ENGR 242/2 STATICS, Section X, Fall 2001

Test #1

Attempt all questions. Only non-programmable calculators are permitted. Time: 60 minutes.

Marks: 10 points per problem (Total is 30).

1. In Figure 1 below, if the crate has a weight of 100 N, determine the magnitude of the tension in cable CD and the angle θ.

2. In Figure 2 below, the hood of the automobile is supported by the strut AB, which exerts a force of F = 24 N on the hood. Determine the moment of this force about the hinged axis y.

3. Two forces F_1 (50 N) and F_2 (40 N) act as shown in Figure 3 below.
   (a) Replace the forces with an equivalent force-couple system at the origin.
   (b) Determine the magnitude and the direction cosines of the resultant force.

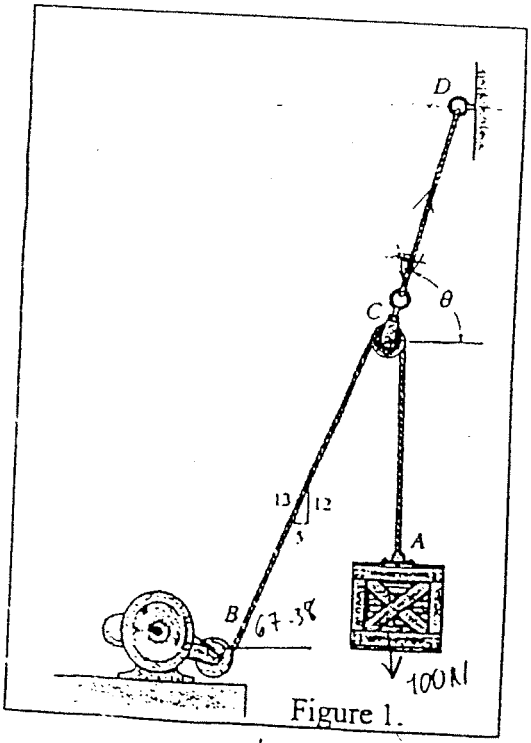

Figure 1.

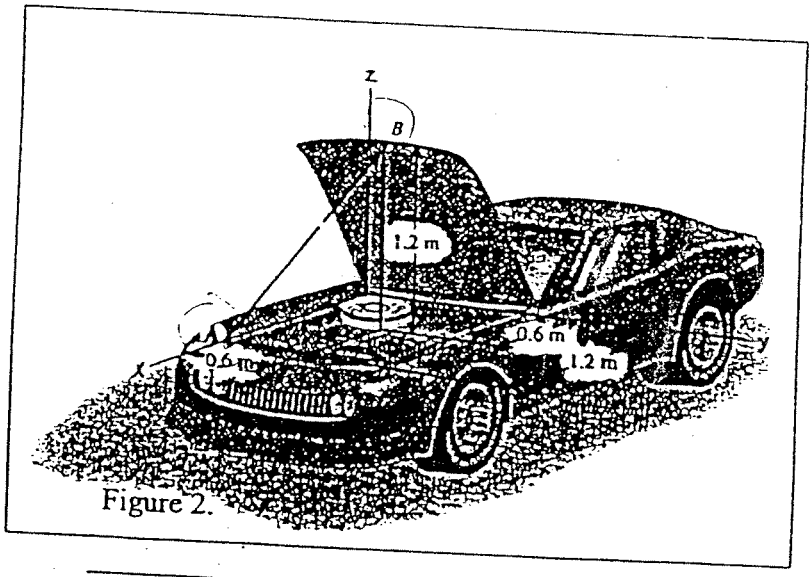

Figure 2.

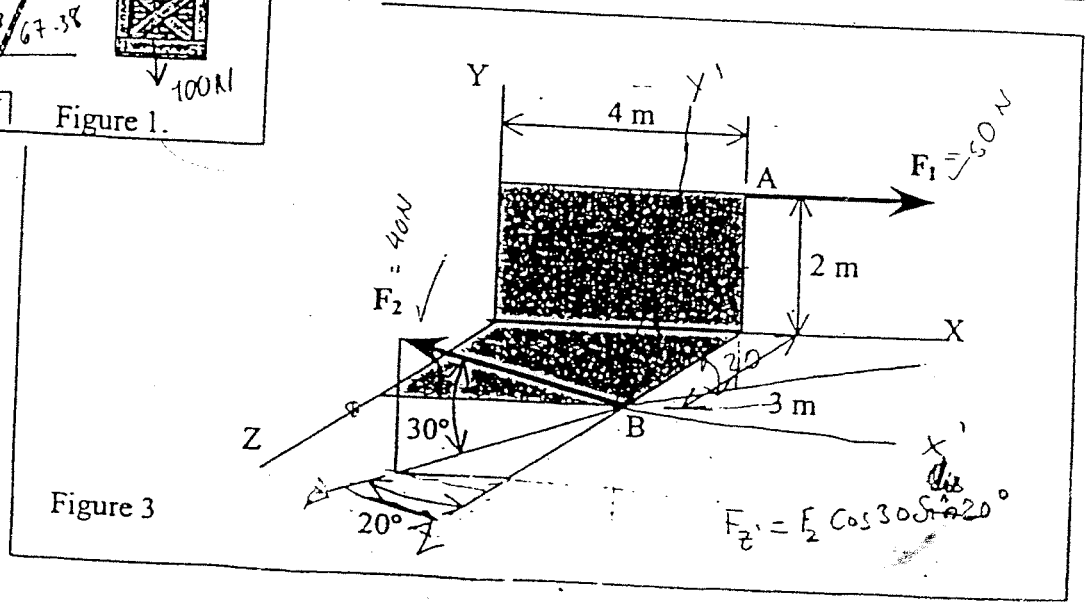

Figure 3

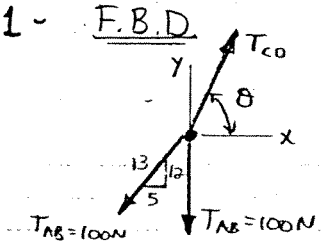
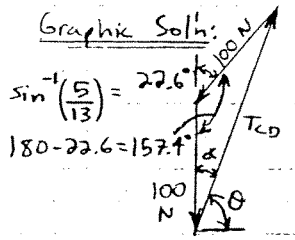
$F_{z'} = F_2 \cos 30 \sin 20°$

Solution Test #1 — ENGR-242, Section X, October 2001

#1 - F.B.D



Graphic Soln:



By the law of cosines:

$$T_{CD} = \sqrt{100^2 + 100^2 - 2\times 100^2 \cos 157.4^\circ} = 1$$

By the law of sines:

$$\frac{\sin\alpha}{100} = \frac{\sin 157.4^\circ}{196}$$

$\alpha = 11.3^\circ \rightarrow \theta = 90^\circ - 11.3^\circ$

$T_{CD} = 1$
$\theta = 7$

#2 - In Vector form:

$$\vec{F} = F\,\vec{\lambda}_{BIA} = F\,\frac{\vec{r}_{BIA}}{r_{BIA}} = 24\,[N]\,\frac{(-0.6\vec{i} + 0.6\vec{j} + 1.2\vec{k})\,[m]}{\sqrt{0.6^2 + 0.6^2 + 1.2^2}\,[m]} = -9.8\vec{i} + 9.8\vec{j} + 19$$

Moment of F about y:

$$M_y = \vec{j}\cdot(\vec{r}_A \times \vec{F}) = \begin{vmatrix} 0 & 1 & 0 \\ 1.2 & 0 & 0 \\ -9.8 & 9.8 & 19.6 \end{vmatrix} \Longrightarrow \boxed{M_y = -23.52\ N\cdot m}$$

#3 -a) Vector Forces:

$$\vec{F}_2 = 40\,[N]\,(-\cos 30^\circ \sin 20^\circ \vec{i} + \sin 30^\circ \vec{j} + \cos 30^\circ \sin 20^\circ \vec{k}$$
$$= -11.8\vec{i} + 20\vec{j} + 32.6\vec{k}\ [N]$$
$$\vec{F}_1 = 50\vec{i}\ [N]$$

Resultant force at O: $\vec{R} = \Sigma\vec{F} \longrightarrow \boxed{\vec{R} = 38.2\vec{i} + 20\vec{j} + 32.6\vec{k}\ [N]}$

Moments of Each Force about O:

$$\vec{M}_1 = \vec{r}\times\vec{F}_1 = (2\vec{j})\times(50\vec{i}) = -100\vec{k}\ [N\cdot m]$$
$$\vec{M}_2 = \vec{r}_B \times \vec{F}_2 = (4\vec{i} + 3\vec{k})\times(-11.8\vec{i} + 20\vec{j} + 32.6\vec{k}) = -60\vec{j} - 165.8\vec{j} +$$ [illegible] $N\cdot$

Resultant moment at O: $\vec{M}_o = \Sigma\vec{M} \rightarrow \boxed{\vec{M}_o = -60\vec{i} - 165.8\vec{j} - 20\vec{k}\ [N\cdot m]}$

b) $R = \sqrt{38.2^2 + 20^2 + 32.6^2} \Longrightarrow \boxed{R = 54.1\ N}$

$\cos\theta_x = R_x/R = 38.2/54.1 \Longrightarrow \theta_x = 45.0^\circ$
$\cos\theta_y = R_y/R = 20/54.1 \Longrightarrow \theta_y = 68.3^\circ$
$\cos\theta_z = R_z/R = 32.6/54.1 \Longrightarrow \theta_z = 52.9^\circ$

F02/1

ENGR 242/2 STATICS, Section X, Fall 2002

Test #1

Attempt all questions. Only non-programmable calculators are permitted. Time: 60 minutes.

Marks: 10 points per problem (Total is 30).

1. In Figure 1 below, three cables are jointed at the junction ring C. Determine the tensions in cables AC and BC caused by the weight of the 30-kg cylinder.

2. In Figure 2 below, the rectangular plate is supported by hinges along its side BC and by the cable AE. If the cable tension is 300 N, determine the moment of the force about the axis of the hinges. Note that E is the midpoint of the horizontal upper edge of the structural support.

3. In Figure 3 below, a motor with a weight of 32 N is mounted on the floor. Find the resultant of the weight and the forces exerted on the belt, and determine where the line of action of the resultant intersects the floor.

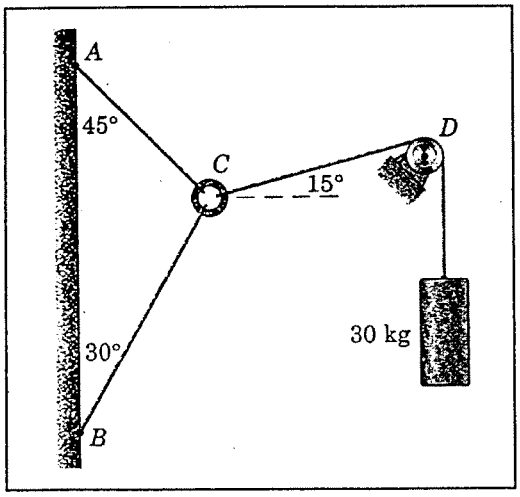

Figure 1

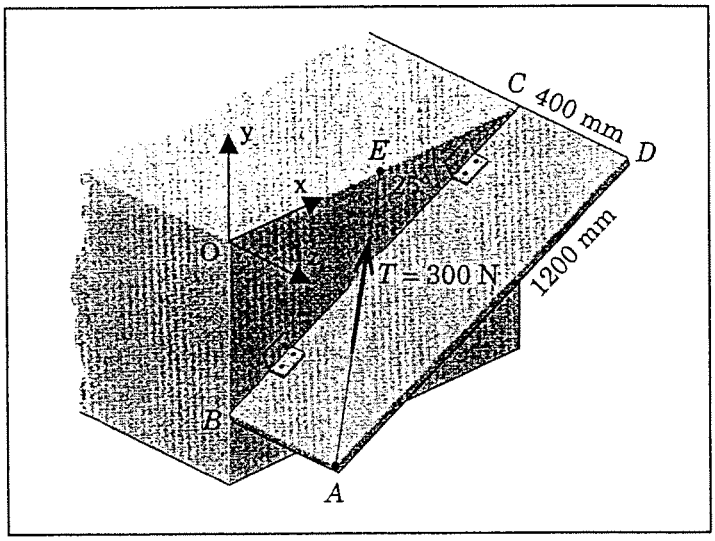

Figure 2

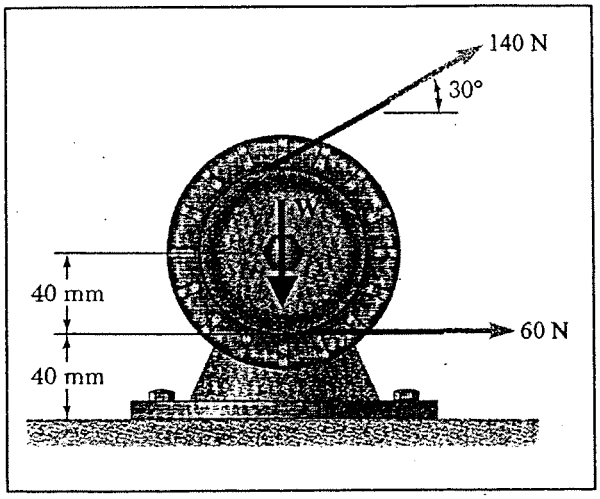

Figure 3

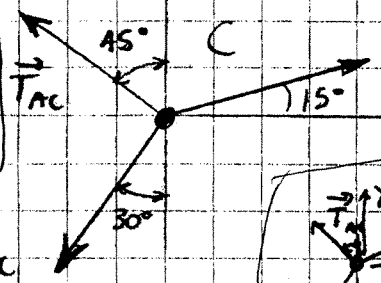
Solution Test #1 - 2002 (10 pts) F02/2

/ = evaluation system.

#1.

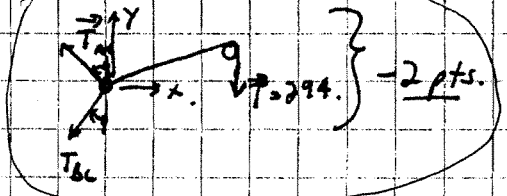
FBD



4 pts FBD.
- 1 pt. All 3 forces shown
- 1 pt. angles
- 1 pt. coordinate axes.
- 1 pt. Identify forces.

$T = 30\ kg * 9.81\ m/s^2$

$T = 294\ N.$ (1 pt. to find T)



-2 pts.

1st approach:

1.5 pt Equation

$\Sigma F_x = -T_{AC}\frac{\sin 45°}{\sin 45°} - T_{BC}\frac{\sin 30°}{\sin 45°} + 294\frac{\cos 15°}{\sin 45°} = 0$ (0.5. | 0.5 | 0.5 if correct)

$T_{AC} = -0.7071\,T_{BC} + 401.6$

1.5 pt Equation

$\Sigma F_y = T_{AC}\cos 45° - T_{BC}\cos 30° + 294\sin 15° = 0.$

$0.7071(-0.7071\,T_{BC} + 401.6) - 0.8660\,T_{BC} + 76.09 = 0$

$-0.5\,T_{BC} + 284.0 - 0.866\,T_{BC} + 76.09 = 0$

$1.366\,T_{BC} = 360$

1 pt. For solving 2 equations, 2 unknowns.

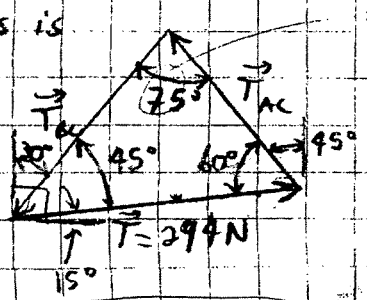
1 pt. Solution and units.

$$\boxed{\begin{aligned} T_{BC} &= 264\ N \\ T_{AC} &= 215\ N \end{aligned}}$$

5

2nd approach: Graphically.

The sum of the three vectors is zero.



2 pts. Force triangle and angles

$= 180° - 45° - 60°$

By Sine Law:

$\frac{294}{\sin 75°} = \frac{T_{AC}}{\sin 45°} = \frac{T_{BC}}{\sin 60°}$

2 pt: Sine law Equation

$$\boxed{\begin{aligned} T_{AC} &= 215\ N \\ T_{BC} &= 264\ N \end{aligned}}$$

1 pt: Solution and units.

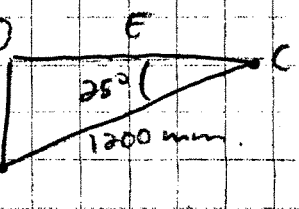
5

Solution Test #1 - 2002 (10 pts) Pg 1/3

#2.

Force T as vector:

1 pt. to find OC, OE



$OB = 1200 * \sin 25° = 507$ mm
$OC = 1200 * \cos 25° = 1089$ mm
$OE = OC = 545$ mm

pt. A = (0, −507, 400) mm
pt. E = (545, 0, 0)
pt. B = (0, −507, 0)
pt. C = (1089, 0, 0)

1 pt. fn equation

Let position vector $\vec{r}_{E/A}$

$$\vec{T} = T\vec{\lambda}_T = T\frac{\vec{r}_{E/A}}{r_{E/A}} = 300\,[N]\,\frac{(545\vec{i} + 507\vec{j} - 400\vec{k})\,[mm]}{\sqrt{545^2 + 507^2 + 400^2}\,[mm]}$$

$\sqrt{\quad} \approx 845$ mm

1 pt. Force vector: $\vec{T} = 193\vec{i} + 180\vec{j} - 142\vec{k}$ [N]

Unit vector along BC

1 pt. Fn equation
1 pt. fn unit vector

$$\vec{\lambda}_{BC} = \frac{\vec{r}_{C/B}}{r_{C/B}} = \frac{(1089\vec{i} + 507\vec{j} + 0\vec{k})}{\sqrt{1089^2 + 507^2}} = 0.9066\vec{i} + 0.4221\vec{j}$$

$\sqrt{\quad} \approx 1201$

Position vector from B to A

1 pt. position vector: $\vec{r}_{A/B} = (0\vec{i} + 0\vec{j} + 400\vec{k})$ mm or $\vec{r}_{E/B}$ or $\vec{r}_{A/C}$ or $\vec{r}_{E/C}$

The mixed triple product

Alternate approach: compute $\vec{M}_B = \vec{r}_{A/B} \times \vec{T}$ then $M = \vec{M}_B \cdot \vec{\lambda}_{BC}$

1 pt. equation

$$M = \vec{\lambda}_{BC} \cdot (\vec{r}_{A/B} \times \vec{T}) = \begin{vmatrix} 0.9066 & 0.4221 & 0 \\ 0 & 0 & 400 \\ 193 & 180 & -142 \end{vmatrix}$$

(−ve) (+ve)

$$\begin{matrix} 0.9066 & 0.4221 \\ 0 & 0 \\ 193 & 180 \end{matrix}$$

2 pts Finding determinant.

$$= 32\,586 - 62\,275 = -32\,689 \text{ N·mm}$$

1 pt. Solution and Units: $M = -32.7$ N·m

↳ No point if M Vector form.

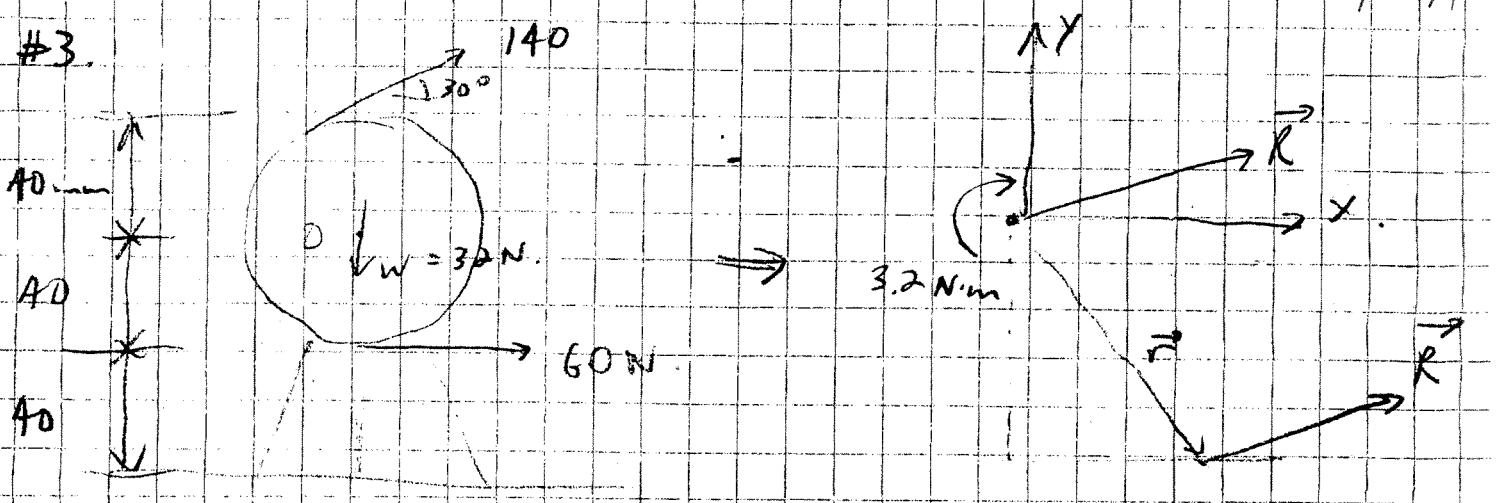
Solution

Test #1 - 2002

(10 pts)

702/4

#3.



Equivalent force-couple system at O.

(2 pts) $\vec{R} = \Sigma \vec{F} = -32\vec{j} + 60\vec{i} + (140\cos 30°\,\vec{i} + 140\sin 30°\,\vec{j})$ (0.5, 0.5, 0.8, 0.5)

(Let) $\vec{R} = 181\vec{i} + 38\vec{j}$ N.

(2 pts) $\vec{M}_R^O = \Sigma(\vec{r}\times\vec{F}) = 0.04 * (60 - 140)\,\vec{k} = -3.2\,\vec{k}$ N·m (0.5, 0.5, 1)

Move resultant on floor to cancel moment.

(1 pt for $\vec{r}$) $\vec{r} = (x\vec{i} - 0.08\vec{j})$ m.

(Let equation) $\vec{M}_R^O = \vec{r}\times\vec{R} =$

	$\vec{i}$	$\vec{j}$	$\vec{k}$	$\vec{i}$	$\vec{j}$
	x	-0.08	0	x	-0.08
	181	38	0	181	38

(-ve)

$= 38x\,\vec{k} + 14.48\,\vec{k} = -3.2\,\vec{k}$

(2 pts) Finding determinant and equal to previous moment found

$+38x = -17.68$

$x = -0.465$ m

(1 pt. answer and units) $x = -465$ mm

Resultant will be 465 mm to the left of pt O on floor.

Fall 02 / 1a

ENGR 242/2 STATICS, Section X, Fall 2002

Test #2

Attempt all questions. Only non-programmable calculators are permitted. Time: 60 minutes.

Marks: 10 points per problem (Total is 30).

1. Determine the tension in cables BC and BD and the reactions at the ball-and-socket joint A for the mast shown in Figure 1 below.

2. The 3-m-wide rectangular gate is pinned at its center C. Determine the torque M that must be applied to its central shaft in order to open the gate. Specific weight of water: $\gamma_w = 9810\ \text{N/m}^3$.

3. For the plane area shown in Figure 3 below, determine
   (a) the first moments of area with respect to the X and Y axes,
   (b) the location of the centroid, and
   (c) the volume of the body of revolution obtained by rotating the area about the X axis.

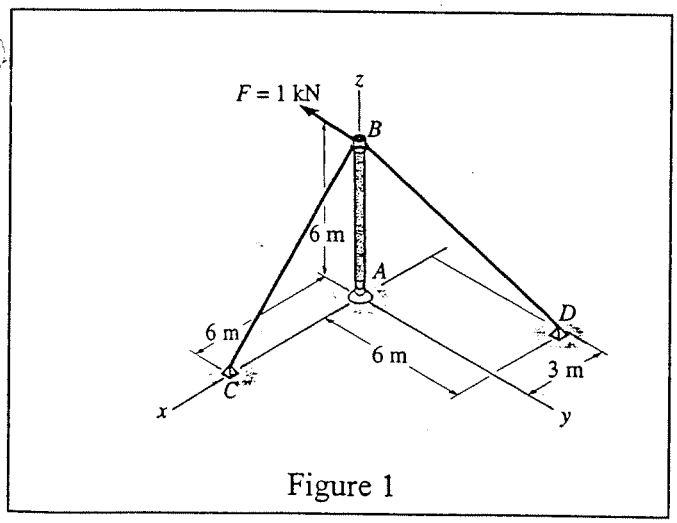

Figure 1

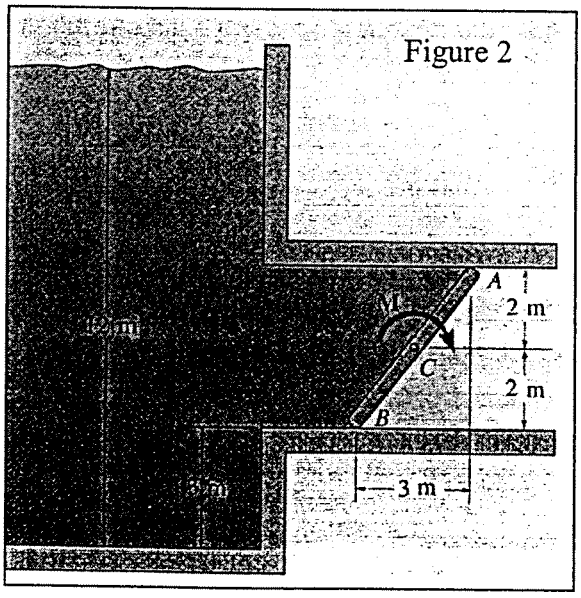

Figure 2

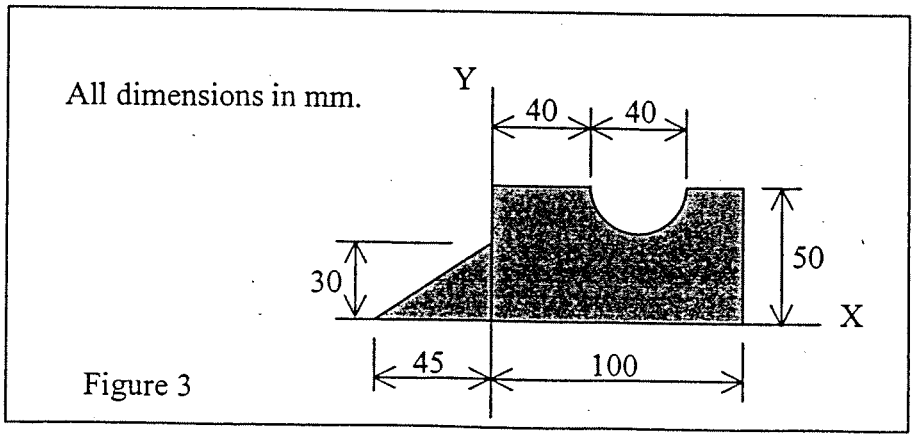

Figure 3

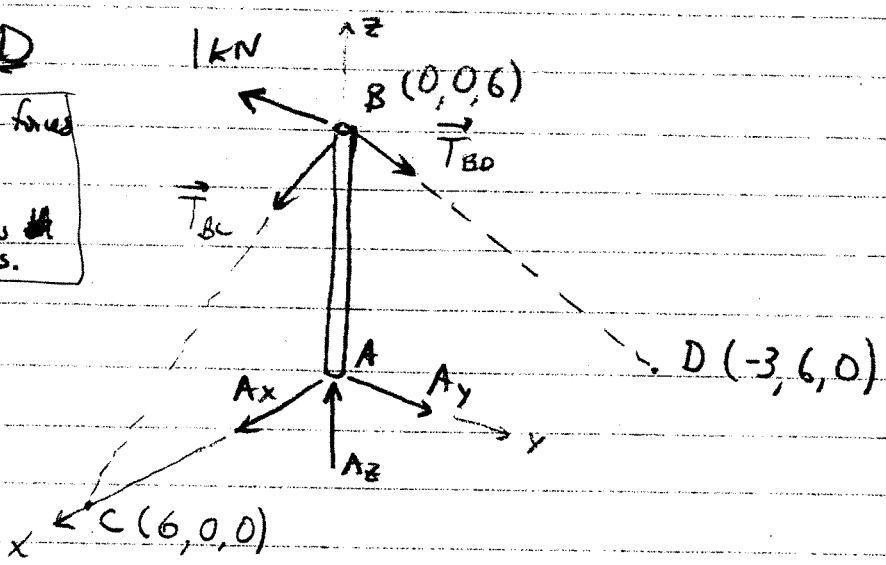
ENGR-242 Test #2 F02/2a Oct. 25, 2002.

#1.

FBD

3 Reaction forces
Axes.
Dimensions & or coords.



Define the tension forces as vectors.

(1) $\vec{T}_{BD} = T_{BD}\,\frac{\vec{r}_{DB}}{r_{DB}} = T_{BD}\,\frac{(-3\vec{i}+6\vec{j}-6\vec{k})}{\sqrt{3^2+6^2+6^2}} = T_{BD}\left(-\frac{1}{3}\vec{i}+\frac{2}{3}\vec{j}-\frac{2}{3}\vec{k}\right)$ (9)

(1) $\vec{T}_{BC} = T_{BC}\,\frac{\vec{r}_{CB}}{r_{CB}} = T_{BC}\,\frac{(6\vec{i}+0-6\vec{k})}{\sqrt{6^2+6^2}} = T_{BC}\left(0.707\vec{i}-0.707\vec{k}\right)$ (8.485)

Find reactions:

(1) $\circlearrowleft +\Sigma M_{@A} = A_x = 6*1 - 6*(T_{BD})_y = 0$ $\quad\Rightarrow\quad \boxed{T_{BD} = 1.5\ kN.}$

$\circlearrowleft +\Sigma M_{@A} = A_y = 6*(T_{BC})_x - 6*(T_{BD})_x = 0$

(1) $\hookrightarrow\ (T_{BC})_x = (T_{BD})_x$

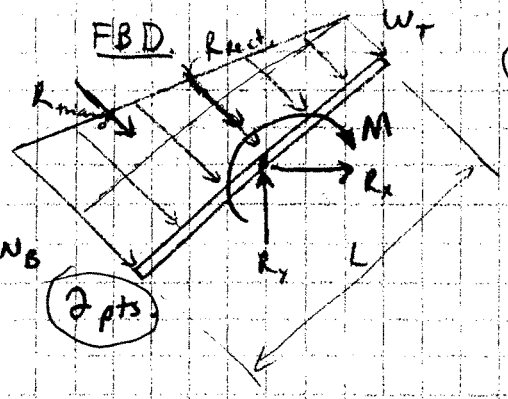
$0.707\,T_{BC} = 0.333*1.5 \rightarrow \boxed{T_{BC} = 0.707\ kN}$

(1) $\Sigma F_x = A_x + 0.707\,T_{BC} - \frac{T_{BD}}{3} = 0$ $\quad\Rightarrow\quad A_x = 0\ kN$

(1) $\Sigma F_y = A_y - 1 + \frac{2}{3}T_{BD} = 0$ $\quad\Rightarrow\quad A_y = 0.\ kN$

(1) $\Sigma F_z = A_z - 0.707\,T_{BC} - \frac{2}{3}T_{BD} = 0$ $\quad\Rightarrow\quad A_z = 1.5\ kN$

#2.



(1 pt) When M is about to open the gate, the walls of the pipe do not exert any reactions.

(1 pt. Eqv.) $W_T = \gamma h_T b = 9810 \left[\frac{N}{m^3}\right] * (12-7)\,[m] * 3\,[m]$

$W_T = 147.5\ kN/m$ (1 pt.)

$W_B = 9810 * (12-3) * 3 = 264.9\ kN/m$ (1 pt.)

Length of gate: $L = \sqrt{3^2 + 4^2} = 5\ m$ (1 pt.)

$\circlearrowleft + \Sigma M_D C = -M + \underbrace{(W_B - W_T) * \frac{L}{2}}_{R_{triangle}} * \left(\frac{L}{2} - \frac{L}{3}\right) = 0$ (1 pt.) (1 pt.)

$\circlearrowleft + \Sigma M_C = 0$

$M = (264.9 - 147.5)\left[\frac{kN}{m}\right] * \frac{5}{2}\,[m] * \overbrace{\left(\frac{5}{2} - \frac{5}{3}\right)}^{2.0833..}\,[m]$

$\boxed{M = 245\ kN.m}$ (1 pt.)

Solution Test #2 — ENGR-242, Section X, Oct. 2001

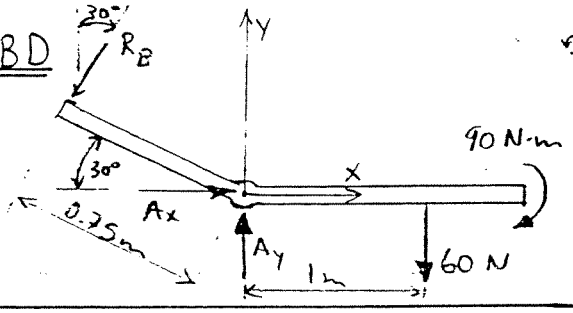
#1- Equivalent force-couple system at origin:

$$R = \Sigma F = 20 + 50 + 30 + 40 \longrightarrow R = 140\ N.$$

$$M_x^R = \Sigma_{y_F} F = -0\cdot 20 - 3\cdot 50 - 11\cdot 30 - 13\cdot 40 = -1000\ N\cdot m = yR \longrightarrow y = \frac{-1000}{-140} = 7.14\ m$$

$$M_y^R = \Sigma_{x_F} F = -10\cdot 20 - 4\cdot 50 - 0\cdot 30 - 10\cdot 40 = -800\ N\cdot m = xR \longrightarrow x = \frac{-800}{-140} = 5.71\ m$$

#2- FBD

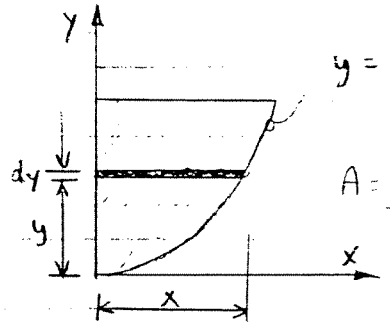


$$\circlearrowleft \Sigma M_{@A} = 0.75\,R_B - 1\times 60 - 90 = 0 \rightarrow R_B = 200\ N$$

$$\Sigma F_x = A_x - \sin 30^\circ R_B = 0 \longrightarrow A_x = 100\ N$$

$$\Sigma F_y = A_y - \cos 30^\circ R_B - 60 = 0 \rightarrow A_y = 233\ N$$

#3-



$y = kx^3$ at $x = a,\ y = h \longrightarrow k = \frac{h}{a^3}$

$\therefore\ y = \frac{h}{a^3}x^3$ or $x = \frac{a}{\sqrt[3]{h}}\sqrt[3]{y}$

$A = \int dA$

$dA = x\,dy = \frac{a}{\sqrt[3]{h}}\sqrt[3]{y}\,dy$

$$A = \int dA = \frac{a}{\sqrt[3]{h}}\int_0^h y^{1/3}\,dy = \frac{a}{\sqrt[3]{h}}\,y^{4/3}\cdot\frac{3}{4}\Big|_0^h = \frac{3}{4}ah \checkmark$$

1st Moment of area about X:

$$Q_x = \int y_{el}\,dA = \frac{a}{\sqrt[3]{h}}\int_0^h y^{4/3}\,dy = \frac{a}{\sqrt[3]{h}}\,y^{7/3}\cdot\frac{3}{7}\Big|_0^h = \frac{3}{7}ah^2$$

1st Moment of area about Y:

$$Q_y = \int x_{el}\,dA = \int_0^h \frac{x}{2}\,x\,dy = \frac{a^2}{2h^{2/3}}\int_0^h y^{2/3}\,dy = \frac{a^2}{2h^{2/3}}\,y^{5/3}\cdot\frac{3}{5}\Big|_0^h = \frac{3a^2h}{10}$$

$$\bar{x} = \frac{Q_y}{A} = \frac{3a^2h}{10}\cdot\frac{4}{3ah} \longrightarrow \boxed{\bar{x} = \frac{2}{5}a}$$

$$\bar{y} = \frac{Q_x}{A} = \frac{3ah^2}{7}\cdot\frac{4}{3ah} \longrightarrow \boxed{\bar{y} = \frac{4}{7}h}$$

EXAMINATION	**DATE**	**TIME**	**# OF PAGES**
Final	December 15, 1984	9:30 - 12:30	3
INSTRUCTOR		**DIVISION**	
Profs. Douglass, Goldman, Stathopoulos, Troitsky & Zielinski		Day and Evening	

MATERIALS ALLOWED:

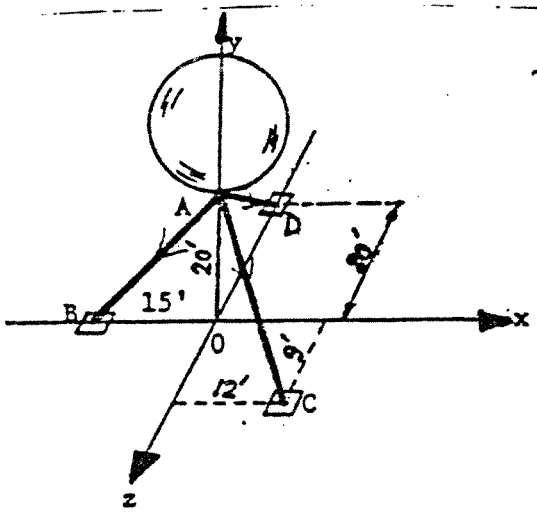
Any calculating device

SPECIAL INSTRUCTIONS:

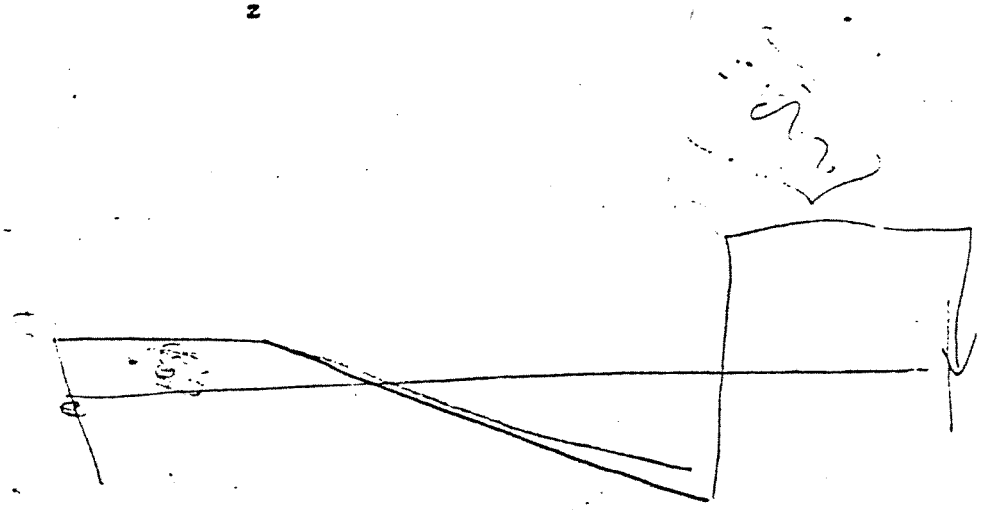
Do any five questions. Only the first five problems presented will be graded.

All questions carry equal weight.

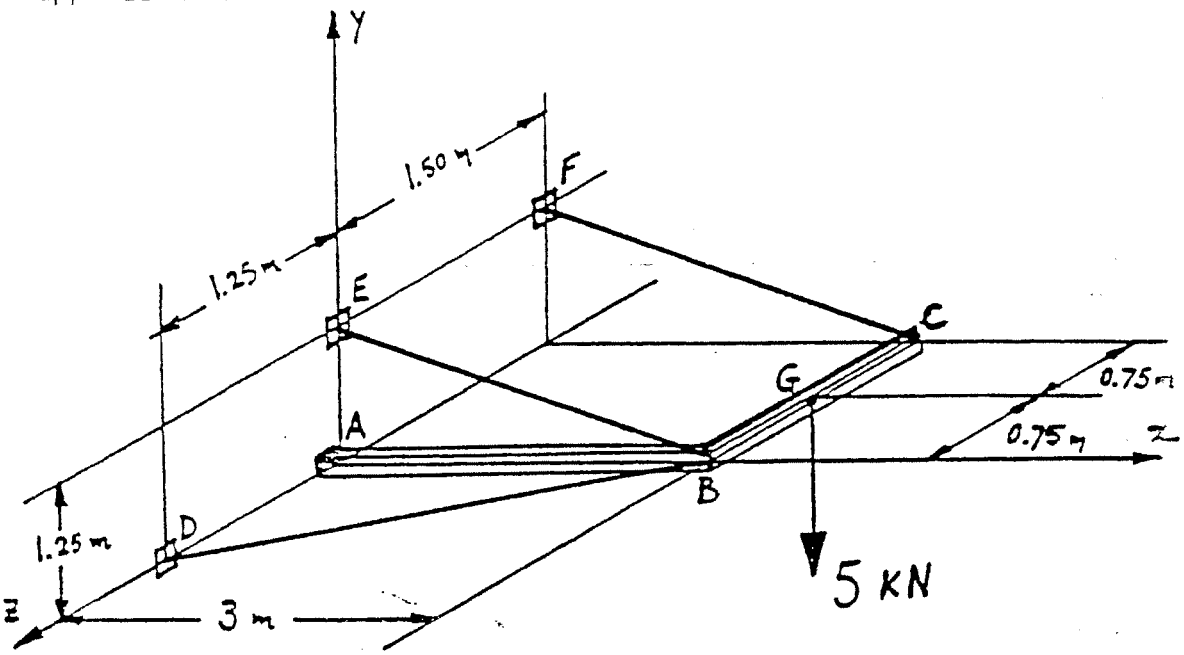
1. A balloon is held by three cables as shown. If the tension of cable AC is 2500 lb., what is the total lift force provided by the balloon?



$T_B = 5367.5$



2. The rigid L-shaped member ABC is supported by a ball and socket at A and by the three cables BD, BE and CF as shown. Determine the tension in each cable and the reaction components at A caused by the 5-KN force applied at G.



3) For the cross-hatched area shown:

a) Locate the centroid with respect to the OX axis.
b) What is the volume generated if this area is rotated 100 degrees about the OX axis?

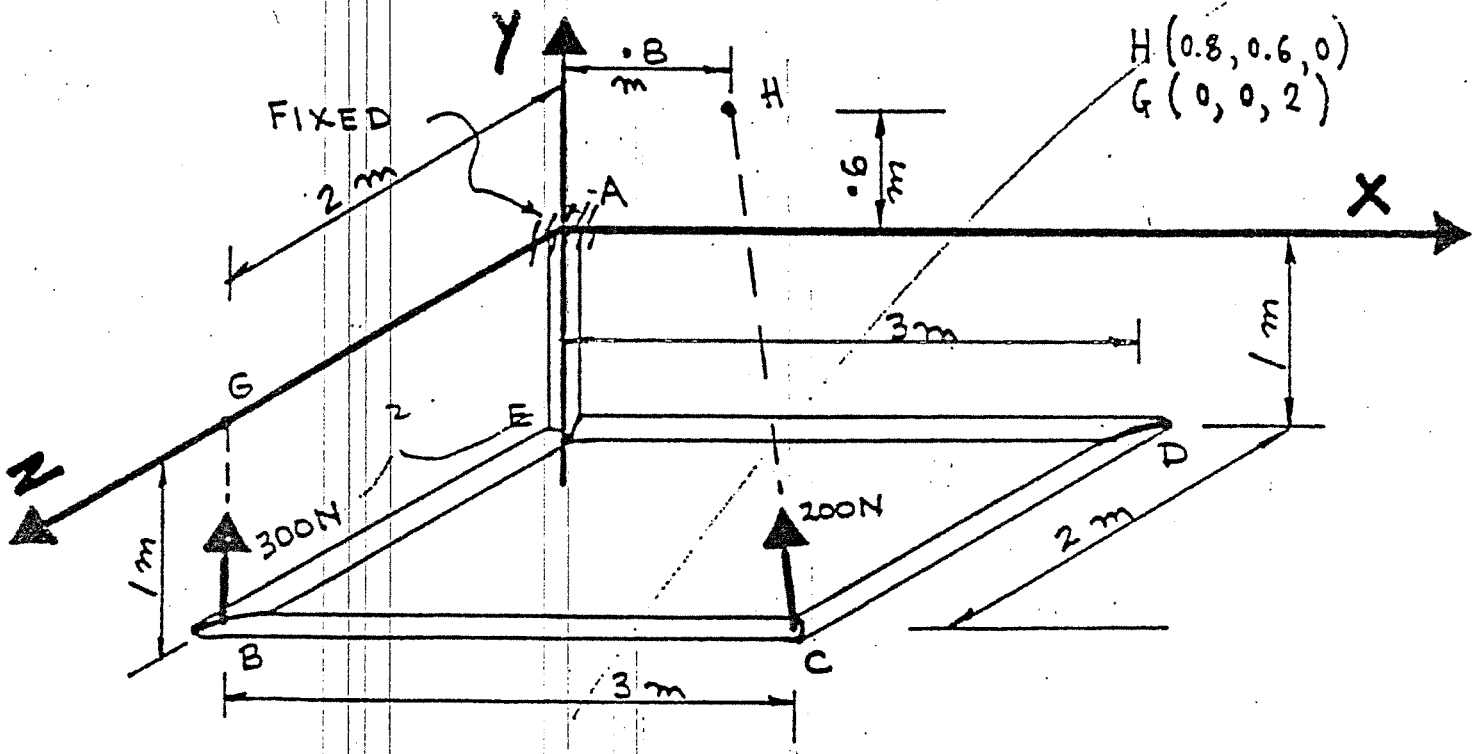
MATERIALS ALLOWED:

Any calculating device

SPECIAL INSTRUCTIONS:

Do any five problems. Only the first five problems presented will be graded.
All questions carry equal weight.

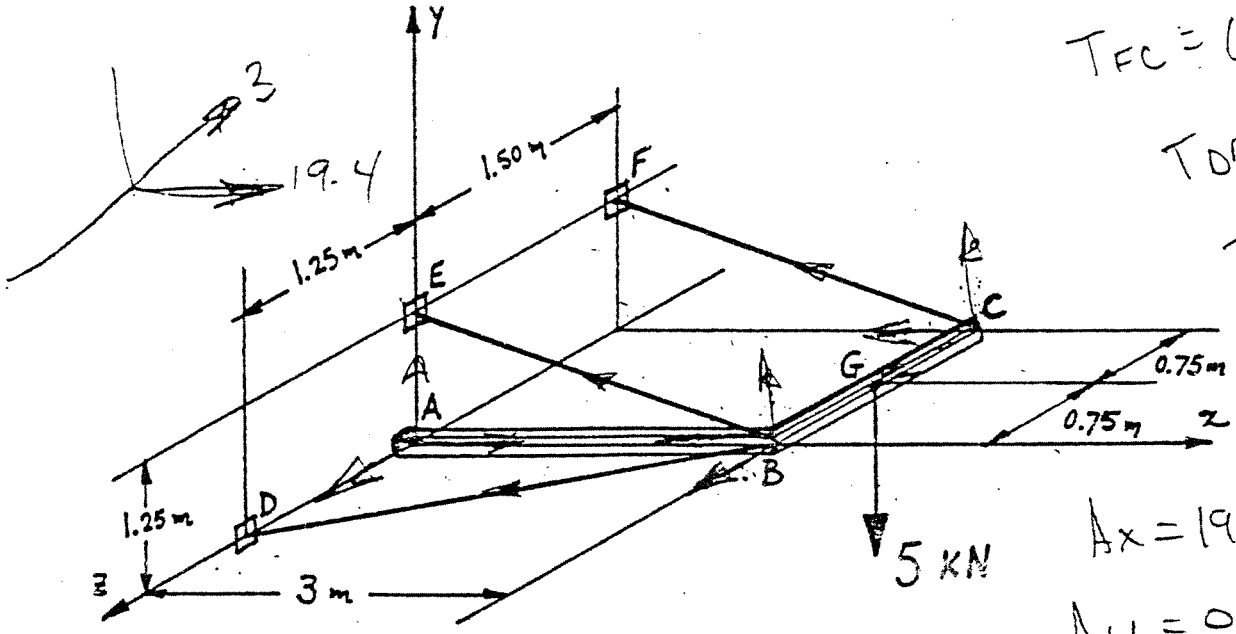
1. The steel frame AEBCDE is supported at a fixed connection at A. For the loading shown, determine the components of the reaction in the X, Y, Z direction at A and the moments about each axis to keep the frame in equilibrium.



$\frac{1}{2} \frac{1}{6} \frac{1}{3}$

$\frac{1}{3} \frac{1}{6} \frac{1}{3}$

2. The rigid L-shaped member ABC is supported by a ball and socket at A and by the three cables BD, BE and CF as shown. Determine the tension in each cable and the reaction components at A caused by the 5-KN force applied at G.



$T_{FC} = 6.5 KN$

$T_{DB} = 7.8 KN$

$T_{EB} = 6.5 KN$

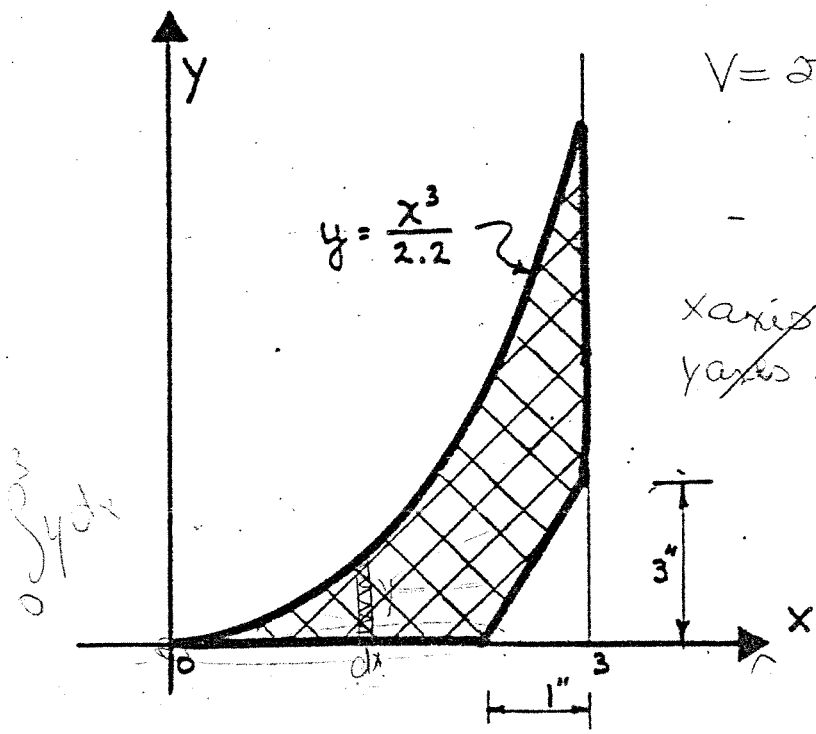
$A_x = 19.2 KN$

$A_y = 0$

$A_z = -3 KN$

3) For the cross-hatched area shown:

a) Locate the centroid with respect to the OX axis.
b) What is the volume generated if this area is rotated 100 degrees about the OX axis?



$V = 2\pi \bar{y} A \cdot \frac{100}{360}$

x axis → $\bar{y}$

y axis → $\bar{x}$

$\int_0^3 y\,dx$

ENGR 242/2 STATICS, Section V, Fall 1996

Test # 1

Attempt all questions; only calculators permitted. Time: 75 minutes

Marks

35 (1) Struts *AB* and *AC* in Fig. 1 can transmit only axial tensile or compression forces. Determine the forces in struts *AB* and *AC* and the tension in cable *AD* when force **F** = 1250 kN.

use coordinates

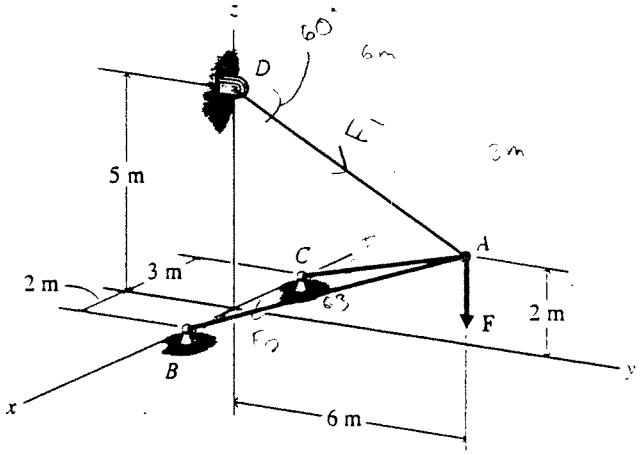

Fig. 1

35 (2) The tension in cable *AB* is 2 kN in Fig. 2. (a) What are the magnitude and direction of the moment about point *D* due to the force exerted by the cable? (b) What is the moment about the shaft *CD* due to the same force? Draw a sketch to indicate the sense of the moment about the shaft.

30 (3) A bracket is subjected to the force-couple system shown in Fig. 3. Determine (a) the magnitude and direction of the single equivalent force; (b) the perpendicular distance from support *O* to the line of action of the equivalent force.

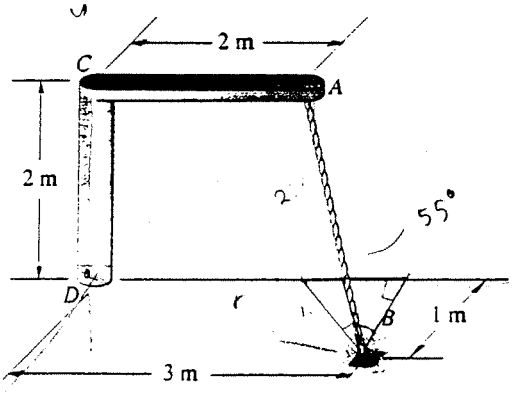

Fig. 2

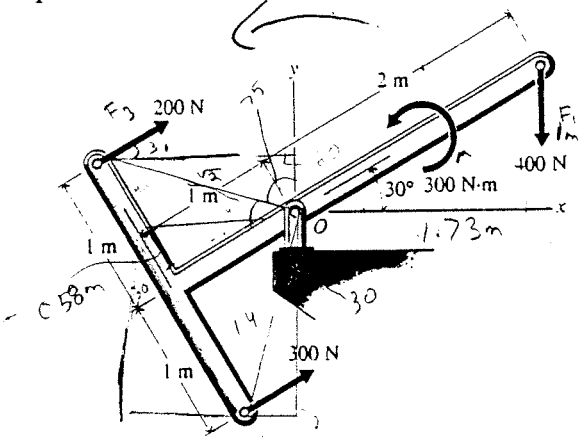

Fig. 3

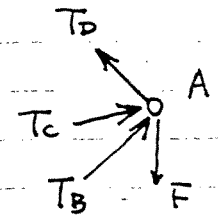
Test # 1, ENGR 242/V, 1996

1.



$\vec{AD} = 0\vec{i} - 6\vec{j} + 3\vec{k}$ $\quad\therefore\quad AD = \sqrt{45}$

$\vec{BA} = -2 \quad +6 \quad +2$ $\quad\quad BA = \sqrt{44}$

$\vec{CA} = 3 \quad +6 \quad +2$ $\quad\quad CA = 7$

$\Sigma \vec{F} = 0$

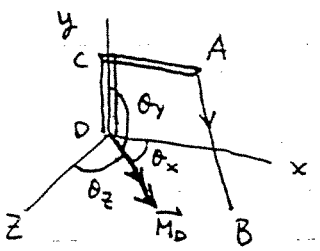
$x: \quad -\frac{2}{\sqrt{44}} T_B + \frac{3}{7} T_C = 0$

$y: \quad -\frac{6}{\sqrt{45}} T_D + \frac{6}{\sqrt{44}} T_B + \frac{6}{7} T_C = 0$

$z: \quad \frac{3}{\sqrt{45}} T_D + \frac{2}{\sqrt{44}} T_B + \frac{2}{7} T_C = 1250$

$\therefore \quad T_D = 1677 \text{ kN}, \quad T_B = 995 \text{ kN}, \quad T_C = 700 \text{ kN}$ ◁

2.



(a) $\vec{r} = \vec{DB} = 3\vec{i} + \vec{k}$

$\vec{F} = 2\,\vec{AB}/AB = 2(\vec{i} - 2\vec{j} + \vec{k})/\sqrt{1^2+(-2)^2+1^2}$

$= \frac{2}{\sqrt{6}}(\vec{i} - 2\vec{j} + \vec{k})$

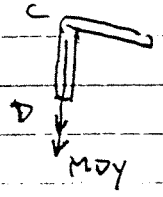
$\vec{M_D} = \vec{r} \times \vec{F} = \frac{2}{\sqrt{6}} \begin{vmatrix} \vec{i} & \vec{j} & \vec{k} \\ 3 & 0 & 1 \\ 1 & -2 & 1 \end{vmatrix}$

$= \frac{4}{\sqrt{6}}(\vec{i} - \vec{j} - 3\vec{k}) \quad (\text{kN}\cdot\text{m})$

Magnitude: $M_D = \frac{4}{\sqrt{6}}\sqrt{1^2+(-1)^2+(-3)^2} = \frac{4}{\sqrt{6}}\sqrt{11} = 5.42 \text{ (kN}\cdot\text{m)}$ ◁

Direction: $\theta_x = \cos^{-1}\left(\frac{1}{\sqrt{11}}\right) = 72°$; $\theta_y = \cos^{-1}\left(\frac{-1}{\sqrt{11}}\right) = 108°$; $\theta_z = \cos^{-1}\left(\frac{-3}{\sqrt{11}}\right) = 155°$ ◁

(b) about CD: $M_{DY} = -\frac{4}{\sqrt{6}} = -1.63 \text{ (kN}\cdot\text{m)}$ ◁



Sense: ↓ ◁

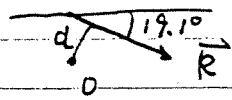
---

3. (a) $R_x = (200+300)\cos 30° = 433 \text{ N}$

$R_y = (200+300)\sin 30° - 400 = -150 \text{ N}$

$\therefore R = \sqrt{R_x^2 + R_y^2} = 458.3 \text{ (N)}$ ◁

$\theta = \tan^{-1}\left(\frac{R_y}{R_x}\right) = -19.1°$



◁

(b) $\curvearrowright M_O = -300(1) + 200(1) + 400(2\cos 30°) - 300$

$= 292.8 \text{ (N}\cdot\text{m)}$

$= d\,R$

$\therefore d = 292.8/458.3 = 0.64 \text{ (m)}$ ◁

Test # 2

Attempt all questions; only calculators permitted. Time: 90 minutes

(1) The door shown in Fig. 1 has a mass of 25 kg and is supported in a horizontal position by two hinges and a bar. The hinges have been properly aligned; therefore, they exert only force reactions on the door. Assume that the hinge at *B* resists any force along the axis of the hinge pins. Determine the reactions at supports *A*, *B* and *D*. (35 marks)

(2) A square viewing window is located in a large water tank as shown in Fig. 2. Determine the resultant force **R** exerted by the water pressure on the window and locate its line of action with respect to point *A* at the top of the window if $l = 2^{1/4}$ m, $d = 3$ m and $h = 5$ m. Use 1000 kg/m^3 for the density of water. (25 marks)

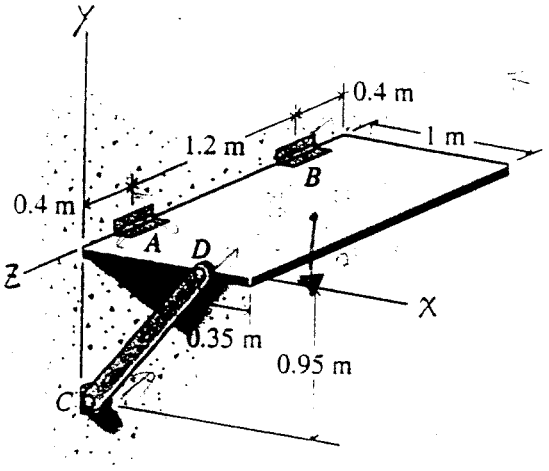

Fig. 1

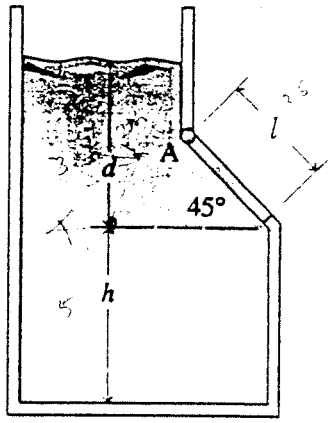

Fig. 2

(3) Determine the forces in members *BC*, *BD*, *CD* and *CE* of the truss shown in Fig. 3. (25 marks)

(4) Two prismatic homogeneous bars *AB* and *BC* of length *l* and 2*l*, respectively, are rigidly joined at *B* at an angle of 120° to each other, as shown in Fig. 4. In the suspended position shown, *AB* makes an angle α with the vertical string *OA*. Determine the value of α. (Hint: the resultant of the weight of the bars should be along *OA*, 15 marks)

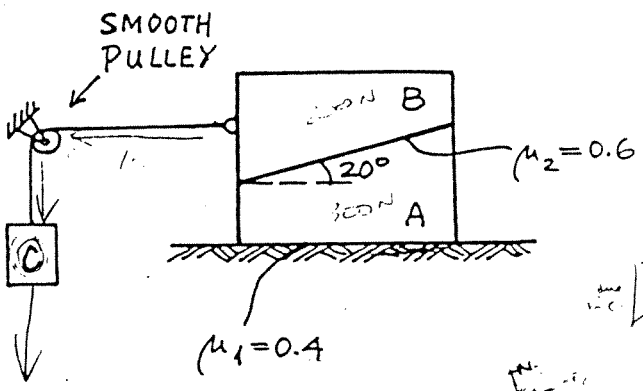
SPECIAL INSTRUCTIONS:

o questions 1 to 5 and either one of 6 or 7. All questions carry equal weight.

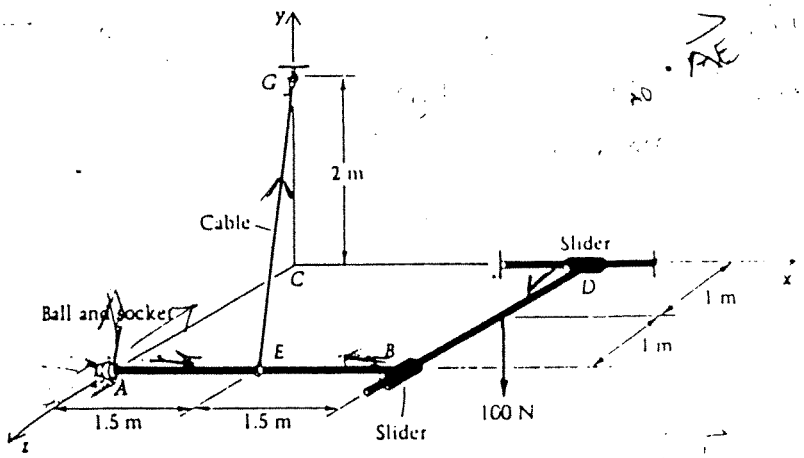
QUESTION 1

Blocks *A* and *B* weigh 300 N and 200 N, respectively. Using the coefficients of static friction indicated in the diagram, determine the greatest weight of block *C* without causing motion.



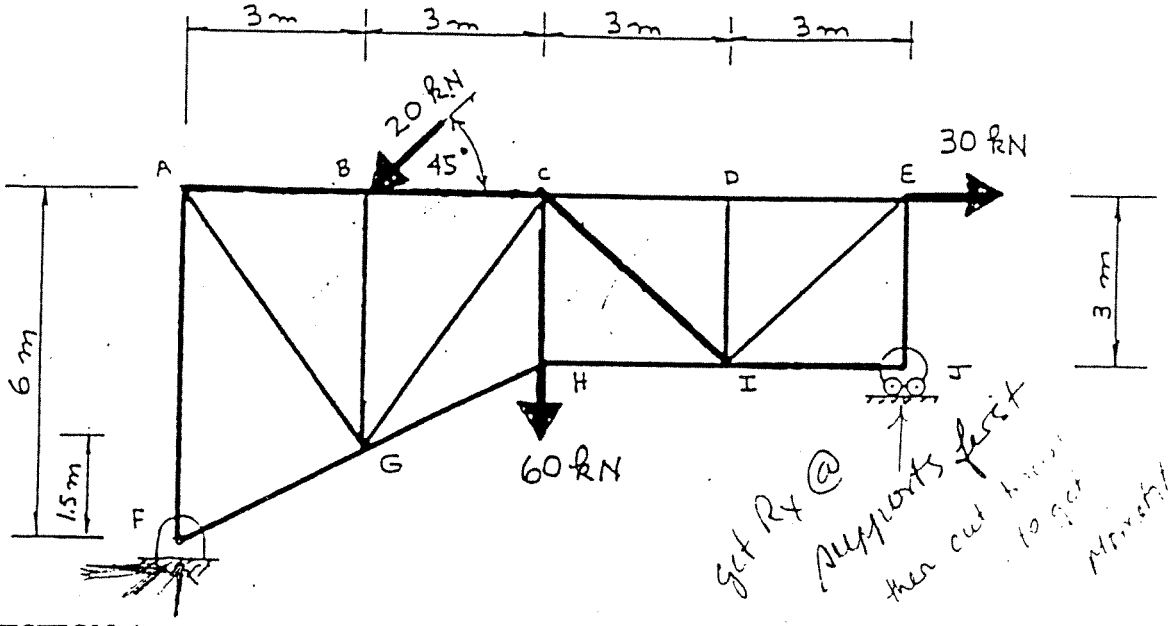
QUESTION 2

The structure shown is composed of two light bars and a cable. There is no resistance to rotation about and sliding along the axes of the two slides at *B* and *D*. Find the tension in the cable when the structure is subjected to the 100-N load.



QUESTION 3

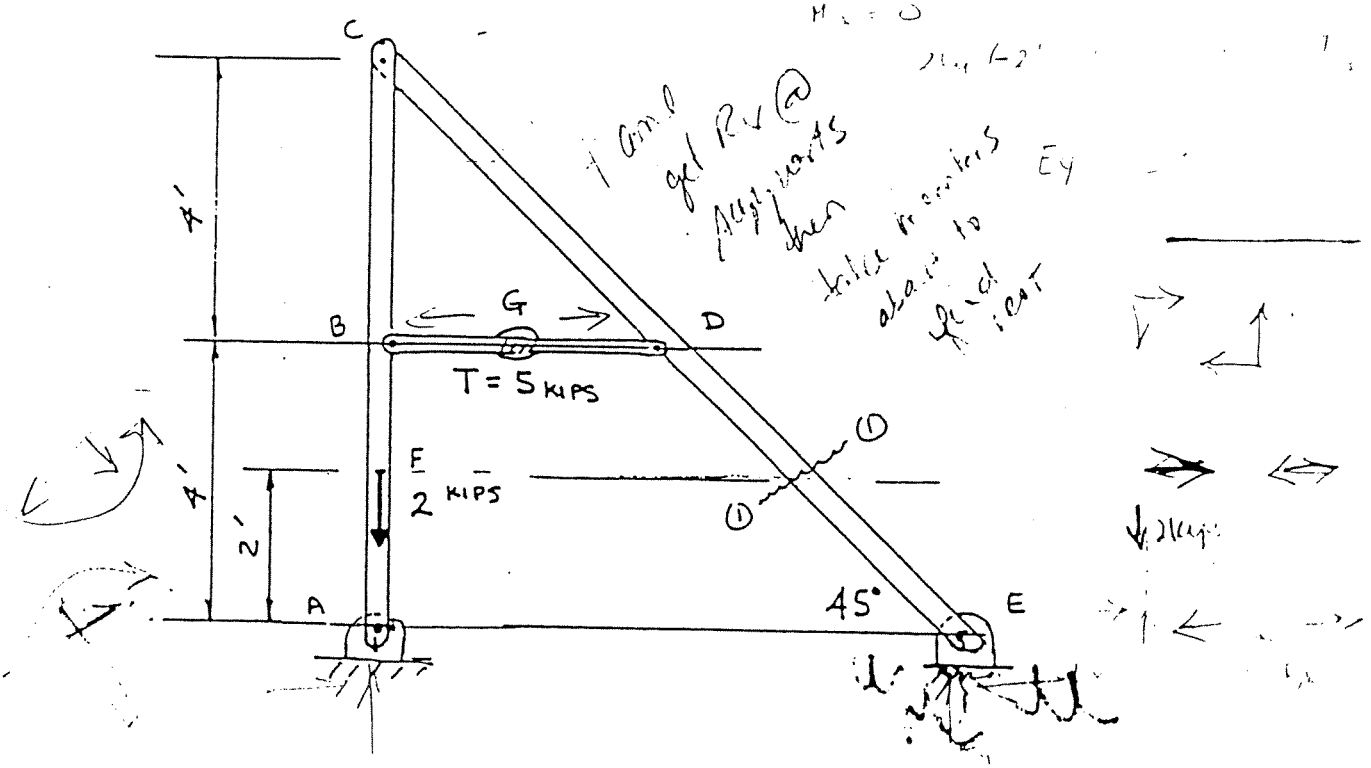
For the truss shown, calculate the reactions at *F* and *J* and obtain the forces in the members *BC*, *BG*, *CI* and *IJ*. Show these in a clear sketch of the truss indicating tension or compression.



QUESTION 4

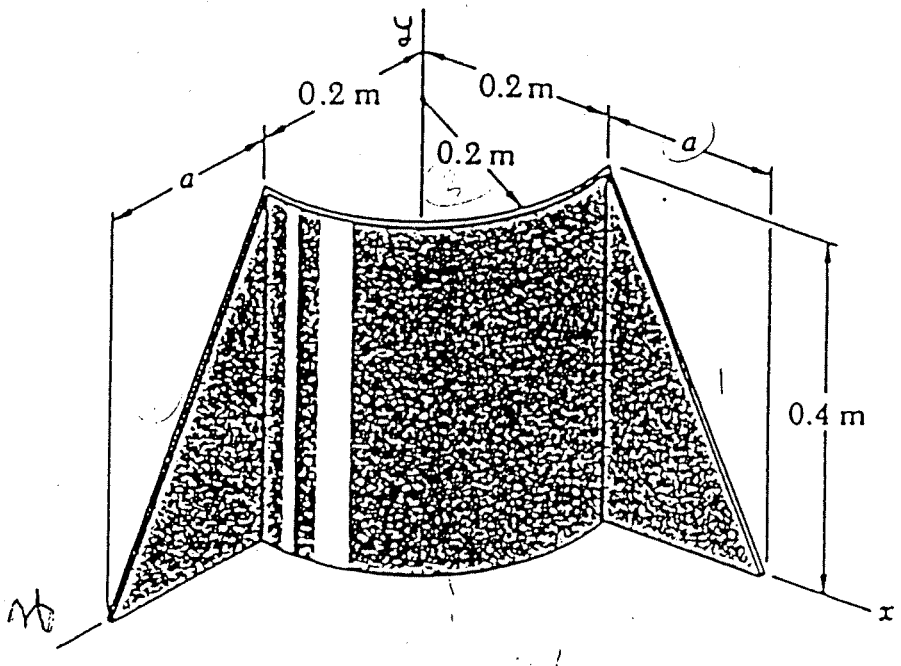
After the frame is set up, a 2-kip load is placed at point *F* and a turn buckle *G* is tightened so that the tension in member *BD* is 5 kips.

a) Find the reactions at *A* and *E* and the forces in the pin at *C*.
b) At section 1-1, what is the shear, bending moment and axial force in the member?



QUESTION 6

Determine the distance a so that the center of gravity of the sheet metal form is located 0.2 m from the y-axis. The thickness of the sheet is negligible.

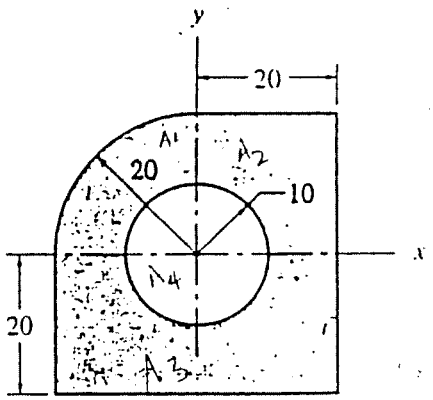


QUESTION 7

For the plane region with the circular cutout shown, find the moments of inertia with respect to

(a) the horizontal x-axis, i.e. I_x; and

(b) the horizontal centroidal axis, i.e. $\bar{I}_x$



Dimensions in mm

QUESTION 5

For the beam and loading shown,

a) sketch the bending moment and shearing force diagrams and indicate peak values;

b) write an equation for the bending moment valid in section BC of the beam, and locate the point of zero moment in this section.

STATICS	ENGR 242/2	T

EXAMINATION:	DATE & TIME:	# OF PAGES:
MIDTERM 2	November 25, 1999, 8:30 – 9:45 pm	3

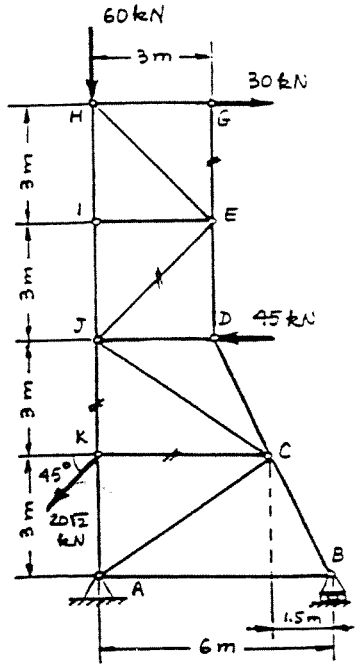
INSTRUCTOR: Dr. Eliza M. Haseganu

MATERIAL ALLOWED: ☒ NO ☐ YES

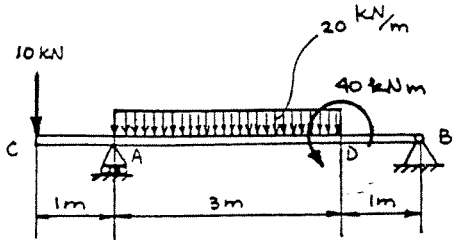
CALCULATORS ALLOWED: ☐ NO ☒ YES (non-programmable)

SPECIAL INSTRUCTIONS: Answer questions **1** and **2** for 35 marks each, and question **3 OR 4**, for 30 marks. Question **2** should be answered on the separate sheet provided.

1. Determine the forces in members GE, EJ, JK, and KC of the truss shown, and indicate whether these members are in tension or compression. Use the method of joints combined with the method of sections. Indicate with justification the zero force members.

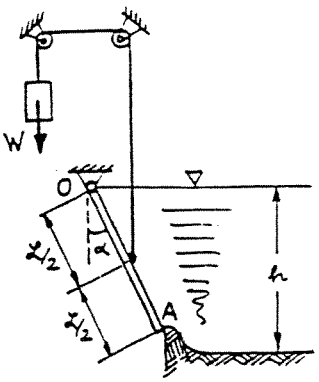


2. Draw the shear force and bending moment diagrams for the beam loaded as shown; indicate peak values. Write an equation for the shear force and the bending moment for section AD. Also, locate the points of zero moment on the beam. Answer this question on the separate sheet provided.



3. The gate *OA* is located at the end of a 2m wide channel and is supported by hinges along its top edge. The gate is held in its closed position by a cable and a weight *W*, as shown. Determine the minimum magnitude of the weight *W* necessary to keep the gate closed when the water level riches *O*.

Consider the density of water $\rho = 1000$ kg/m^3, $L = 3$ m, $\alpha = 30^\circ$ and $h = 3$ m. Neglect the weight of the gate.

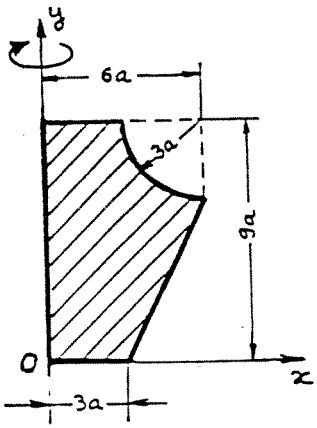


4. For the figure shown determine:

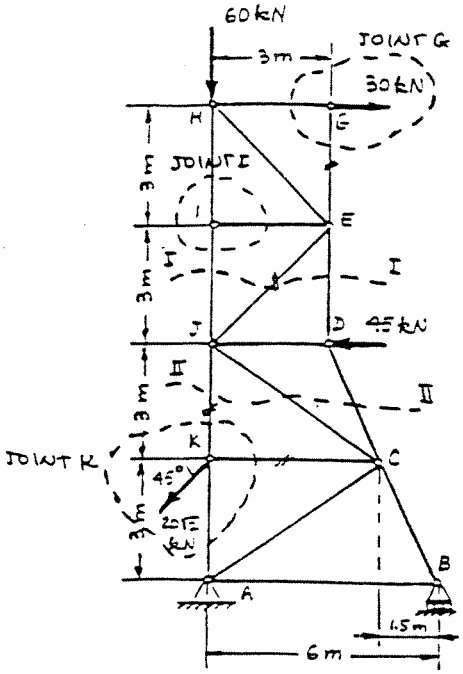
(1) the location of the centroid of the area;

(2) the volume generated by a complete rotation of the shaded area about the *y* axis.

(3) If $a = 0.1$ m, and the mass density of the material is $\rho = 100$ kg/m^3, determine the mass and the weight of the body of revolution obtained at (2).

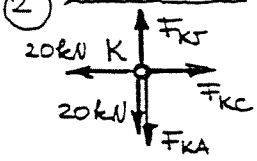


1.



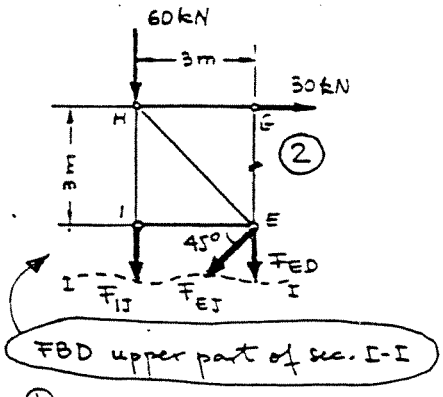
- METHOD of JOINTS:

(2) FBD JOINT K:



$\oplus \rightarrow \Sigma F_x = 0$; $F_{KC} - 20 = 0$ → $F_{KC} = 20$ kN (6) TENSION

- METHOD of SECTIONS:

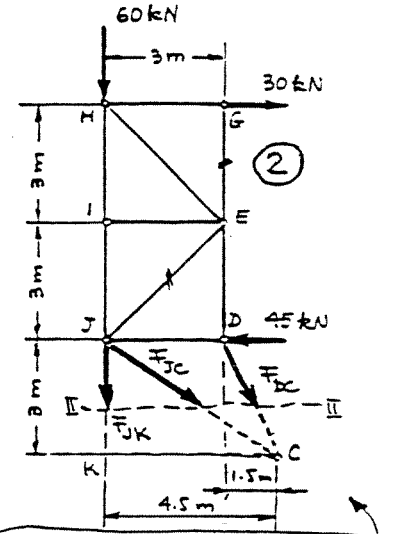


FBD upper part of sec. I-I

$\oplus \rightarrow \Sigma F_x = 0$;

$-F_{EJ}\left(\frac{\sqrt{2}}{2}\right) + 30 = 0$

→ $F_{EJ} = 42.43$ kN (6) TENSION



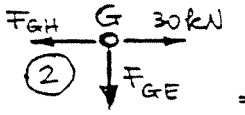
FBD upper part of sec. II-II

$\oplus \circlearrowleft \Sigma M_C = 0$;

$F_{JK}(4.5) + 60(4.5) - 30(9) + 45(3) = 0$

→ $F_{JK} = -30$ kN → $F_{JK} = 30$ kN COMPRESSION

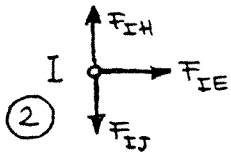
FBD JOINT G:



$\oplus \downarrow \Sigma F_y = 0$;

→ $F_{GE} = 0$ (4)

FBD JOINT I:

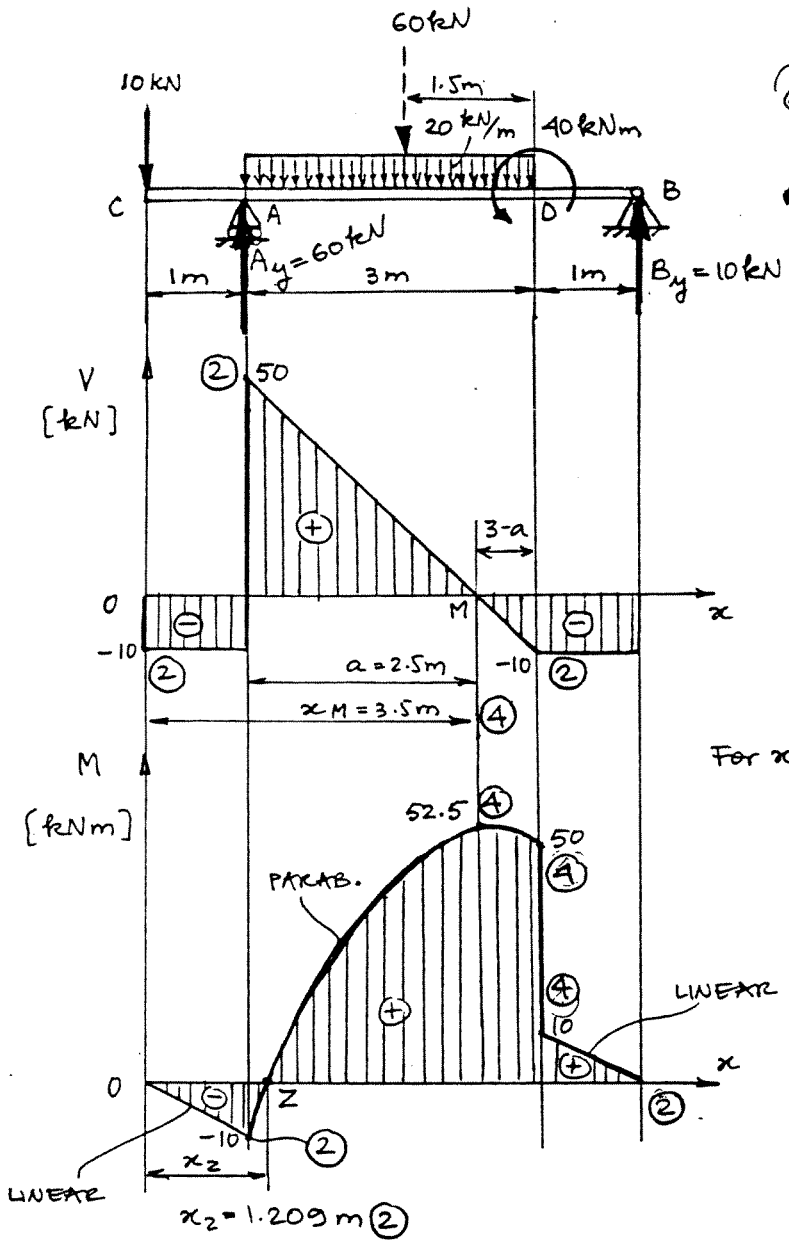


$\oplus \rightarrow \Sigma F_x = 0$;

→ $F_{IE} = 0$ (3)

Σ 35

2. Draw the shear force and bending moment diagrams for the beam loaded as shown; indicate peak values. Write an equation for the shear force and the bending moment for section AD. Also, locate the points of zero moment on the beam. Answer this question on this sheet.



10

18

$V = [\oplus \uparrow \Sigma F_y \text{ LEFT of } ①]$

$M = [\oplus \circlearrowleft \Sigma M_A \text{ LEFT of } ①]$

- **REACTION FORCES**

$\oplus \circlearrowleft \Sigma M_B = 0;\ 4A_y - 10(5) - 60(2.5) - 40 = 0$

$\rightarrow A_y = 60\,kN$ (2)

$\oplus \circlearrowleft \Sigma M_A = 0;\ 4B_y + 40 - 60(1.5) + 10(1) =$

$\rightarrow B_y = 10\,kN$ (2)

Check: $\oplus \uparrow \Sigma F_y = 0;\ 60 + 10 - 10 - 60 \equiv 0$

- **SHEAR FORCE**

$V_{C\ominus} = 0\ ;\ V_{C\oplus} = -10\,kN$

$V_{A\ominus} = -10\,kN\ ;\ V_{A\oplus} = -10 + 60 = 50\,kN$

$V_D = -10 + 60 - 60 = -10\,kN = V_{B\ominus}$

$V_{B\oplus} = 0$

For x_M: $V_M = 60 - 10 - 20(x_M - 1) = 0$

$\rightarrow x_M = 3.5\,m$

or: similarity in $\triangle$ $\frac{a}{50} = \frac{3-a}{10}$ $\rightarrow a = 2.5$

$\rightarrow x_M = a + 1 = 3.5\,m$

- **BENDING MOMENT**

$M_C = 0\ ;\ M_A = -10\,kNm$

$M_M = 60(2.5) - 10(3.5) - \frac{20(2.5)^2}{2} = 52.5\,kNm$

$M_{D\ominus} = 60(3) - 10(4) - 60(1.5) = 50\,kN$

$M_{D\oplus} = 50 - 40 = 10\,kNm$

$M_B = 0$

- **INTERVAL AD**

① $V = -10 + 60 - 20x = -20x + 50\ kN$

② $M = -10x + 60(x-1) - 20\frac{(x-1)^2}{2}\ kNm$

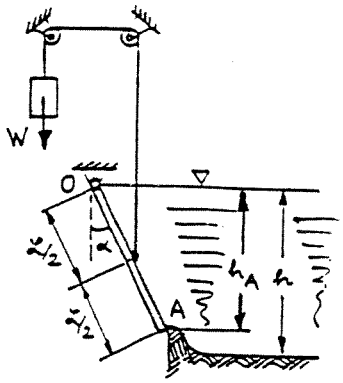
- **POINTS of ZERO MOMENT**

$M_z = -10x_z + 60(x_z - 1) - 20\frac{(x_z-1)^2}{2} = 0$

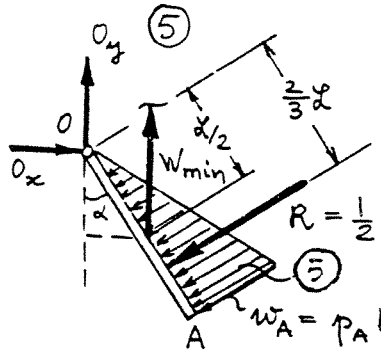
$x_z^2 - 7x_z + 7 = 0 \rightarrow x_z = \begin{cases} 5.79\,m \\ 1.209\,m \end{cases}$

$\Sigma\ 35$

3.



FBD: Since W_{min} is required, reaction force at support A is ~~zero~~



$R = \frac{1}{2} w_A \ell = \frac{1}{2} 50.9743 (3) = \underline{76.46\ kN}$ (5)

$w_A = p_A b = \underbrace{\rho g}_{\gamma} h_A b$

$= 1000(9.81)\frac{3\sqrt{3}}{2} 2 = 50.9743\ \frac{kN}{m}$ (5)

$h_A = \ell \cos\alpha = \ell \cos 30° = \ell \frac{\sqrt{3}}{2}$

$\oplus \Sigma M_O = 0 \quad W_{min} \frac{\ell}{2} \sin\alpha - R \frac{2}{3}\ell = 0$

$$\underline{W_{min} = \frac{8R}{3} = \frac{8(76.46)}{3} = 203.89\ kN}$$ (10)

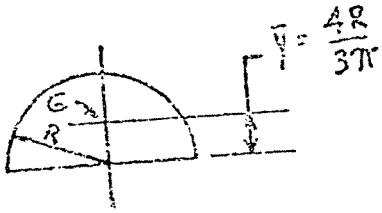
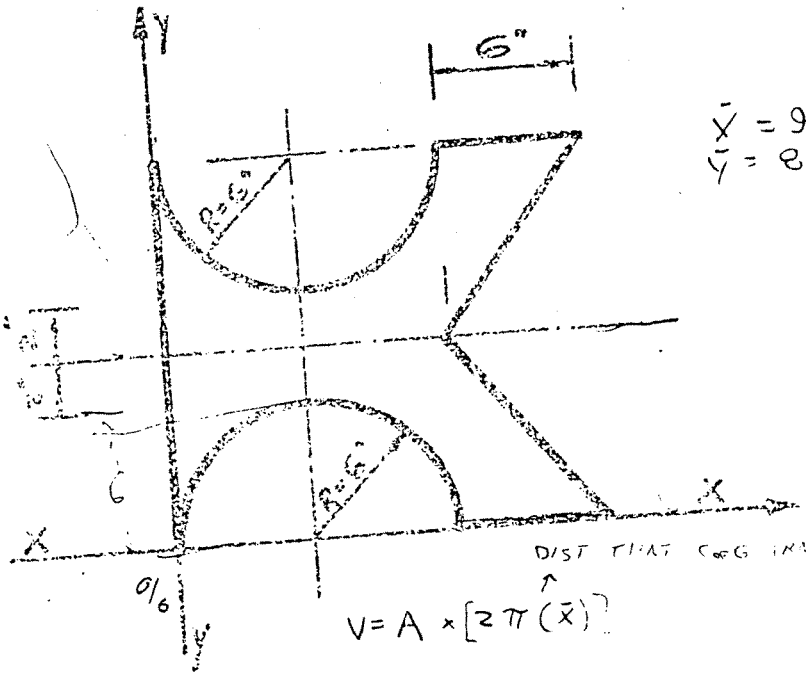
CONCORDIA UNIVERSITY
ENGINEERING C242
Statics
Section Y

Class Test 2
Time: 1½ Hours

Prof. C. Goldman

1. a) Find the centroid of the area shown in the figure.
   b) What it the volume generated if this area is rotated 300° about the Y axis.





$\bar{x} = 9.8"$
$\bar{y} = 8"$

DIST THAT C of G TRAVELS DURING ROTATION

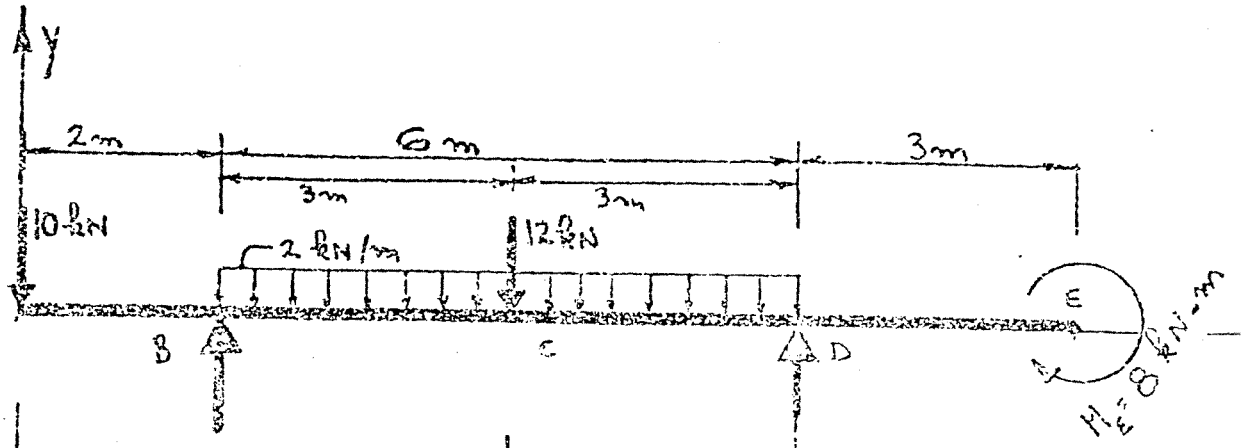
$V = A \times [2\pi(\bar{x})]$

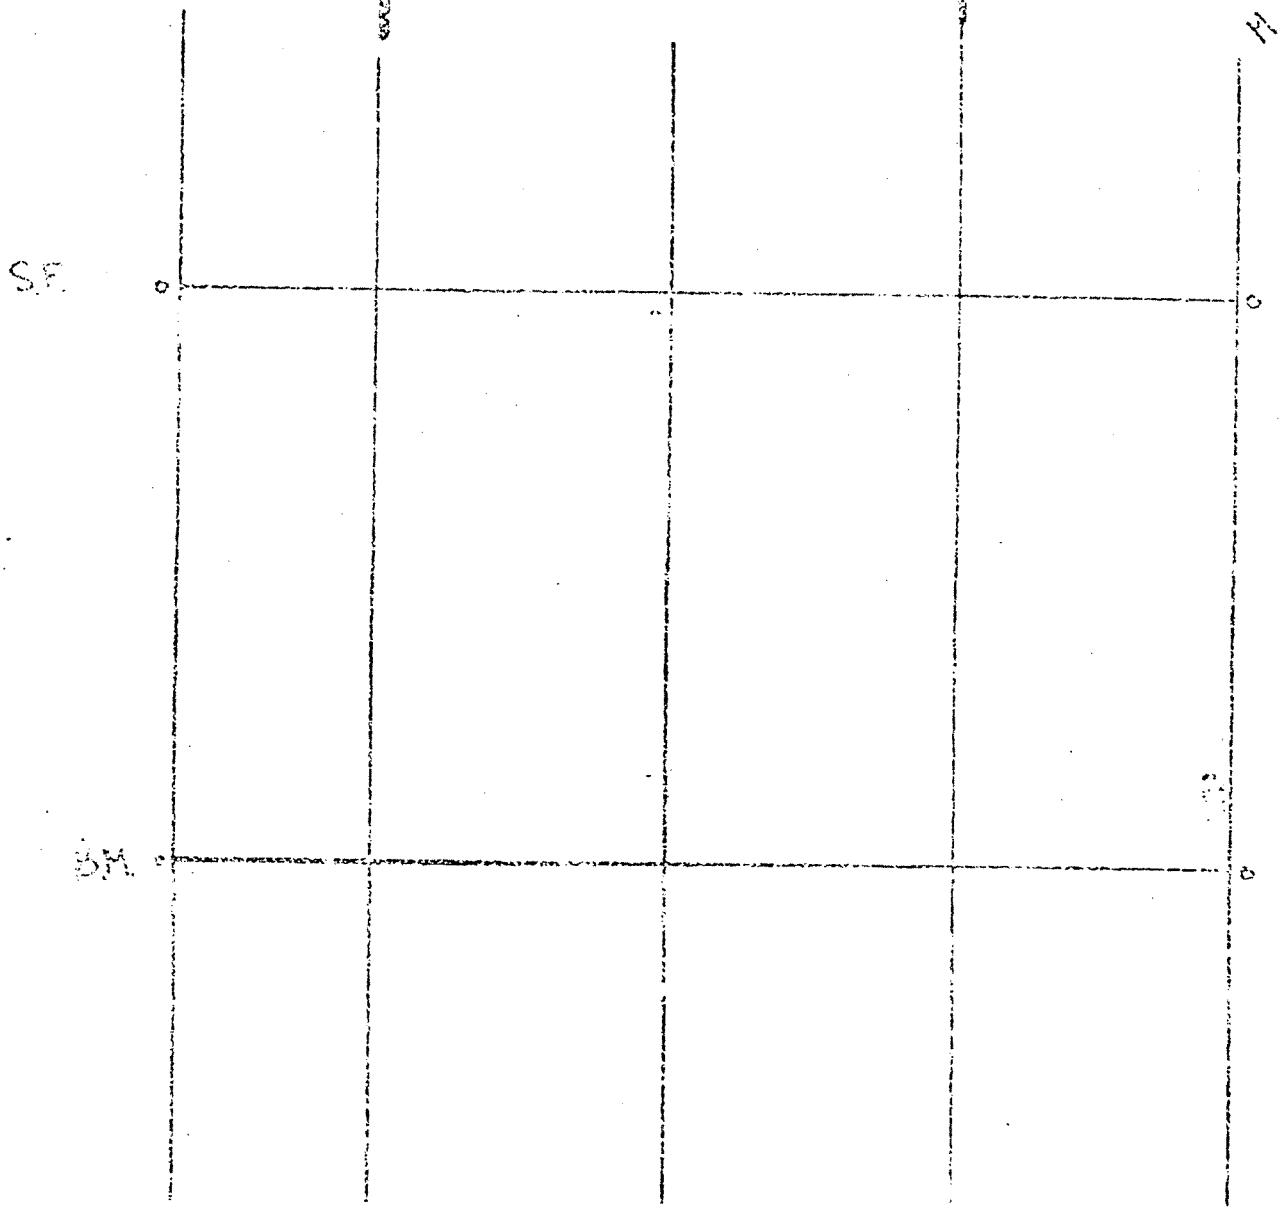
$V_{@300^\circ} = A \times 2\pi\bar{x} \times \frac{300}{360}$

2. a) Sketch a bending moment, and shearing force diagram for the beam shown in the figure. SHOW PEAK VALUES

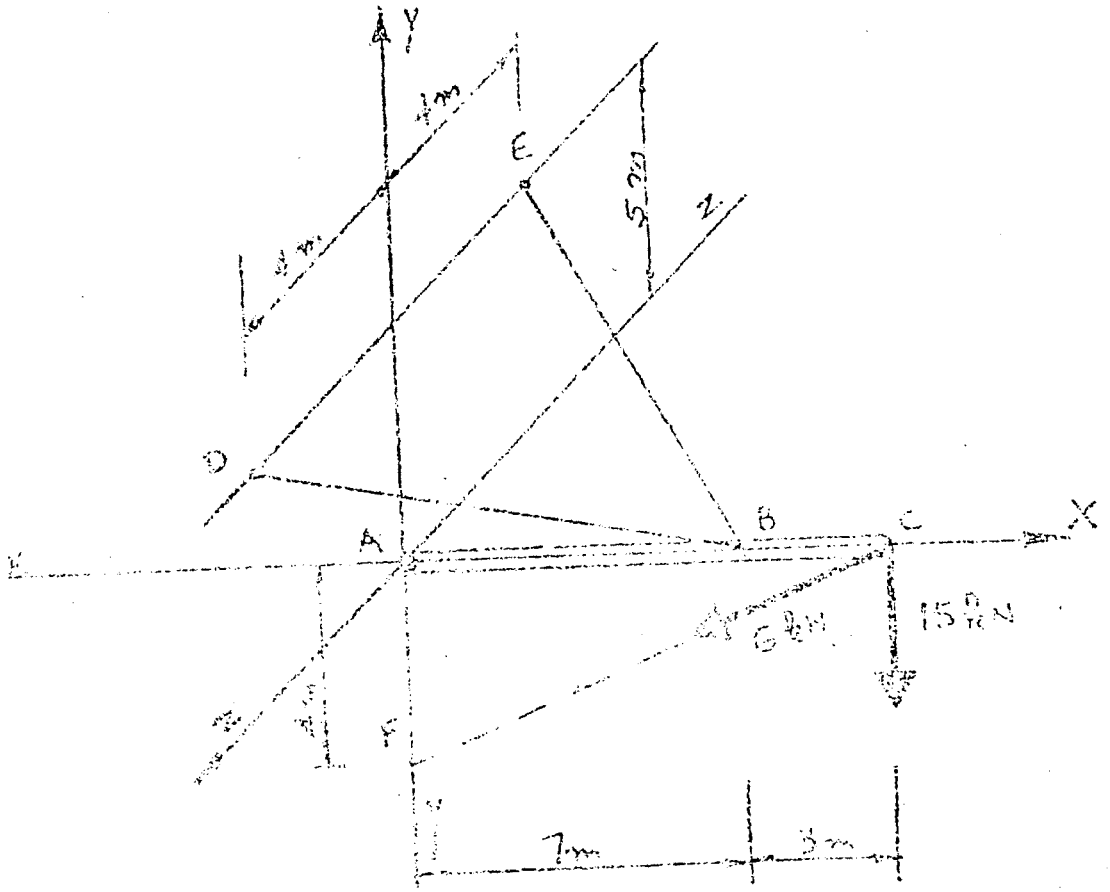
b) Locate the point of inflection. i.e. zero moment, BETWEEN

c) Write an equation for the shear, and moment, valid between points B and C of the beam.



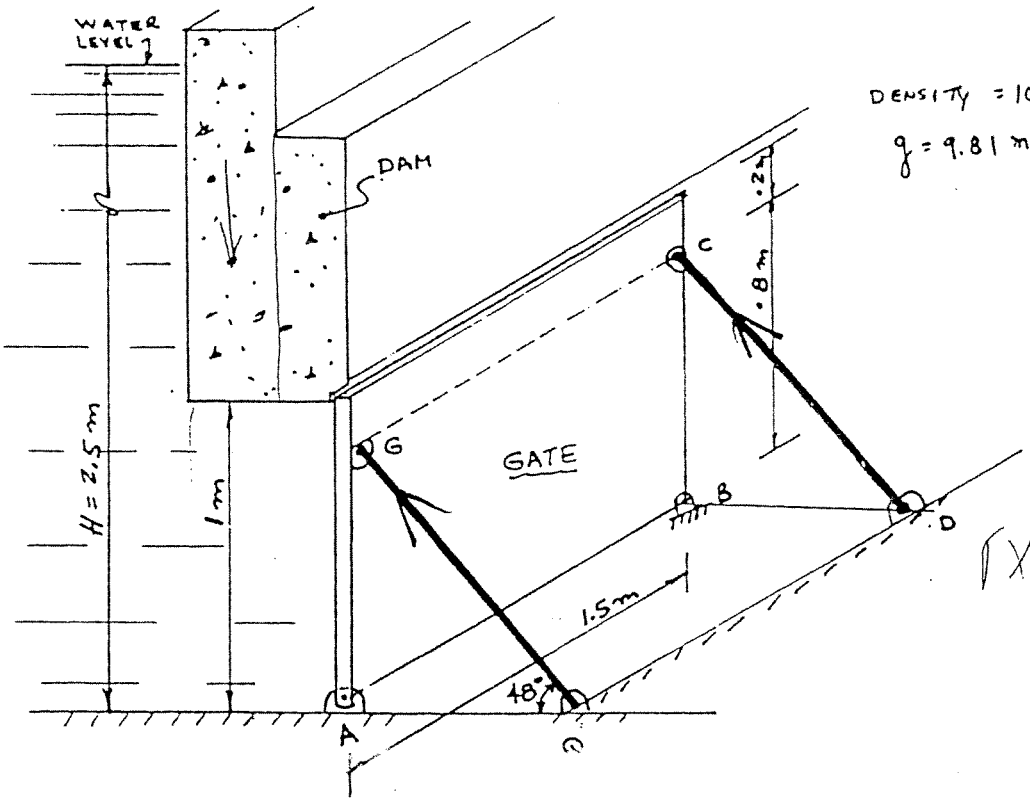


3. Find the reactions at point A and the tension in the cables in the structure in equilibrium shown.



Problem 2

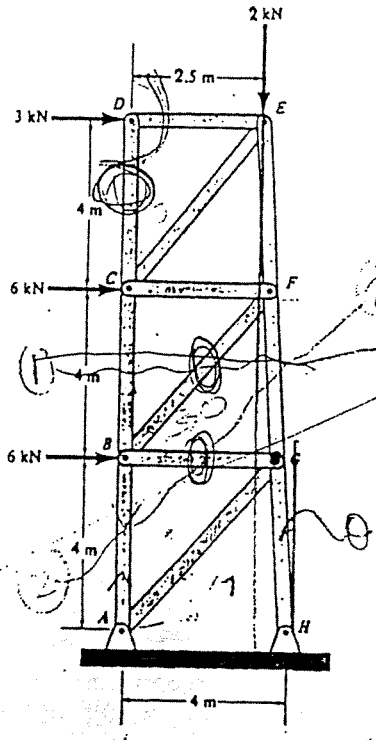
Determine the forces in members CD and GQ holding the rectangular gate in a dam, as shown. Note that members CD and GQ are parallel and carry only axial loading.



DENSITY = 1000 kg/m³
g = 9.81 m/s²

Problem 3

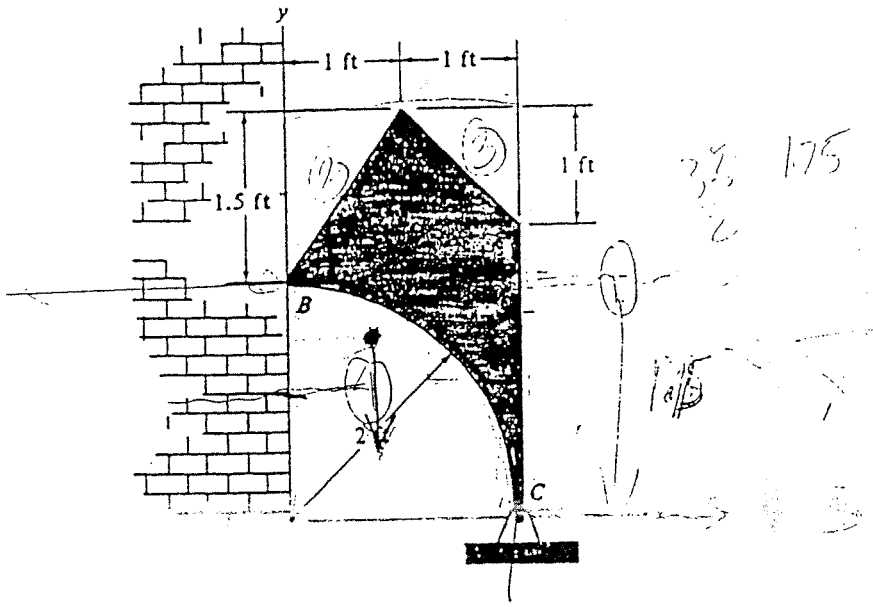
Determine the force in members DC, BG and BF of the tower truss shown. Indicate if the members are in tension or compression. Note that the left side ABCD stands vertical.



Problem 6

The 3-ft thick arched structure is supported by a pin at C and bears against the smooth wall at B. If the specific weight of the material of the structure is 90 lb/ft^3 determine:

a) the reactions at supports B and C; and
b) the moment of inertia of the cross-section of the structure (shaded area) with respect to x axis.



$P_B = 2.4 \times 1000 \times 9.81 = 23.5 \text{ kN/m}^2$

$P_R = 0.9 \times 1000 \times 9.81 = 8.8 \text{ kN/m}^2$

$T_{TOTAL} = 36.5$

$= 31.55$

$I_x = \frac{I_{xc}}{c} = \frac{31.55}{36.5}$

$I_x = 0.86$

CONCORDIA UNIVERSITY

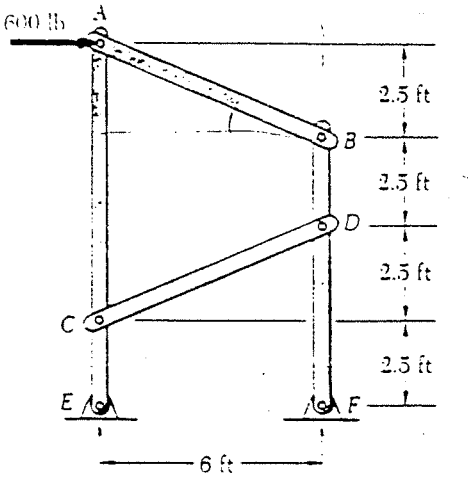
ENGR 242/2 STATICS, Section T, Fall 1995

Test # 3

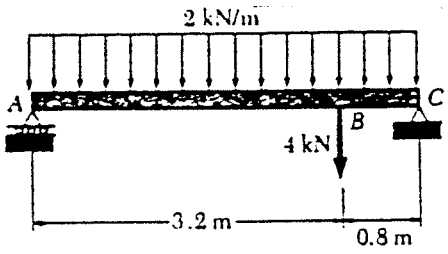
Attempt all questions; only calculators permitted. Time: 75 minutes

Marks

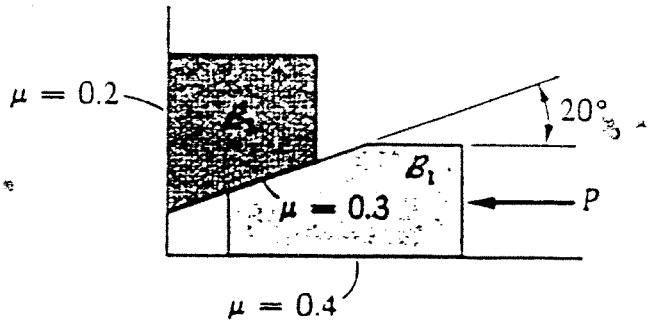
35 (1) A 600-lb horizontal force is applied to member *ACE* at *A* of the frame shown. Determine the forces acting on the two vertical members of the frame.



35 (2) For the beam and loading shown, (a) draw the shear and bending-moment diagrams; and (b) write equations for the shearing force and bending moment between *A* and *B*.



30 (3) For the given friction coefficients, find the force *P* for which the 200-lb block B_2 will be on the verge of sliding upward. The wedge B_1 weighs 50 lb.



CONCORDIA UNIVERSITY
Faculty of Engineering & Computer Science

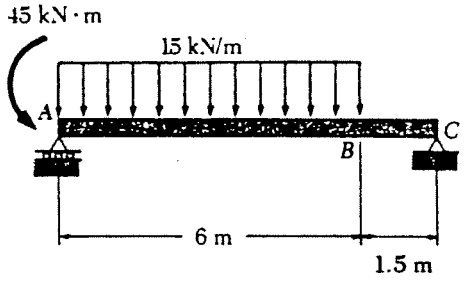
ENGR 242/2 STATICS, Section V, Fall 1996

Test # 3

Attempt all questions; only calculators permitted. Time: 90 minutes

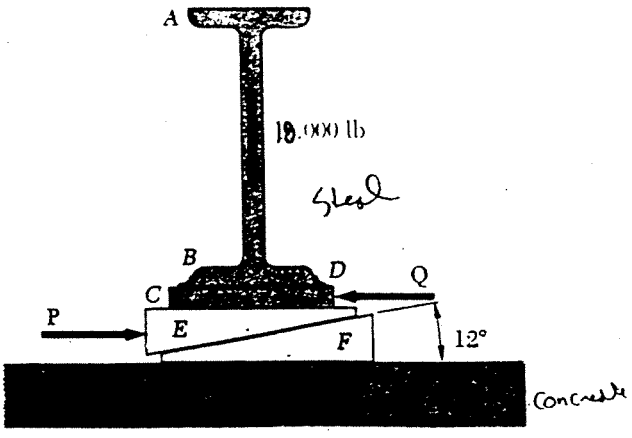
Marks

35 (1) For the beam and loading shown, (a) sketch the shearing-force and bending-moment diagrams and indicate all peak values; (b) write equations for the shearing force and bending moment between *A* and *B*; (c) locate the point(s) of inflection, if any.

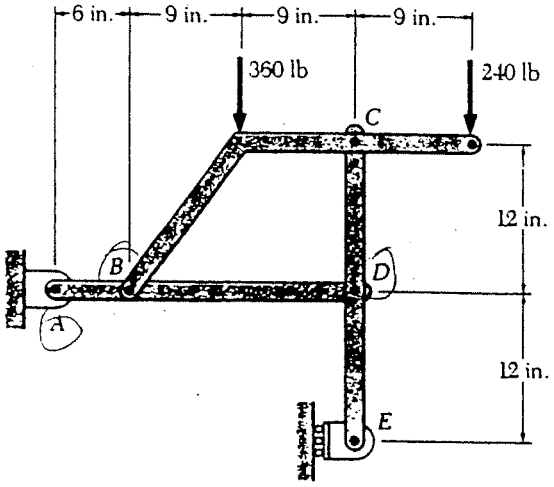


30 (2) The elevation of the end of a steel floor beam is adjusted by means of steel wedges *E* and *F*. The steel base plate *CD* has been welded to the lower flange of the beam; the end reaction of the beam is known to be 18,000 lb. The coefficient of static friction is 0.30 between the two steel surfaces and 0.60 between the steel and concrete. If horizontal motion of the base plate *CD* is prevented by the force **Q**, determine (a) the force **P** required to raise the beam and the corresponding force **Q** and (b) whether the steel wedge *F* will move.

35 (3) For the frame and loading shown, determine the components of all forces acting on member *ABD* and show the results on a clear sketch.



Question (2)



Question (3)

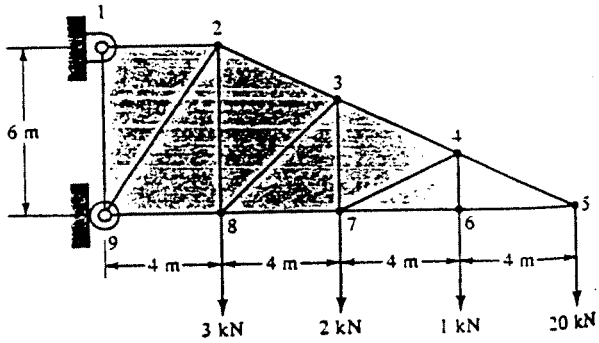
Concordia University
Faculty of Engineering and Computer Science
ENGR 242/2 **Statics** Section V

Test #3

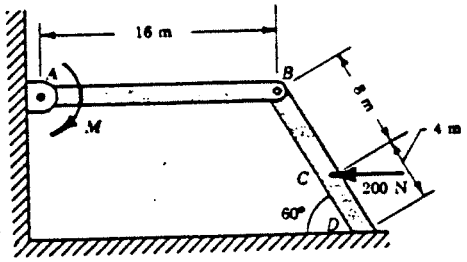
Please, attempt all questions, only calculators permitted. Time: 60 Minutes

Marks

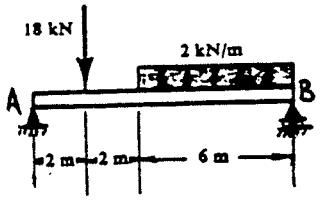
30 1) Determine the forces in the members 3-7 and 4-6 for the truss shown.



35 2) A horizontal 200-N force is applied to the sloping member BCD, whose bottom rests on a smooth horizontal plane. Its upper end is pinned at B to the horizontal member AB. What couple M must be applied to the member AB to hold the system in equilibrium? What is the magnitude of the pin reaction at B?

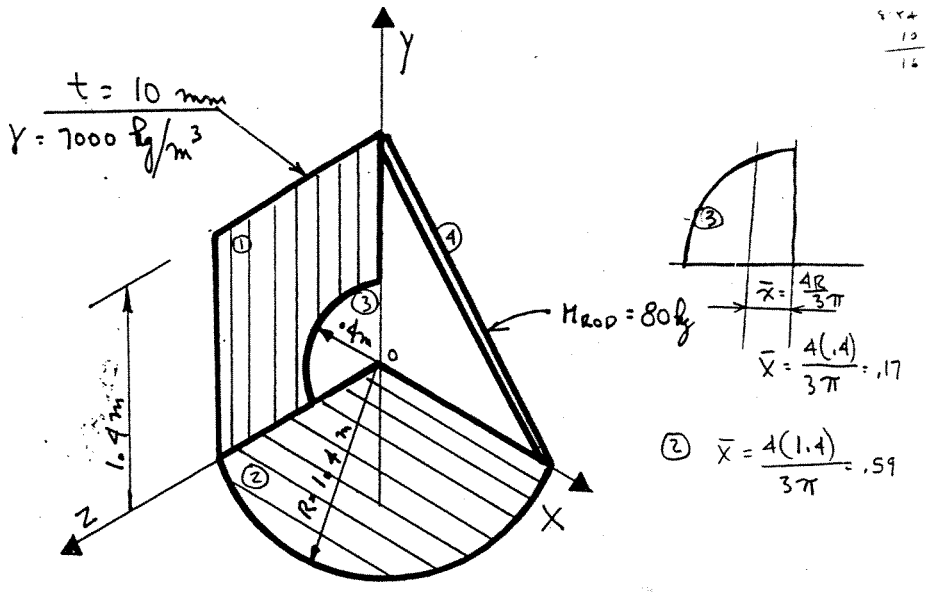


35- 3) Draw the shear force and bending moment diagrams of the simply supported beam shown.



12

4. Two thin plates shown hatched and a rod are welded together to form the structure shown in Fig. 4. Find the centre of gravity of mass of the structure.



$\bar{x} = \frac{4(.4)}{3\pi} = .17$

② $\bar{x} = \frac{4(1.4)}{3\pi} = .59$

FIG. 4

$(m_1 + m_3) = (1.4 \times 1.4)(.01)(7000) = 137.2$ kg

$m_2 = \left[\frac{\pi(1.4)^2}{4}\right](.01)(7000) = 107.7$

$m_3 = \left[\frac{\pi(.4)^2}{4}\right](.01)(7000) = 8.8$

ITEM	m	$\bar{x}$	$m\bar{x}$	$\bar{y}$	$m\bar{y}$	$\bar{z}$	$m\bar{z}$
1+3	137.2	0	0	.7	96	.7	96
2	107.7	.59	63.5	0	0	.59	63.5
3	-8.8	0	0	.17	-1.5	.17	-1.5
4	80	.7	56	.7	56	0	0
Σ	316.1	...	119.5		150.5		158

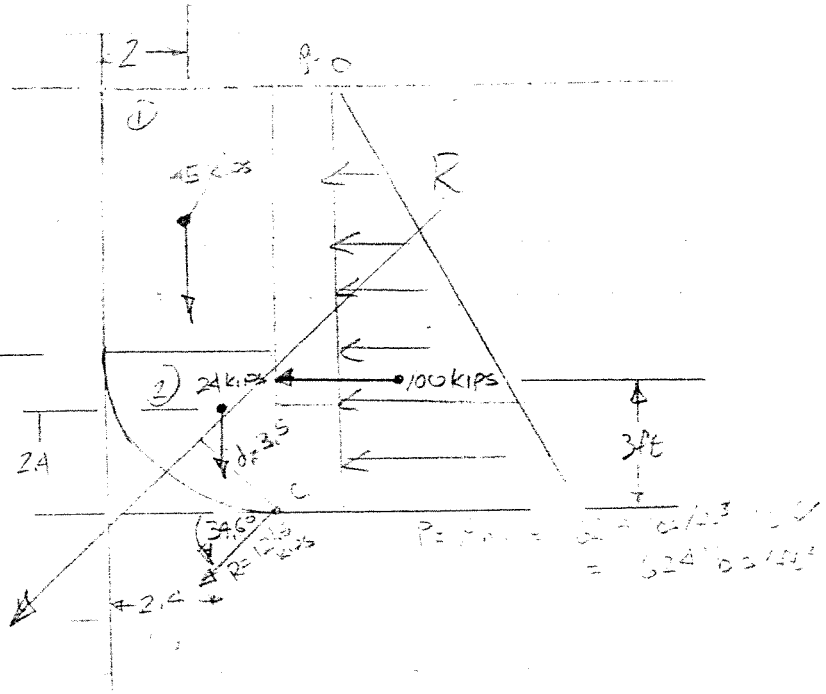
$\bar{X} = \frac{\Sigma m\bar{x}}{\Sigma m} = \frac{119.5}{316.1} = .378$ m

$\bar{Y} = \frac{\Sigma m\bar{y}}{\Sigma m} = \frac{150.5}{316.1} = .476$ m

$\bar{Z} = \frac{\Sigma m\bar{z}}{\Sigma m} = \frac{158}{316.1} = .4998$

4

3)



$c = \frac{4r}{3\pi} = \frac{16}{3\pi} = 1.6$

$= 2.4$

① $A = 4 \times 6 = 24\ ft^2$ $\quad V_1 = 24\ ft^2 \times 30\ ft = 720\ ft^3$

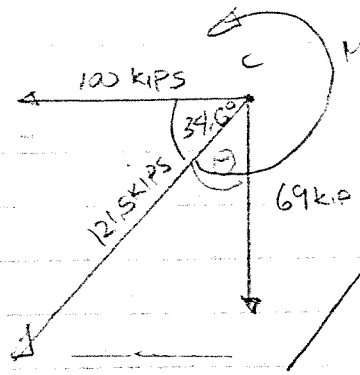
② $A = \frac{\pi r^2}{4} = \frac{\pi 16}{4} = 12.56\ ft^2$ $\quad V_2 = 12.56\ ft^2 \times 30\ ft = 377\ ft^3$

$W_1 = V_1 \rho = 720\ ft^3 \cdot 62.4\ lbs/ft^3 = 44928\ lbs = 45\ kips$

$W_2 = V_2 \rho = 377\ ft^3 \cdot 62.4\ lbs/ft^3 = 23529.3\ lbs = 24\ kips$

$H = \left(\frac{P_1 + P_2}{2}\right)(32\ ft \times 10\ ft) = \frac{(624\ lbs/ft^2)(320\ ft^2)}{2} = 99840\ lbs = 100\ kips$

$=$



$R = \sqrt{100^2 + 69^2}$

$= 121.5\ KIPS$

$\tan^{-1}\theta = \frac{100}{69} = 55.3°$

$\sum M_{@c} = -24(1.6) - 45(2) - 100(3) -$

$= -38.4 - 90 - 300$

$= -428.4$

$M_R = d_R R$

$d_R = \frac{M_R}{R} = \frac{-428.8}{121.5} = -3.52$

Question which direction should R be shifted at distance d ?

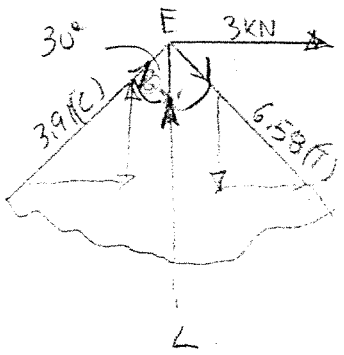
At Pt D

$\Sigma M_{@C} = 0$ FIND F_{EF} Assume Comp

$= -F_{EF}\cos 60°(3.464 - 3(3.5)) - 1.5(3.5) - 0.5(\tfrac{1}{2}(3)) - 1.5(1.5) + 1.5(3)$

$0.75F_{EF} = 2.60 - 4.59 - 1.25 - 2.4 + 0.7$

$F_{EF} = -4.94/0.75 = -6.59$ $\therefore$ $F_{EF} = 6.59(T)$



at Pt E

$+\uparrow \Sigma F_y = 0$ FIND F_{EL} ASSUME TEN

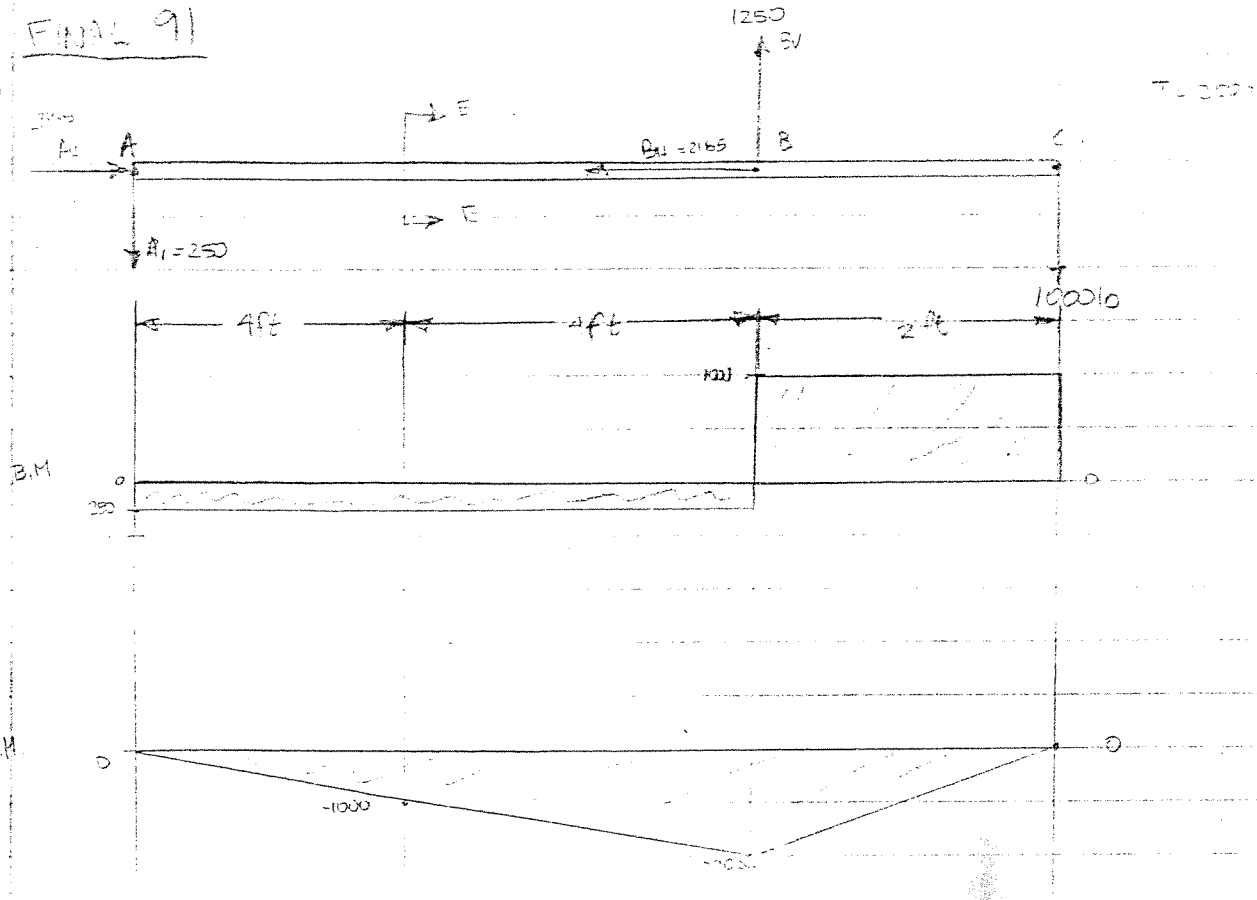
$-3.9\sin 30° - 6.59\sin 30° - F_{EL} = 0$

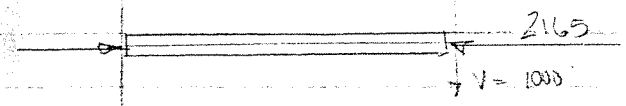
$3.386 - 5.693 - F_{EL}$

$F_{EL} = -2.312$ $\therefore$ $F_{EL} = 2.312$ (C)

FINAL 91

B2)





$\overrightarrow{\Sigma M_{@A}} = 0$ $\quad 1000(10) - B_1(8) = 0$ $\quad B = 10\,000/8 = 1250$

$\overrightarrow{\Sigma M_{@B}} = -A_1(8) + 1000(2) = 0$ $\quad A_V = 2000/8 = 250$

$\tan 30° = \frac{2}{A}$ $\quad A = \frac{1250}{\tan 30°} = 2165$

MOMENT EQNS:

$\overrightarrow{\Sigma M_{@EE}} = -250(4) = -1000$

$\overrightarrow{\Sigma M_{@D}} = -250(8) = -2000$

$\overrightarrow{\Sigma M_{@C}} = -250(10) + 1250(2) = -2500 + 2500 = 0$

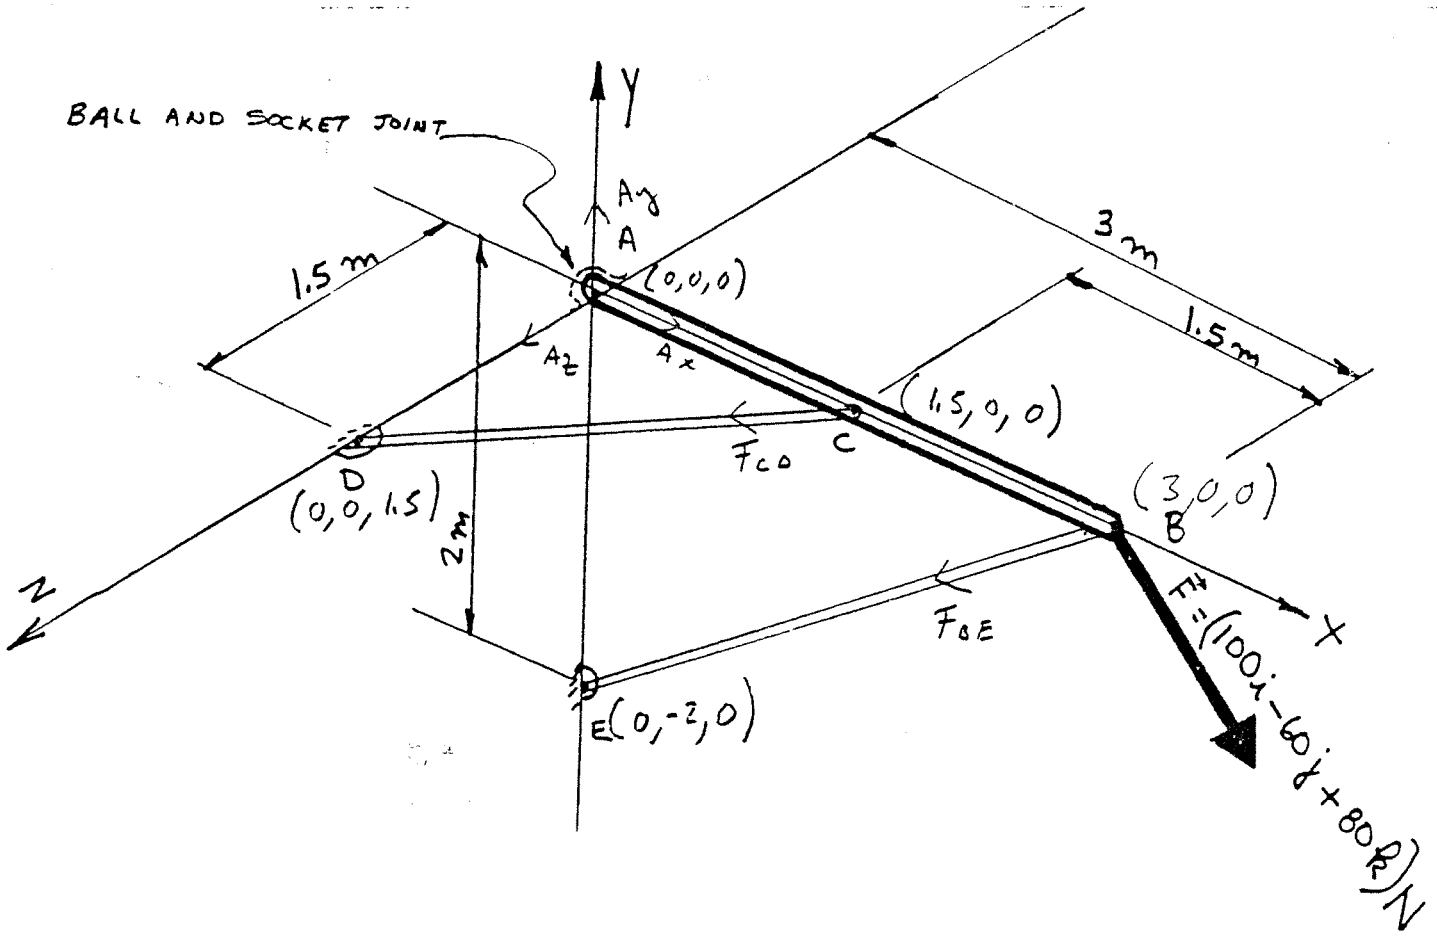
SPECIAL INSTRUCTIONS:
Do any five questions.
All questions carry equal weight.

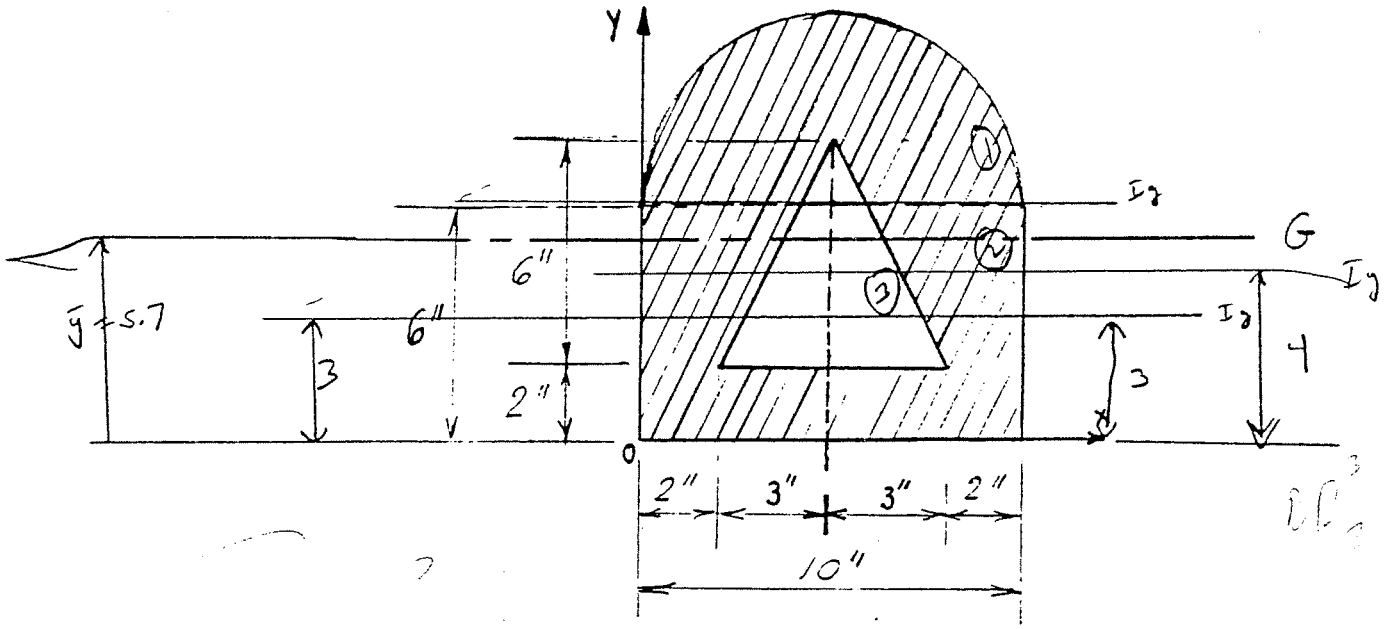
Question 1:

Calculate the forces in members CD and BE and the reactions at A for the structure shown. Note that all members can take tension or compression and that A is a ball and socket joint.



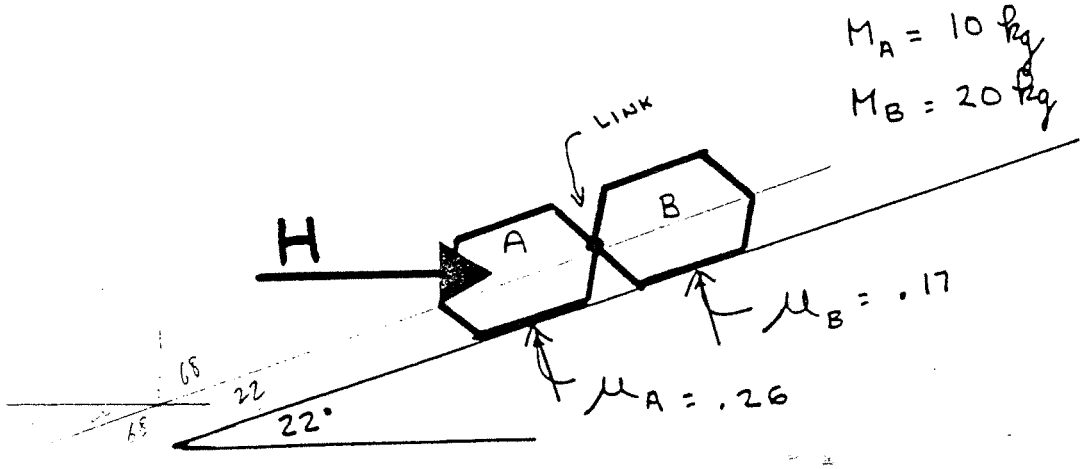
Question 2:

Determine the coordinates of the centroid and find the moment of inertia of the shaded area about its horizontal centroidal axis.



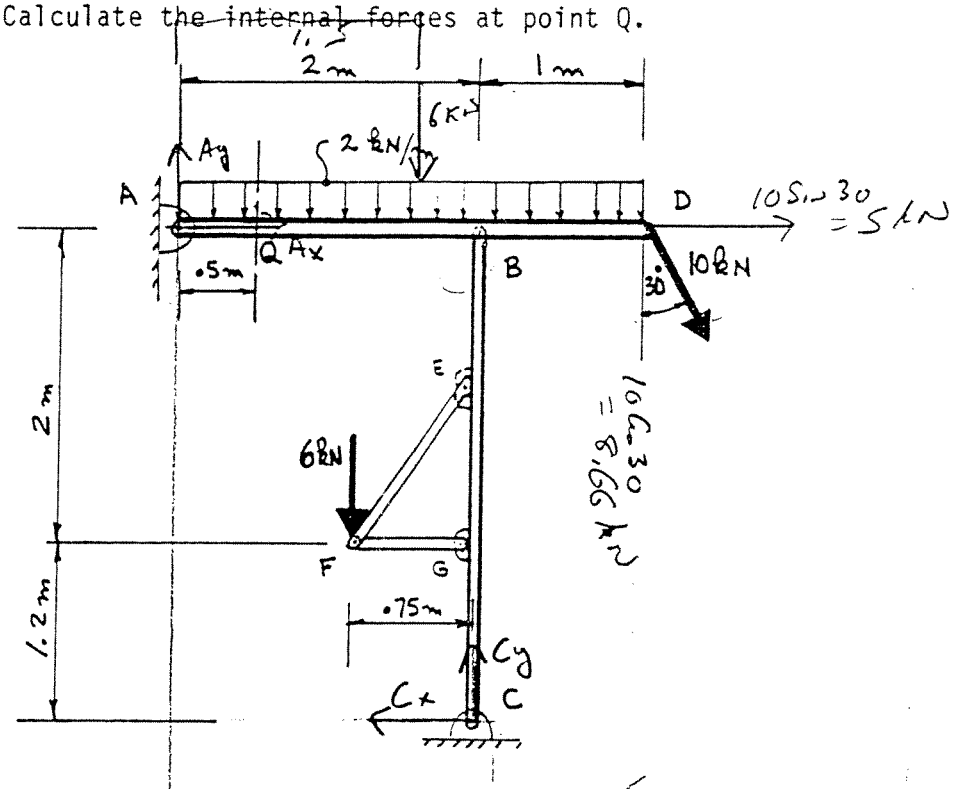
Question 3:

Find the horizontal force H required just to push the two blocks A and B up the plane. Block A has a mass of 10 kg and a coefficient of static friction with the plane equal to 0.26. Block B has a mass of 20 kg and a coefficient of static friction with the plane equal to 0.17. Note that the short link is parallel to the plane and H is applied to block A only.



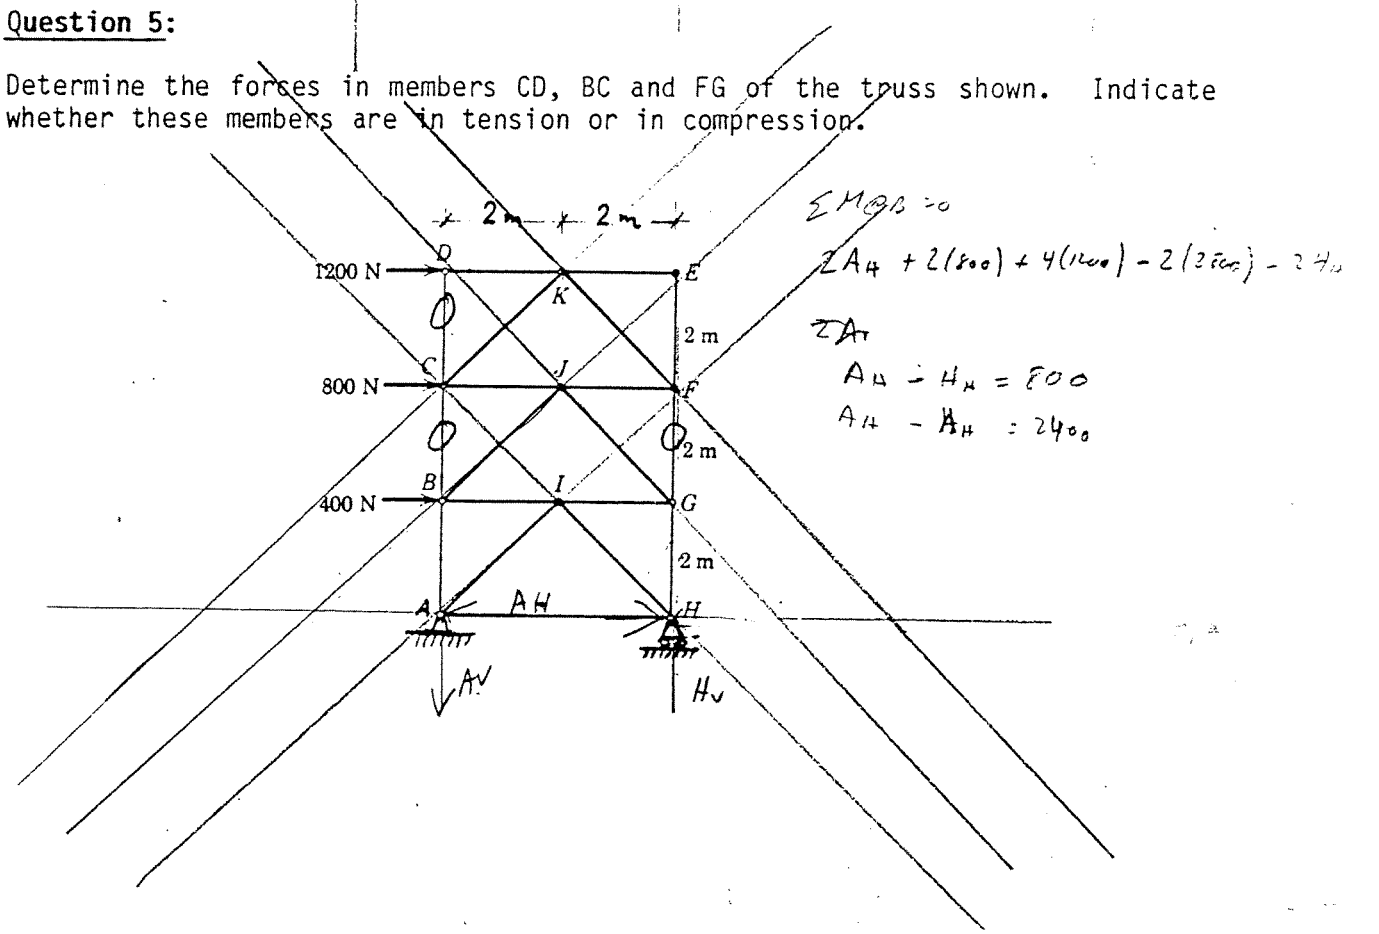
Question 4:

For the frame shown determine the reactions at A and C and the forces on the pin at B. Calculate the ~~internal forces~~ at point Q.



Question 5:

Determine the forces in members CD, BC and FG of the truss shown. Indicate whether these members are in tension or in compression.



$\Sigma M_{@B} = 0$

$2A_H + 2(800) + 4(1200) - 2(2\,\text{kN}) - 2H_V$

ΣA_H

$A_H - H_H = 800$

$A_H - A_H = 2400$

V. Jain Sharma

SPECIAL INSTRUCTIONS:

Do any five questions. Only the first five problems presented will be graded.

All questions carry equal weight.

---

1. A balloon is held by three cables as shown. If the tension of cable AC is 2500 lb., what is the total lift force provided by the balloon?

$\circlearrowleft + T_{AB}\left(\frac{12}{25}\right) - T_{AB}\left(\frac{15}{25}\right)$

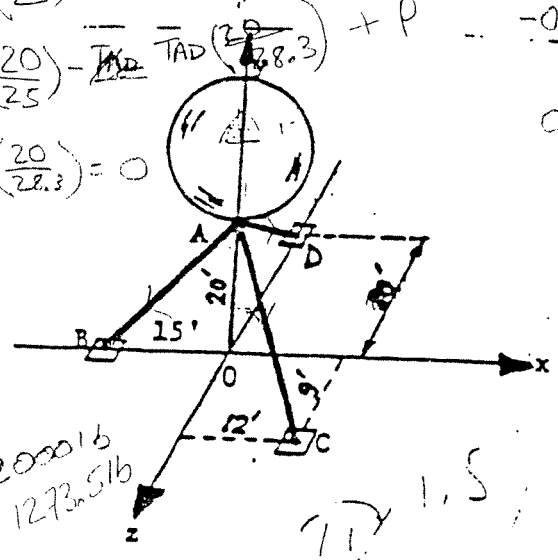
$0.48\,T_{AC} - 0.6\,T_{AB} = 0$

$\circlearrowleft - T_{AC}\left(\frac{20}{25}\right) - T_{AB}\left(\frac{20}{25}\right) - T_{AD}\left(\frac{20}{28.3}\right) + P$

$-0.8\,T_{AC} - 0.8\,T_{AB} - 0.707\,T_{AD} = P$

$\therefore T_{AC}\left(\frac{9}{25}\right) + - T_{AD}\left(\frac{20}{28.3}\right) = 0$

$0.36\,T_{AC} - 0.707\,T_{AD} = 0$



$T_{AC} = 2500\text{ lb}$

$T_{AB} = 2000\text{ lb}$

$T_{AD} = 1273.5\text{ lb}$

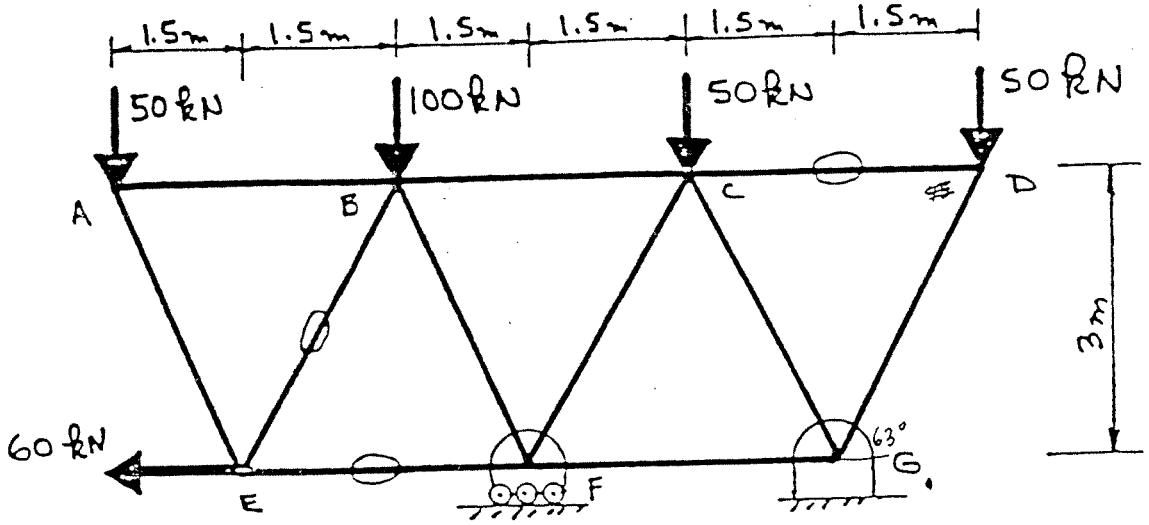
$AC = 25'$ $AB = 25'$ $AD = 28.3'$

Ans: 6000 lb

+1600

1450 lb

2. For the truss shown calculate the forces in members CD, BE, and EF, marked thus 0. Indicate whether these members are in tension or compression.



ANS: CD = 25 kN ✓ Tension

BE = 55 kN ✓ Tension

EF = 10 kN ✓ Tension

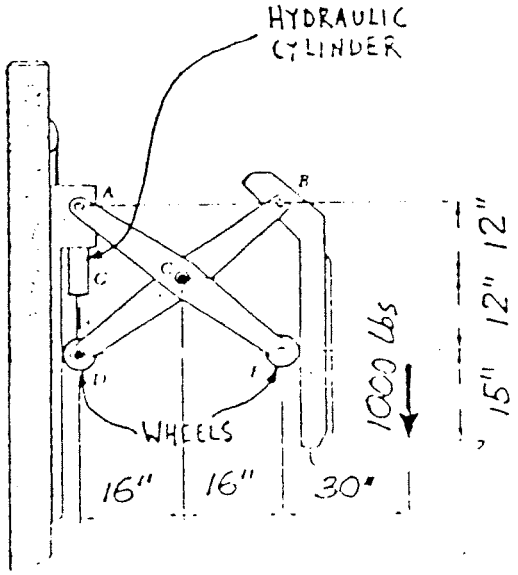
3. Two identical linkage-and-hydraulic-cylinder systems control the position of the forks for a fork-lift truck; only one system is shown.

Knowing that the load supported by the one system shown is 1000 lbs, determine

a) The force exerted by the hydraulic cylinder on point D,

b) The components of the force exerted on member ACE at pin C.

?



A, B and C are simple pins

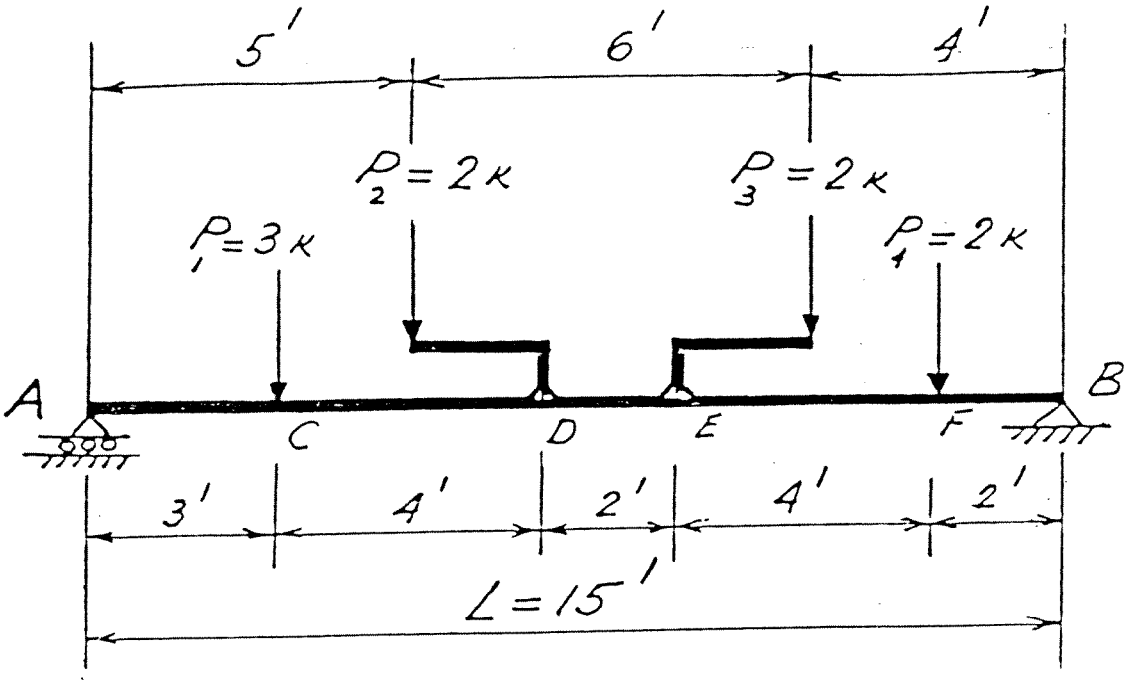
$D = A_x = 2583.3$ lbs

$C_x = -3833$ lbs

$C_y = -1000$ lbs

4. Draw the shear and bending-moment diagram for the beam AB.

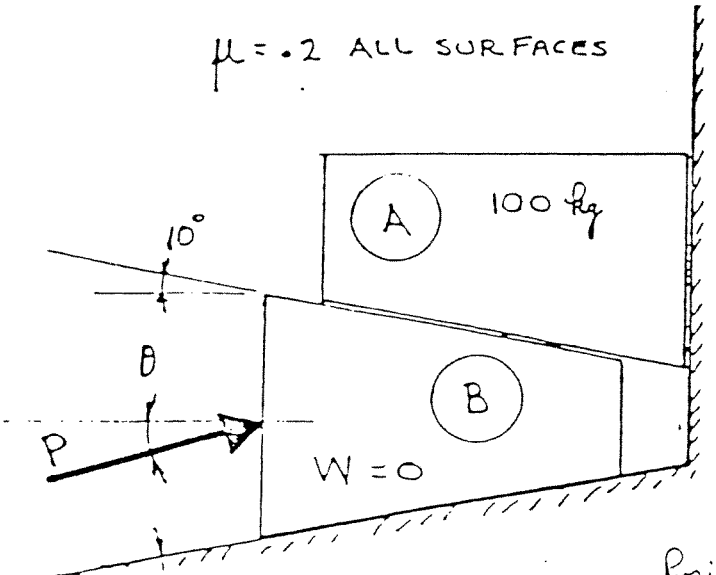
later



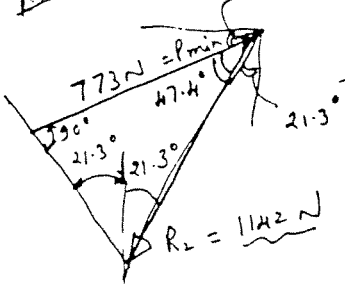
5. For the system shown determine the minimum value of the force P to cause impending upward motion of block A having a mass of 100 kg. What angle does the force P make with the horizontal?

Assume that block B is weightless and that the coefficient of static friction is equal to 0.2 for all contact surfaces.

2.



Ans:



$P_{min} = 773 N$

Ans:

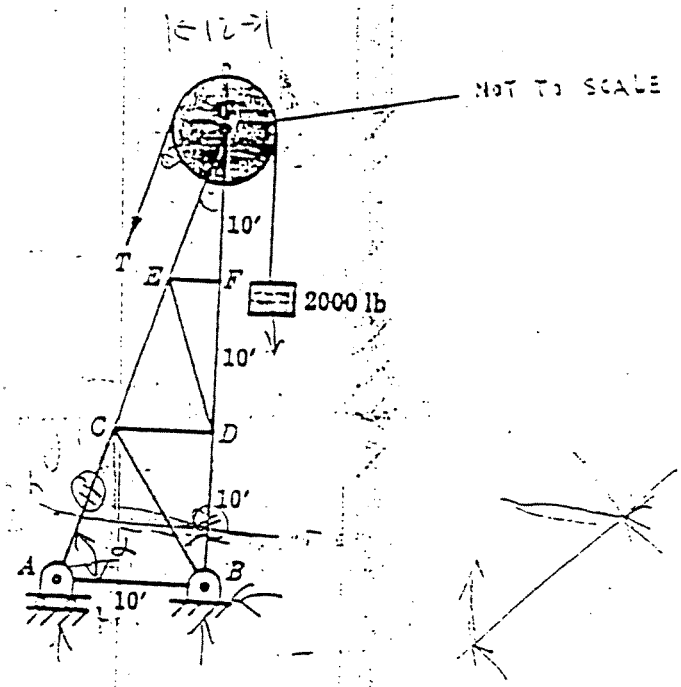
SPECIAL INSTRUCTIONS

Do any five questions:

All questions carry equal weight.

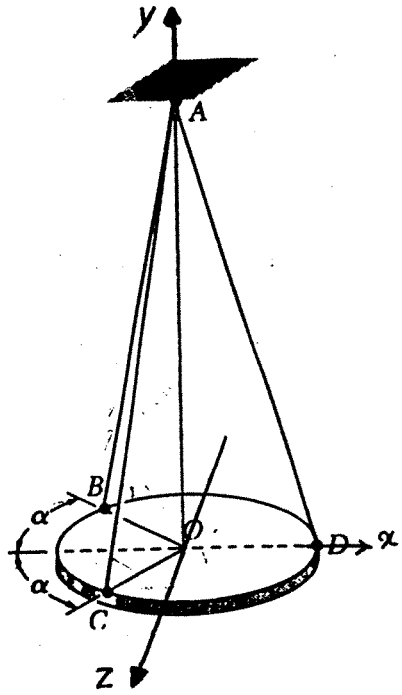
Question 1:

The steel cable is hoisting a 2000 lb weight. The diameter of the pulley is 12 inches. Determine the forces in AC and BD assuming the cable is parallel to the sides of the truss as shown.



$\alpha = 71.56$

1-(a) A **10 kg** circular plate of **200-mm** radius is supported as shown by three wires of equal length L. Knowing that $\alpha = 65°$, determine the smallest permisible value of the length L if tension not to exceed **45 N** in any of the wire. (30 marks)



$$\Sigma F_z = 0 \Rightarrow -T_{AC}\cos\theta\sin\alpha + T_{AB}\cos\theta\sin\alpha = 0$$

$$\Rightarrow T_{AC} = T_{AB} = T_1$$

$$\Sigma F_x = 0 \Rightarrow T_{AC}\cdot\cos\theta\cos\alpha + T_{AB}\cos\theta\cos\alpha - T_{AD}\cos\theta = 0$$

$$\cos\alpha\left(T_{AC} + T_{AB}\right) - T_{AD} = 0 \;,\; \left(T_{AD} = T_2\right) \Rightarrow$$

$$T_1 = 1.183\,T_2 \Rightarrow T_1 > T_2 \Rightarrow T_1 = 45\,N \Rightarrow T_2 = 38\,N$$

$$\Sigma F_y = 0 \Rightarrow T_1\sin\theta + T_1\sin\theta + T_2\sin\theta - W = 0 \Rightarrow$$

$$\sin\theta\left(2T_1 + T_2\right) = W \Rightarrow \sin\theta = \frac{W}{2T_1 + T_2} = \frac{10\times 9.81}{2\times 45 + 38} = 0.766$$

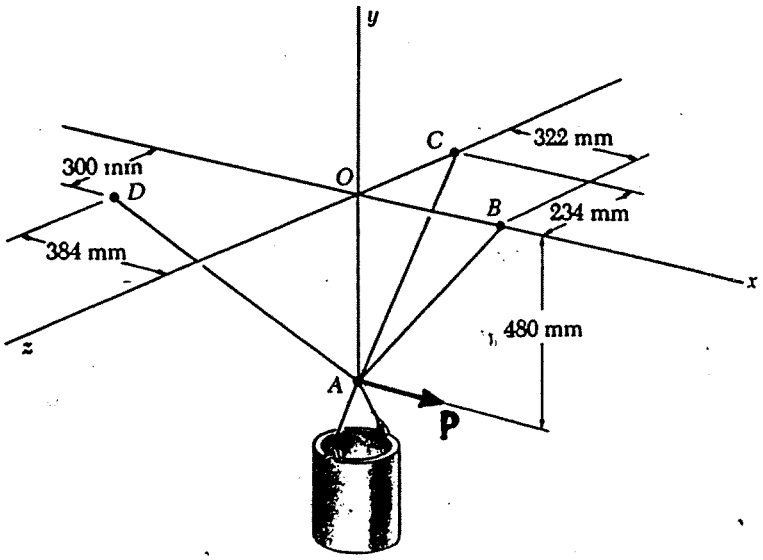
$$\Rightarrow \theta = 50^\circ$$

$$\cos\theta = \frac{r}{l} \Rightarrow l = \frac{r}{\cos\theta} = \frac{0.2}{0.643} \Rightarrow \underline{l = 0.311\ m}$$

1-(b) A container is supported by three cables and a single force **P** exerted at **A** as shown.

a)- Determine the angle between cables **AD** and **AC**. (10 marks)

b)- Determine the weight **W** of the container, knowing that the tension in cable **AB** is **zero** ($T_{AB}=0$) and **P=250 N**. (20 marks)



$A\begin{pmatrix}0\\-.48\,m\\0\end{pmatrix}\ B\begin{pmatrix}.322\,m\\0\\0\end{pmatrix}\ C\begin{pmatrix}0\\0\\-.234\,m\end{pmatrix}$

$D\begin{pmatrix}-.384\,m\\0\\.3\,m\end{pmatrix}$

a) $\vec{AD} = -.384\vec{i} + .48\vec{j} + .3\vec{k}$

$\vec{AC} = .48\vec{j} - .234\vec{k}$

$$\cos\theta = \frac{\vec{AD}\cdot\vec{AC}}{|\vec{AD}|\cdot|\vec{AC}|} = \frac{x_{AD}\cdot x_{AC} + y_{AD}\cdot y_{AC} + z_{AD}\cdot z_{AC}}{|\vec{AD}|\cdot|\vec{AC}|} = \frac{.1602}{.684 \times .539} = .439 \Rightarrow \underline{\theta = 64^\circ}$$

b) $\vec{T}_{AD} = T_{AD}\cdot\frac{\vec{AD}}{AD} = T_{AD}\left(-.561\vec{i} + .702\vec{j} + .439\vec{k}\right)$

$\vec{T}_{AC} = T_{AC}\cdot\frac{\vec{AC}}{AC} = T_{AC}\left(.899\vec{j} - .438\vec{k}\right)$, $\vec{P} = 250\vec{i}$, $\vec{W} = -W\vec{j}$

$\vec{R} = \Sigma F = 0 \Rightarrow \vec{R} = \vec{T}_{AD} + \vec{T}_{AC} + \vec{P} + \vec{W} \Rightarrow$

$$R = \underbrace{\left(-.561T_{AD} + 250\right)}_{R_x}\vec{i} + \underbrace{\left(.702T_{AD} + .899T_{AC} - W\right)}_{R_y}\vec{j} + \underbrace{\left(.439T_{AD} - .438T_{AC}\right)}_{R_z} = 0$$

$R_x = 0 \rightarrow -.561T_{AD} + 250 = 0 \Rightarrow T_{AD} = 446\ N$

$R_y = 0 \rightarrow .702T_{AD} + .899T_{AC} - W = 0$

$\Rightarrow W = 715\ N$

$R_z = 0 \rightarrow .439T_{AD} - .438T_{AC} = 0 \Rightarrow T_{AC} = 447\ N$

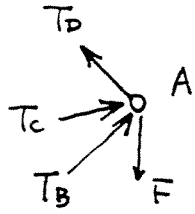
Test # 1, ENGR 242/V, 1996

1.



$\vec{AD} = 0\vec{i} - 6\vec{j} + 3\vec{k}$ $\quad\therefore\quad AD = \sqrt{45}$

$\vec{BA} = -2 + 6 + 2$ $\quad BA = \sqrt{44}$

$\vec{CA} = 3 + 6 + 2$ $\quad CA = 7$

$\Sigma \vec{F} = 0$

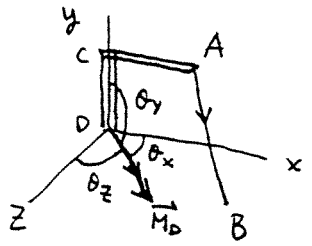
$x: \quad -\frac{2}{\sqrt{44}} T_B + \frac{3}{7} T_C = 0$

$y: \quad -\frac{6}{\sqrt{45}} T_D + \frac{6}{\sqrt{44}} T_B + \frac{6}{7} T_C = 0$

$z: \quad \frac{3}{\sqrt{45}} T_D + \frac{2}{\sqrt{44}} T_B + \frac{2}{7} T_C = 1250$

$\therefore\ T_D = 1677$ kN, $T_B = 995$ kN, $T_C = 700$ kN ◁

2.



(a) $\vec{r} = \vec{DB} = 3\vec{i} + \vec{k}$

$\vec{F} = 2\,\vec{AB}/AB = 2(\vec{i} - 2\vec{j} + \vec{k})/\sqrt{1^2 + (-2)^2 + 1^2}$

$= \frac{2}{\sqrt{6}}(\vec{i} - 2\vec{j} + \vec{k})$

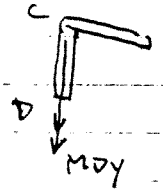
$$\vec{M}_D = \vec{r} \times \vec{F} = \frac{2}{\sqrt{6}} \begin{vmatrix} \vec{i} & \vec{j} & \vec{k} \\ 3 & 0 & 1 \\ 1 & -2 & 1 \end{vmatrix}$$

$= \frac{4}{\sqrt{6}}(\vec{i} - \vec{j} - 3\vec{k})$ (kN·m)

Magnitude: $M_D = \frac{4}{\sqrt{6}}\sqrt{1^2 + (-1)^2 + (-3)^2} = \frac{4}{\sqrt{6}}\sqrt{11} = 5.42$ (kN·m) ◁

Direction: $\theta_x = \cos^{-1}\left(\frac{1}{\sqrt{11}}\right) = 72°$; $\theta_y = \cos^{-1}\left(\frac{-1}{\sqrt{11}}\right) = 108°$; $\theta_z = \cos^{-1}\left(\frac{-3}{\sqrt{11}}\right) = 155°$ ◁

(b) about CD: $M_{DY} = -\frac{4}{\sqrt{6}} = -1.63$ (kN·m) ◁



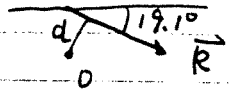
Sense: ↓ ◁

3. (a) $R_x = (200 + 300)\cos 30° = 433$ N

$R_y = (200 + 300)\sin 30° - 400 = -150$ N

$\therefore\ R = \sqrt{R_x^2 + R_y^2} = 458.3$ (N) ◁

$\theta = \tan^{-1}\left(\frac{R_y}{R_x}\right) = -19.1°$



◁

(b) $\curvearrowleft M_O = -300(1) + 200(1) + 400(2\cos 30°) - 300$

$= 292.8$ (N·m)

$= d\,R$

$\therefore\ d = 292.8/458.3 = 0.64$ (m) ◁

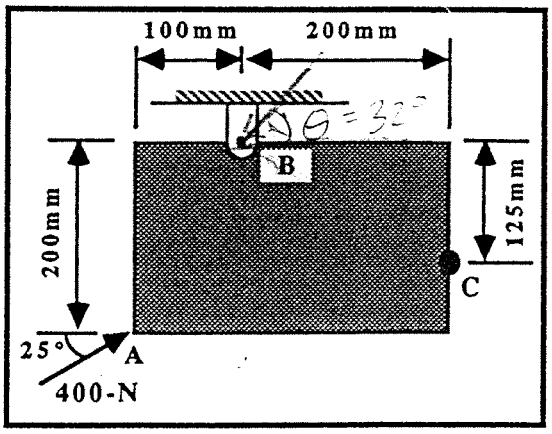
Problem 2 (4 marks) [8 minutes]

A 400-N force is applied at A as shown. Determine:
(a) the moment of the 400-N force about B,
(b) the smallest force applied at B which creates the same moment about C.



a) $M_B = F \cdot d$

$= F \cdot r \cdot \sin\theta$

$= \bar{r} \times \bar{F}$

$F_x = \cos 25° \, F = 362.5 N$

$F_y = \sin 25° \, F = 169.0 N$

3

$r = -0.1\,i - 0.2\,j$

$M_B = (-0.1\,i - 0.2\,j) \times (365.2, 169.0)$

$= -16.9\,k + 73.0\,k = \underline{56.1 \text{ Nm } (+k)}$

b) $56.1 = F \cdot d$ $\quad d = \sqrt{(0.2)^2 + (0.125)^2}$

$= 0.24 m$

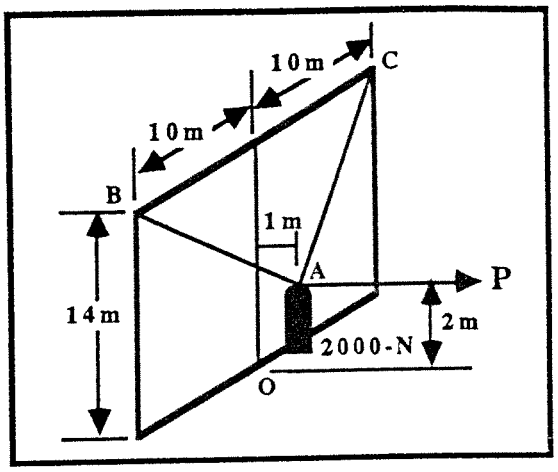
$F = \frac{56.1}{0.24} = \underline{236 N}$

$\theta = \underline{32°}$ (see diagram)

Name: _____ Given Name: _____ I.D.: _____

Problem 3 (8 marks) [30 minutes]

A 2000-N cylinder is hung by means of two cables AB and AC, which are attached to the top of a vertical wall. A horizontal force P perpendicular to the wall holds the cylinder in the position shown. Determine the magnitude of P and the tension in each cable. Consider point O as origin.



$W = 2000\ N$

$\overline{AB} = \overline{AC} = 15.65\ m$

$T_{ABx} + T_{ACx} = P$

$T_{ABy} + T_{ACy} = W = 2000N$

$T_{ABz} = T_{ACz}$

$\therefore \quad T_{AB} = T_{AC}$

$P = 0.64\,T_{AB} + 0.64\,T_{AC}$

$2000 = 0.77\,T_{AB} + 0.77\,T_{AC}$

$P = 1.28\,T_{AB}$

$2000 = 1.54\,T_{AB}$

$T_{AB} = T_{AC} = 1299\ N$ ✓

$P = (1.28)(1299) = 1662\ N$ ✗

$T_{ABz} = \frac{10}{15.65} T_{AB} = 0.64\,T_{AB}$

$T_{ABx} = \frac{1}{15.65} T_{AB} = 0.064\,T_{AB}$

$T_{ABy} = \frac{12}{15.65} T_{AB} = 0.77\,T_{AB}$

$T_{ACy} = 0.77\,T_{AC}$

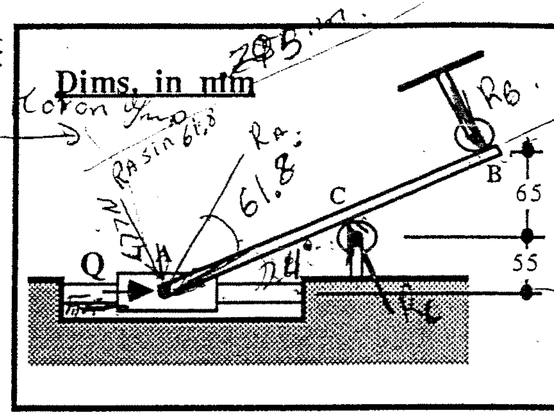
$T_{ACx} = 0.064\,T_{AC}$

$T_{ACz} = 0.64\,T_{AC}$

7

Problem 4 (10 marks) [25 minutes]

A slender rod AB 295 mm long attached to a collar at A and resting on wheels B and C. The coefficient of static friction between the collar and the horizontal rod is 0.35. Neglecting the friction at the wheels and knowing that the maximum friction force at A is 77 N when motion impending to the right, determine the value of the force Q and the reactions at A, B, and C.



$\mu_{sm} = .35$

$F_m = 77N$.

$F_m = \mu N = .35 N \quad N = \frac{77}{.35} = 220N$

$R = \sqrt{77^2 + 220^2} = 223.1N$

$\phi = \tan^{-1}\mu = 19.3°$

~~$\Sigma y = 0$. $F_A \sin 24 = N$~~

~~$F_A = \frac{220}{\sin 24} = 541N$~~ ok.

~~$\Sigma x = 0$. $Q = 77N + \cos 24 (541) = 571N$~~

~~$R_A = 541N$ at 24°~~ ok

3

neatness please

$$\frac{541}{\sin 109.3} = \frac{571}{\sin\theta} = \frac{223.1}{\sin\phi}$$

$\theta = 85.8°$.

$R_A = 541N$ at $85.8°$

$\Sigma M_C = 0$.

$477(.035) = R_B(.160)$. $R_B = 402N$

$\frac{.055}{AC} = \sin$

$AC = .035$

Class Examples

#1-

6.100 Water pressure in the supply system exerts a downward force of 30 lb on the vertical plug at *A*. Determine the tension in the fusible link *DE* and the force exerted on member *BCE* at *B*.

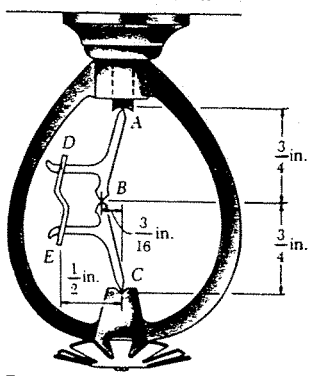

Fig. P6.100

#2-

6.114 The tool shown is used to crimp terminals onto electric wires. Knowing that a worker will apply forces of magnitude $P = 135$ N to the handles, determine the magnitude of the crimping forces which will be exerted on the terminal.

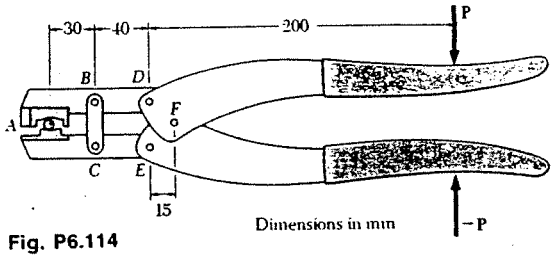

Fig. P6.114

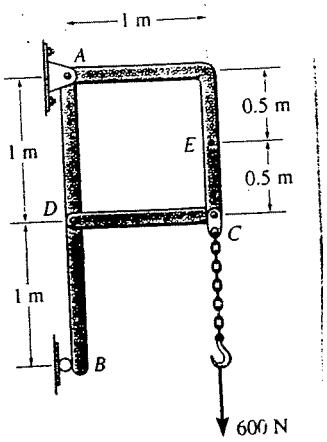
#3-

Determine the normal force, shear force, and bending moment acting at point *E* of the frame loaded as shown in Fig. 7–8*a*.



Class Examples (2)

#1 A bar is bent and loaded as shown in Fig. 4-21. Determine

a. The moment of force **F** about point *O*.
b. The perpendicular distance *d* from point *O* to the line of action of the force.

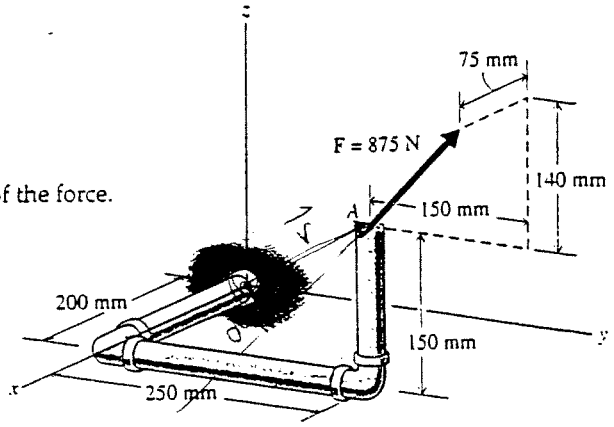


Fig. 4-21

#2 The force **F** in Fig. 4-27 can be expressed in Cartesian vector form as

$$\mathbf{F} = 60\mathbf{i} + 100\mathbf{j} + 120\mathbf{k}\ \text{lb}$$

Determine the moment of force **F** about line *BC*.

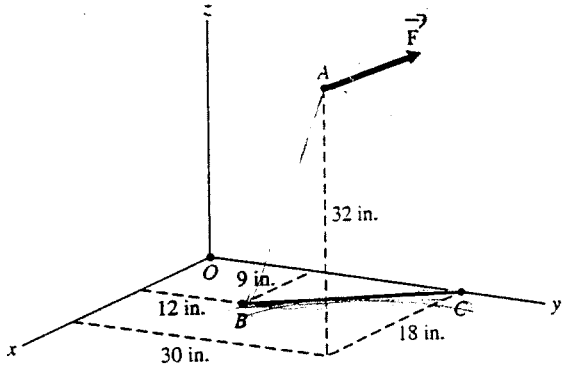

Fig. 4-27

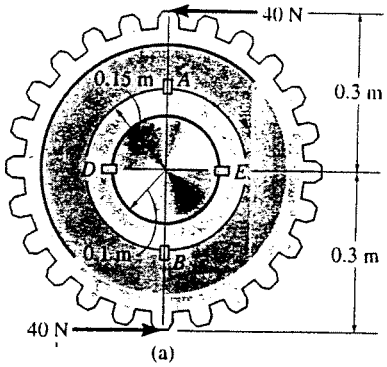
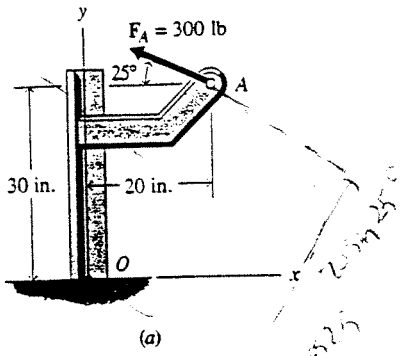
#3 A couple acts on the gear teeth as shown in Fig. 4–31*a*. Replace it by an equivalent couple having a pair of forces that act through (a) points *A* and *B*, and (b) points *D* and *E*.



(a)

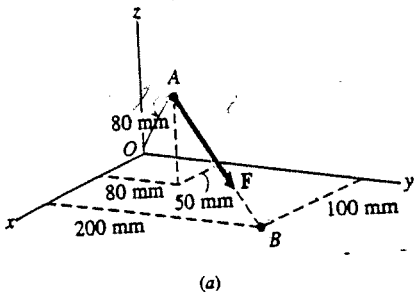
Class Examples 3

#1 A 300-lb force F_A is applied to a bracket at point A as shown in Fig. 4-37*a*. Replace the force F_A by a force F_O and a couple C at point O.

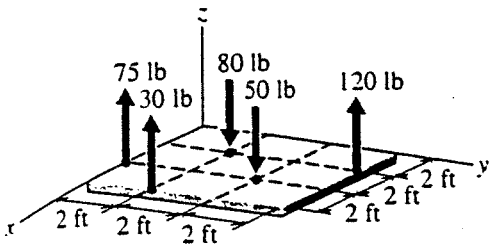


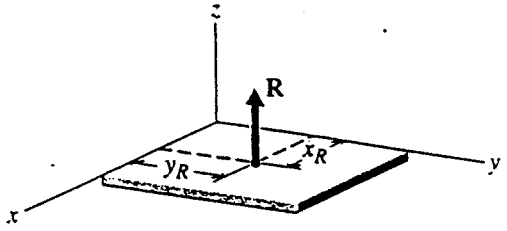
#2 The force **F** shown in Fig. 4-38*a* has a magnitude of 763 N. Replace the force **F** by a force F_O at point O and a couple **C**.

Express the force F_O and the couple **C** in Cartesian vector form.
Determine the direction angles θ_x, θ_y, and θ_z associated with the couple vector.



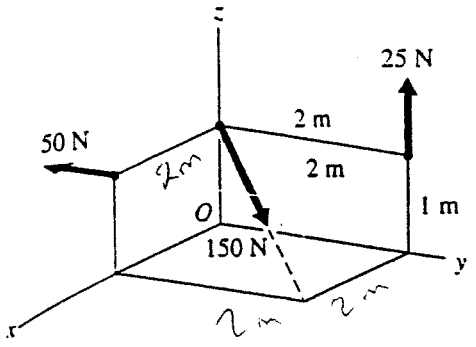
#3 Determine the resultant of the parallel force system shown in Fig. 4-44*a* and locate the intersection of the line of action of the resultant with the *xy*-plane.





#4 Three forces are applied to a rigid body as shown in Fig. 4-50*a*.

a. Reduce the forces to a wrench.
b. Determine the intersection of the wrench with the *xy*-plane.



Class Examples

#1 Locate the center of gravity for the six particles shown in Fig. 5-5 if W_A = 50 lb, W_B = 25 lb, W_C = 30 lb, W_D = 35 lb, W_E = 20 lb, and W_F = 40 lb.

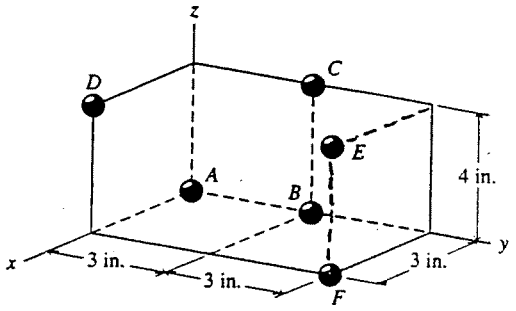


Fig. 5-5

#2 Locate the center of gravity G of the homogeneous right circular cone shown in Fig. 5-11*a*, which has an altitude h and radius r and is made of a material with a specific weight γ.

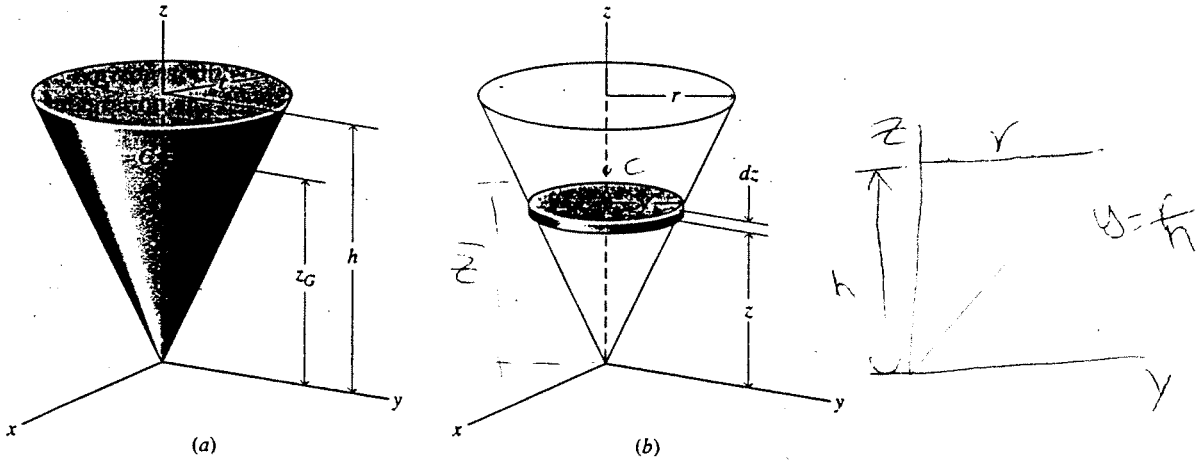

Fig. 5-11

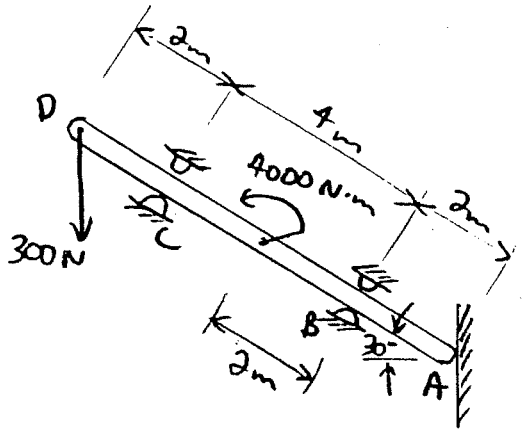
Rjaffal@hotmail.com

Lec-5

Class Examples

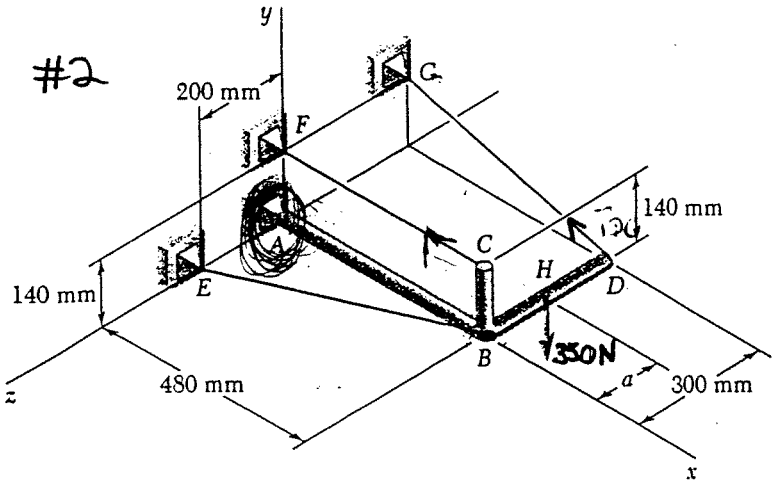
#1 A uniform beam is subjected to a force and a couple. If the beam is supported at A by a smooth wall and at B and C either at the top or bottom by smooth contacts, find the reactions at these supports.



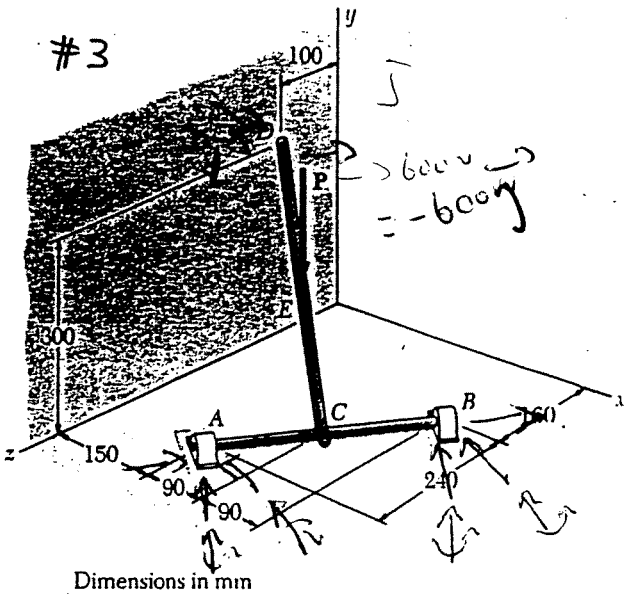
#2 Frame *ABCD* is supported by a ball-and-socket joint at *A* and by three cables. For $a = 150$ mm, determine the tension in each cable and the reaction at *A*.

#3 Two rods are welded together to form a T-shaped lever which leans against a frictionless vertical wall at *D* and is supported by bearings at *A* and *B*. A vertical force P of magnitude 600 N is applied at the midpoint *E* of rod *DC*. Determine the reaction at *D*.

#2



#3



Class Examples

#1

2.91 Find the magnitude and direction of the resultant of the two forces shown knowing that $P = 300$ N and $Q = 400$ N.

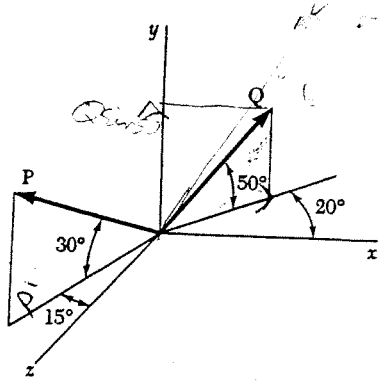


Fig. P2.91 and P2.92

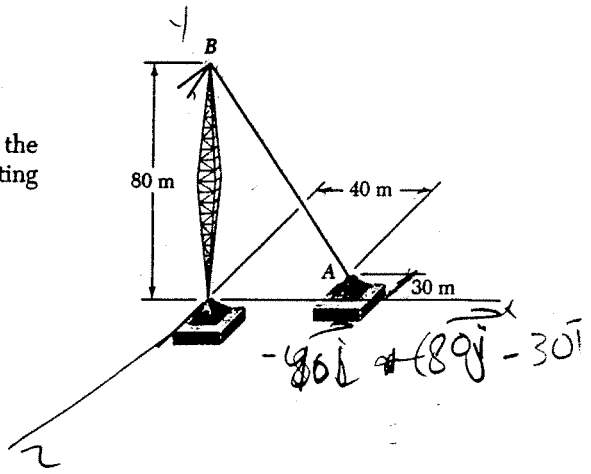
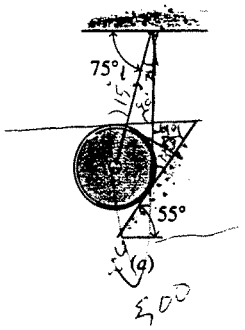
#2

A tower guy wire is anchored by means of a bolt at A. The tension in the wire is 2500 N. Determine (*a*) the components F_x, F_y, F_z of the force acting on the bolt, (*b*) the angles θ_x, θ_y, θ_z defining the direction of the force.



#3

(3) A homogeneous steel cylinder weighing 500 lb is supported by a flexible cable and a smooth inclined plane as shown in Fig. 3-3*a*. Determine the tension T in the cable and the force R exerted by the inclined plane on the cylinder.



#4

(VI) *Four forces act on a small airplane in flight, as shown in Fig. CE3-2: its weight, the thrust provided by the engine, the lift provided by the wings, and the drag resulting from its motion through the air. Is it possible for the plane to be in equilibrium under the action of these four forces?*

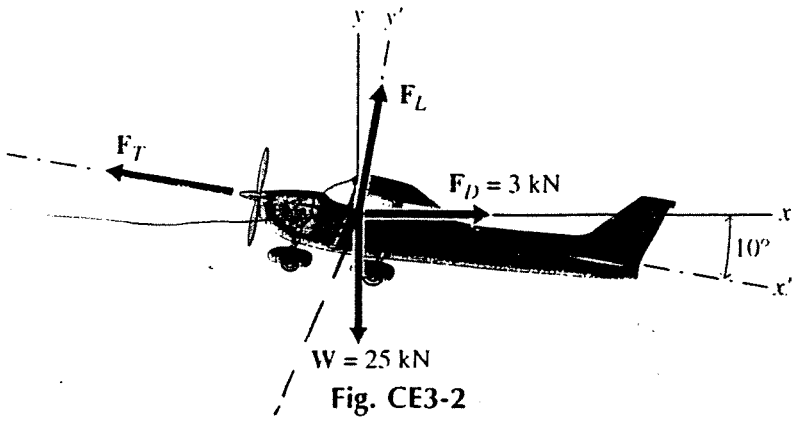


Fig. CE3-2

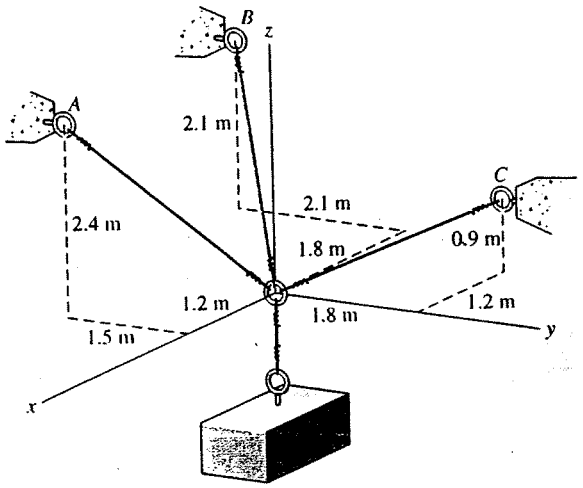
#5 A block is supported by a system of cables as shown in Fig. 3-6*a*. The weight of the block is 500 N. Determine the tensions in cables *A*, *B*, and *C*.



(*a*)

UNIVERSITY

COURSE: STATICS	NUMBER: ENGR C 242/2	SECTION: 01, V, W, X, AA	
EXAMINATION: SUPPLEMENTAL	DATE	TIME	# OF PAGES: 3
INSTRUCTOR: Profs. Goldman, Stathopoulos		DIVISION: Day and Evening	

MATERIALS ALLOWED:

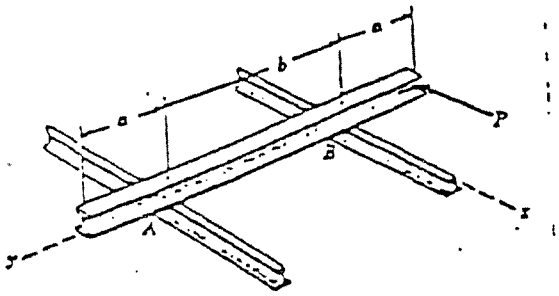
Any Calculating Device.

SPECIAL INSTRUCTIONS:

Attempt all problems.

All questions carry equal weight.

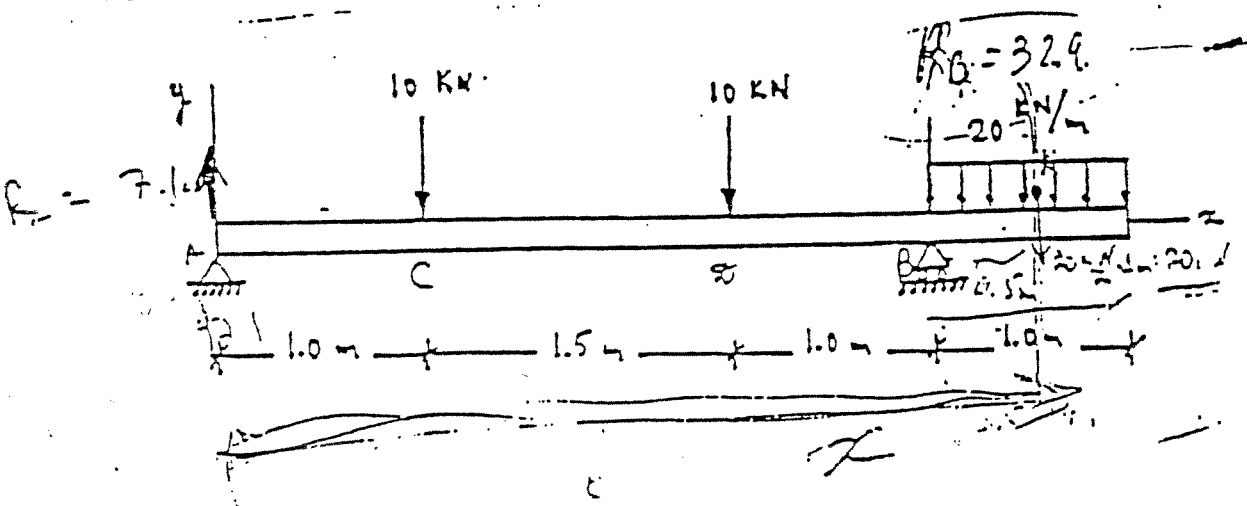
1.- An I-beam of mass m is supported by two fixed horizontal rails as shown. Compute the applied load P that is just sufficient to cause the beam to slip and determine the corresponding friction force at A as slippage begins. The coefficient of friction between the beam and the rails is f.



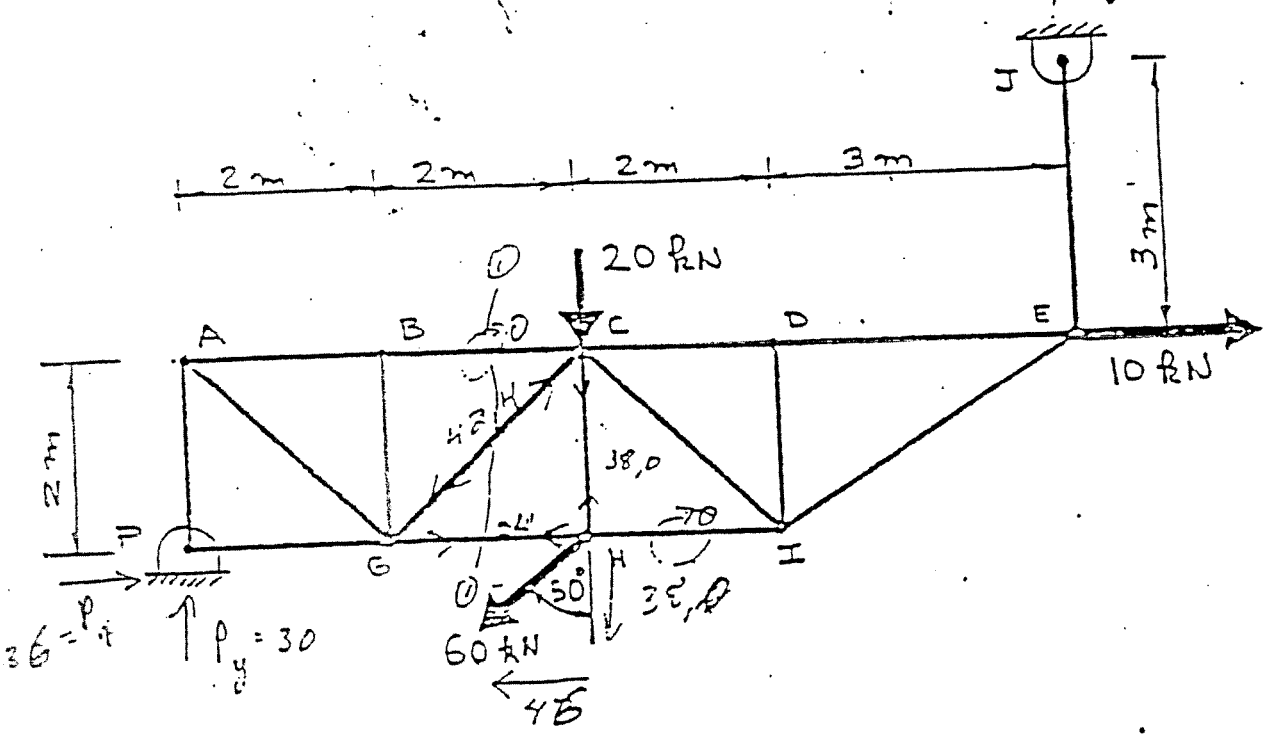
2.- For the beam shown:

a.- Draw the shear and bending moment diagrams.

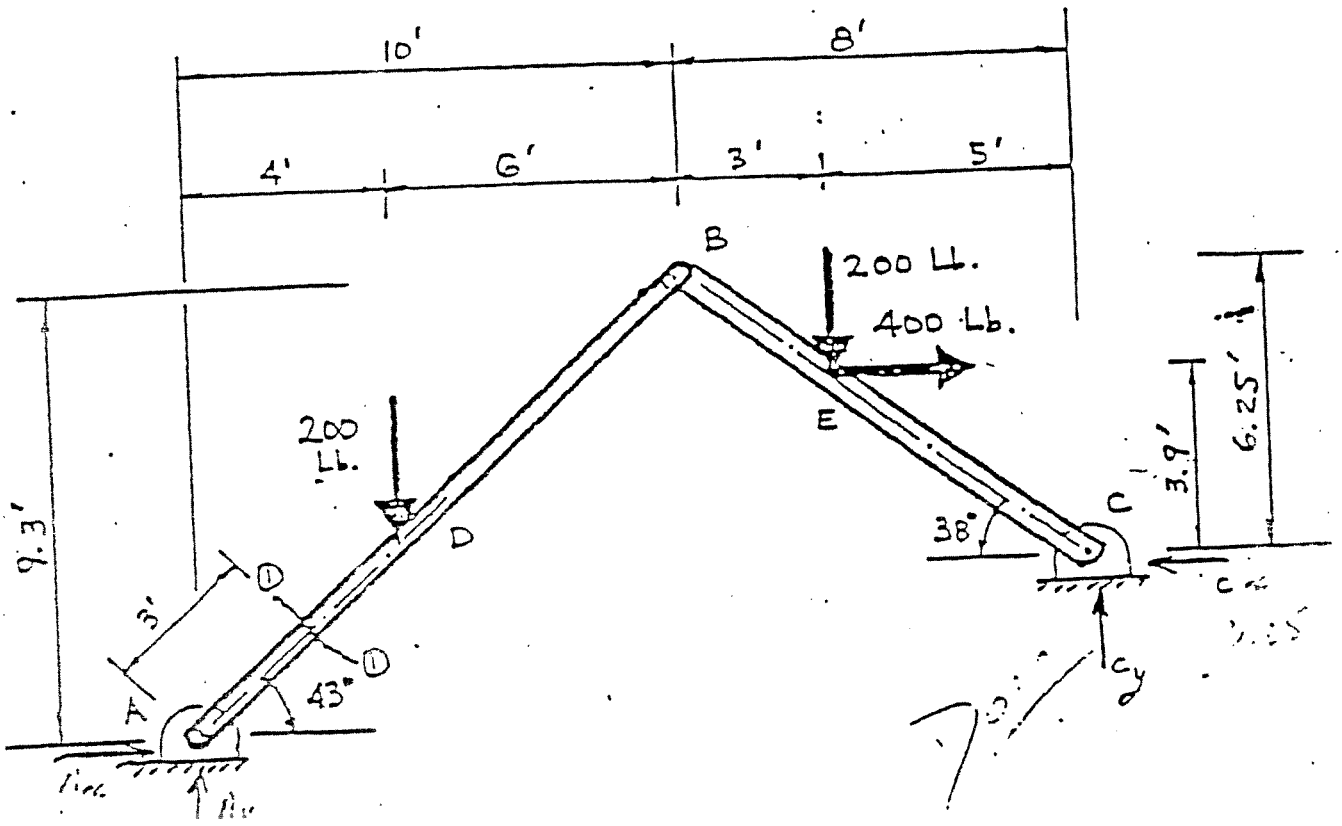
b.- Write the shear and bending moment equations for $3.5 < x \leq 4.5$



- For the truss shown, calculate the reactions at J and P. Calculate the forces in members BC, CH, CG and HI. Show the values on the sketch of the truss indicating whether tension or compression.



(4.) For the frame shown obtain the reactions at A and C. Check if the frame is in equilibrium. At section 1-1, obtain axial and shear forces and bending moment.

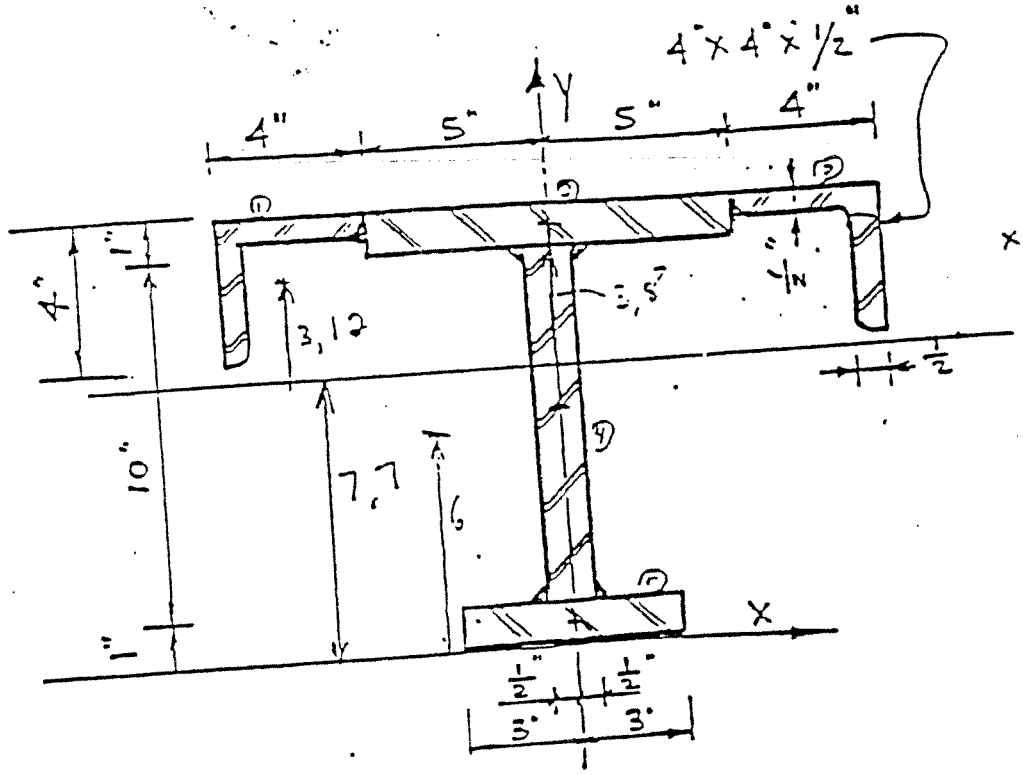


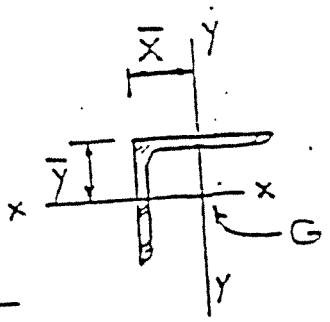
For the cross-section of the beam indicated:

a.- Obtain the location of the centroid.

b.- Obtain the moment of inertia of the area with respect to an axis parallel to the X axis and passing through the centroid..

c.- Obtain the radius of gyration of the area with respect to the same axis as in b.- above.

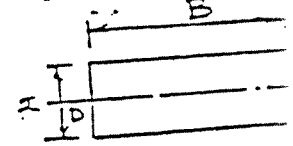




AREA = 3.75 IN^2

I_x = 5.6 IN^4 =

$\bar{X} = \bar{Y}$ = 1.18 IN.



$I_{xx} = \frac{BD^3}{12}$

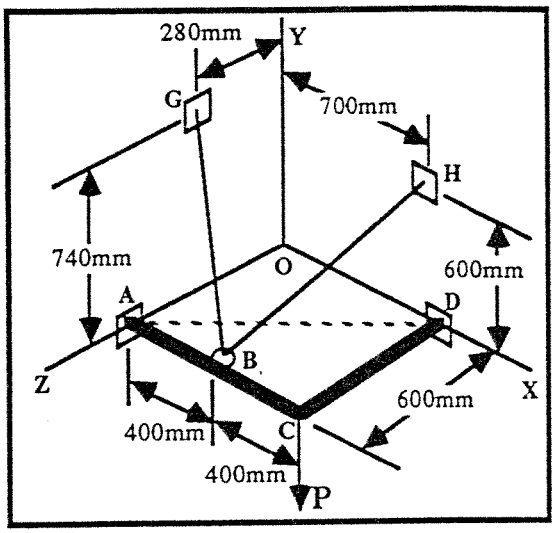
Problem 4 (8 marks) [22 minutes]

The frame ACD is hinged at A and D and supported by a cable which passes through a ring at B and is attached to hooks at G and H. The tension in the cable is 1125 N, determine the moment about the diagonal AD of the force exerted on the frame by portion BH of the cable.



$\overrightarrow{BH} = 960\ mm$

$T_{BHx} = 375\ N$

$T_{BHy} = 750\ N$

$T_{BHz} = -750\ N$

$\overrightarrow{AD} = \sqrt{(800)^2+(600)^2}$ ✓

$= 1000\ mm = 1\ m$

$\lambda_i = \frac{800}{1000} = 0.8 \quad \lambda_j = 0 \quad \lambda_k = -0.6$ ✓

$r_{A/B} = 0.4\ m\ i + 0\ j - 0\ k$

8

$$M_{AD} = \begin{vmatrix} 0.8 & 0 & -0.6 & 0.8 & 0 \\ 0.4 & 0 & 0 & 0.4 & 0 \\ 375 & 750 & -750 & 375 & 750 \end{vmatrix}$$

$-180\ k$

$M_{AD} = -180\ kNm$ ✓

ΣF

ENGR C242/3 Section X Test #3 Solutions

1) Joint J : $S_{IJ} = 0$; Joint G : $S_{GH} = -4\ kN\ (C)$; Vertical section through EH yields :

$$S_{EH}\frac{4}{5} - 4 - 4 = 0 \Rightarrow S_{EH} = 10\ kN\ (T)$$

2) 
$$\Sigma M_A = 0 = P \times 105 - Q \times 30 \Rightarrow Q = 3.5\,P$$

$$\Sigma M_B = 0 = R \times 35 - Q \times 80 \Rightarrow R = \frac{3.5P \times 80}{35} = 8P$$

3) See solution of assigned problem # 7.66
