

1. How do views of environmental risk differ among the four myths of nature?

The environmental risks are differ among those myths because they have different views on natures and resources. This is because their view on nature and resources are related with the risk of the environmental. The environmental risk also depends on the culture and judgement of people (their thought).

2. Which **one** of the views of nature best represents your view of environmental risk?

I believe the best myth that represent my view of environment risk is Nature Benign (individualist). Environmental risk are seen as an opportunity for me to develop the technology.
