the special order are also relevant.

BUSI 1005 W2013

Make-or-Buy Decision

Outsource a Product or Service

- An Ontario bakery has offered to supply the in-flight desserts for 21¢ each.
- Here are Worldwide's current cost for in flight desserts:

| | |
|-------------------------------|----------------|
| Variable costs: | |
| Direct material | \$ 0.06 |
| Direct labour | 0.04 |
| Variable overhead | 0.04 |
| Fixed costs: | |
| Supervisory salaries | 0.04 |
| Depreciation of equipment | 0.07 |
| Total cost per dessert | \$ 0.25 |

BUSI 1005 W2013

Outsource a Product or Service (cont'd)

Not all of the allocated fixed costs will be saved if Worldwide purchases from the outside bakery.

| | Current Cost/ Dessert | Cost of Outsourcing | Incremental Savings from Out. |
|------------------------|--------------------------|------------------------|----------------------------------|
| Variable costs: | | | |
| Direct material | \$ 0.06 | - | \$ 0.06 |
| Direct labour | 0.04 | - | 0.04 |
| Variable overhead | 0.04 | - | 0.04 |
| Fixed costs: | | | |
| Supervisory salaries | 0.04 | 0.03 | 0.01 |
| Equipment depreciation | 0.07 | 0.07 | - |
| Price to outsource | | 0.21 | (0.21) |
| Total cost per dessert | \$ 0.25 | \$ 0.31 | \$ (0.06) |

BUSI 1005 W2013

Outsource a Product or Service (cont'd)

If Worldwide purchases the dessert for 21¢, it will only save 15¢ so Worldwide will have a loss of 6¢ per dessert purchased.

BUSI 1005 W2013

Ch. 13 part II Learning Objectives

1. **Keep or drop** a business segment, subsidiary, division etc.
2. Analyze manufacturing decisions involving **joint products** and limited resources.
3. Decisions Involving **Limited Resources**

BUSI 1005 W2013

Add or Drop a Product

Worldwide Airways offers its passengers the opportunity to join its **World Express Club**. Club membership entitles a traveler to use the club facilities at the airport in Toronto.

Club privileges include a private lounge and restaurant, discounts on meals and beverages, and use of a small health spa.

BUSI 1005 W2013

Add or Drop a Product (cont'd)

| | | |
|----------------------------|----------|---------------------|
| Sales | | \$200,000 |
| Less: Variable Costs: | | |
| Food/Beverage | \$70,000 | |
| Personnel | 40,000 | |
| Variable overhead | 25,000 | (135,000) |
| Contribution Margin | | 65,000 |
| Less: Fixed Costs: | | |
| Depreciation | \$30,000 | |
| Supervisor salary | 20,000 | |
| Insurance | 10,000 | |
| Airport fees | 5,000 | |
| Allocated overhead | 10,000 | (75,000) |
| Loss | | \$ (10,000) |

If the spa is dropped depreciation, insurance, and allocated overhead remain

BUSI 1005 W2013

3 column: Add or Drop a Product (cont'd)

| | KEEP CLUB | ELIMINATE | DIFFERENTIAL |
|----------------------------|--------------------|-------------------|------------------|
| Sales | \$200,000 | 0 | \$200,000 |
| Food/Beverage | (70,000) | 0 | (70,000) |
| Personnel | (40,000) | 0 | (40,000) |
| Variable overhead | (25,000) | 0 | (25,000) |
| Contribution Margin | 65,000 | 0 | 65,000 |
| Depreciation | (30,000) | (30,000) | 0 |
| Supervisor salary | (20,000) | 0 | (20,000) |
| Insurance | (10,000) | (10,000) | 0 |
| Airport fees | (5,000) | 0 | (5,000) |
| Allocated overhead | (10,000) | (10,000) | 0 |
| Loss | \$ (10,000) | \$(50,000) | \$ 40,000 |

BUSI 1005 W2013

Add or Drop a Product (cont'd)

| | KEEP CLUB | ELIMINATE | DIFFERENTIAL |
|---------------------|-----------------|-----------------|---------------|
| Sales | \$200,000 | 0 | \$200,000 |
| Food/Beverage | (70,000) | 0 | (70,000) |
| Personnel | (40,000) | 0 | (40,000) |
| Variable overhead | (25,000) | 0 | (25,000) |
| Contribution Margin | 65,000 | 0 | 65,000 |
| Depreciation | (30,000) | (30,000) | 0 |
| Supervisor salary | (20,000) | 0 | (20,000) |
| Insurance | (10,000) | (10,000) | 0 |
| Airport fees | (5,000) | 0 | (5,000) |
| Allocated overhead | (10,000) | (10,000) | 0 |
| Loss | (10,000) | (50,000) | 40,000 |

The positive \$40,000 differential amount reflects the fact that the company is \$40,000 better off by keeping the club.

BUSI 1005 W2013

Add or Drop a Product (cont'd)

| | KEEP CLUB | ELIMINATE | DIFFERENTIAL |
|------------------------------|------------------|-----------|------------------|
| Sales | \$200,000 | 0 | \$200,000 |
| Food/Beverage | (70,000) | 0 | (70,000) |
| Personnel | (40,000) | 0 | (40,000) |
| Variable overhead | (25,000) | 0 | (25,000) |
| Contribution Margin | 65,000 | 0 | 65,000 |
| Avoidable fixed costs | | | |
| Supervisor salary | (20,000) | 0 | (20,000) |
| Airport fees | (5,000) | 0 | (5,000) |
| Profit/Loss | \$ 40,000 | | \$ 40,000 |

Worldwide airlines would also lose the contribution margin of \$65,000. However, would save the avoidable fixed costs. Still it is better to keep club by \$40,000.

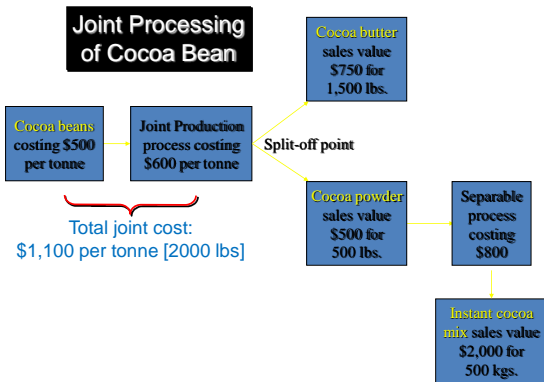

BUSI 1005 W2013

More Decisions in Manufacturing Firms

Joint Products: Sell or Process Further

A joint production process resulting in two or more products. The point in the production process where the joint products are identifiable as separate products is called the split-off point.

BUSI 1005 W2013

BUSI 1005 W2013

Joint Products

Relative Sales Value Method

| Joint Costs | Joint Products | Sales Value at Split-Off | Relative Proportion | Allocation of Joint Costs |
|-------------|----------------|--------------------------|---------------------|---------------------------|
| \$ 1,100 | Cocoa Butter | \$ 750 | 60% | \$ 660 |
| | Cocoa Powder | 500 | 40% | 440 |
| | | \$ 1,250 | 100% | \$ 1,100 |

$$\$750 \div \$1,250 = 60\%$$

$$60\% \times \$1,100 = \$660$$

BUSI 1005 W2013

Joint Products (cont'd)

- Cocoa butter is sold at the end of the joint processing.
- Cocoa powder may be sold now or processed into instant cocoa mix. Further processing costs of \$800 will be incurred if the company elects to make instant cocoa mix.

BUSI 1005 W2013

Joint Products (cont'd)

| Process Further | |
|-----------------------------------|----------|
| Sales value of instant cocoa mix | \$ 2,000 |
| Sales value of cocoa powder | (500) |
| Incremental revenue | \$ 1,500 |
| Less: separable processing costs | (800) |
| Net benefit of further processing | \$ 700 |

The cocoa powder should be processed into instant cocoa mix.

Decisions Involving Limited Resources

Martin, Inc. produces two products and selected data is shown below:

| | Products | |
|--|-----------|-----------|
| | Webs | Highs |
| Selling price per unit | \$ 60 | \$ 50 |
| Less: variable expenses per unit | 36 | 35 |
| Contribution margin per unit | \$ 24 | \$ 15 |
| Current demand per week (units) | 2,000 | 2,200 |
| Contribution margin ratio | 40% | 30% |
| Processing time required on the lathe per unit | 1.00 min. | 0.50 min. |

BUSI 1005 W2013

Decisions Involving Limited Resources (cont'd)

- The lathe is the scarce resource. The lathe is being used at 100% of its capacity.
- The lathe capacity is 2,400 minutes per week.

Should Martin focus its efforts on Webs or Highs?

BUSI 1005 W2013

Decisions Involving Limited Resources (cont'd)

Let's calculate the contribution margin per unit of the scarce resource, the lathe.

| | Products | |
|-----------------------------------|-------------------|-------------------|
| | Webs | Highs |
| Contribution margin per unit | \$ 24 | \$ 15 |
| Time required to produce one unit | 1.00 min. | 0.50 min. |
| Contribution margin per minute | <u>\$ 24 min.</u> | <u>\$ 30 min.</u> |

Highs should be emphasized. It is the more valuable use of the scarce resource, the lathe, yielding a contribution margin of \$30 per minute as opposed to \$24 per minute for the Webs. If there are no other considerations, the best plan would be to produce to meet current demand for Highs and then use remaining capacity to make Webs.

BUSI 1005 W2013

Decisions Involving Limited Resources (cont'd)

Let's see how this plan would work.

| Allotting the Scarce Resource – The Lathe | |
|---|----------------------|
| Weekly demand for Highs | 2,200 units |
| Time required per unit | x .50 minutes |
| Time required to make Highs | <u>1,100 minutes</u> |
| | |
| Total lathe time available | 2,400 minutes |
| Time used to produce Highs | 1,100 minutes |
| Time available for Webs | 1,300 minutes |
| Time required per unit | x 1.00 minute |
| Production of Webs | <u>1,300 units</u> |

BUSI 1005 W2013

Decisions Involving Limited Resources (cont'd)

According to the plan, Martin will produce 2,200 Highs and 1,300 Webs. Martin's contribution margin looks like this:

| | Webs | Highs |
|------------------------------|-----------|-----------|
| Production and sales (units) | 1,300 | 2,200 |
| Contribution margin per unit | \$ 24 | \$ 15 |
| Total contribution margin | \$ 31,200 | \$ 33,000 |

The total contribution margin for Martin, Inc. is \$64,200. Any other combination would result in less contribution.

Ch 15 - Capital Investments (L/T)*

Calculating Present Values

- the issue: comparing cash flows today with cash flows in the future
- the solution: bring all cash flows to the same point in time, i.e. today, $t=0$

Present Values- 1 cash flow

- you expect to receive \$100,000 in 20 years time, how much is this worth today[i.e., now] at 8%?
FV = \$100,000
i = 8
n = 20
Solve for PV

Present Value of an Annuity multiple cash flows

- you just won the cash for life lottery, it will pay you \$75,000 per year for the next 45 years. How much is it worth now if the interest rate is 6%?
PMT = 75000
i = 6
n = 45
Solve for PV

Net present value

- discount all future cash flows at the company's **required rate of return (always given)** and compare to the initial cash outflow
 - net present value (NPV)= - Initial Investment + PV of future cash flows
 - If NPV > 0, the projects adds value and should be accepted
 - If NPV < 0, the project does not return the **required rate of return** and **should be rejected**
- working capital investments: treat as cash **outflows** when investment is made, cash inflows when recovered (usually cash inflows at the end of a project)

PROS

Gives an absolute \$ amount to compare to other investments

Easy to use

Easy to adjust for risk of project

Used in practice
