CP-4 Submit a short individual proposal for one of these cases:

Case 1:

Task:

Learning or Traveling

Choose people and interaction technology

Answer: Task-Traveling People-Photographers Technology-3D Cameras

My proposal

Photographers can use 3D cameras while travelling. As they know the maximum functionalities of the different cameras they can use the maximum features of 3D cameras. It can be an awesome experience as well. 3D cameras have an excellent shoot functionalities due to which photographers can capture the realistic videos, images for their wonderful memories. For example, there should be a self-timer in specialized 3D cameras so that the photographer itself can be in a picture. When they visit any historical monuments all around the world while travelling, they can capture the beautiful carvings, design of walls, various shapes and can also shoot the artifacts. Due to its excellent optical zoom feature we can know how the design is made. And they can depict these religious importance of a particular monument to the outside world by arranging the art or photo exhibition of their captured photographs. In these way different people of different religions can know and understand the various cultures and thoughts of other people.
