

1. For a **homogeneous** system of 1500 equations in 2015 unknowns, answer the following three questions:

- Can the system be inconsistent? NO
- Can the system have infinitely many solutions?
- Can the system have exactly one solution?

- A. No, Yes, No.
- B. Yes, Yes, Yes.
- C. Yes, Yes, No.
- D. No, No, No.
- E. Yes, No, Yes.
- F. No, No, Yes.

YES
NO, since $\text{rank } A \leq 1500$,
parameters $\geq 2015 - 1500 > 0$.

2. Suppose $A = \begin{bmatrix} 1 & 1 & 1 \\ 0 & 1 & 1 \\ 1 & 0 & 1 \end{bmatrix}$. Which one of the following statements is true?

- A. A^{-1} does not exist.
- B. The third row vector of A^{-1} is $(-1, 1, 1)$.
- C. The second row vector of A^{-1} is $(0, 1, 1)$.
- D. The first row vector of A^{-1} is $(1, -1, 2)$.
- E. The second column vector of A^{-1} is $(0, 2, -1)$.
- F. The first column vector of A^{-1} is $(1, 2, -1)$.

$$[A | I_3] = \left[\begin{array}{ccc|ccc} 1 & 1 & 1 & 1 & 0 & 0 \\ 0 & 1 & 1 & 0 & 1 & 0 \\ 1 & 0 & 1 & 0 & 0 & 1 \end{array} \right] \sim \left[\begin{array}{ccc|ccc} 1 & 1 & 1 & 1 & 0 & 0 \\ 0 & 1 & 1 & 0 & 1 & 0 \\ 0 & -1 & 0 & -1 & 0 & 1 \end{array} \right]$$

$$\sim \left[\begin{array}{ccc|ccc} 1 & 1 & 1 & 1 & 0 & 0 \\ 0 & -1 & 0 & -1 & 0 & 1 \\ 0 & 1 & 1 & 0 & 1 & 0 \end{array} \right] \sim \left[\begin{array}{ccc|ccc} 1 & 1 & 1 & * & * & * \\ 0 & -1 & 0 & -1 & 0 & 1 \\ 0 & 0 & 1 & -1 & 1 & 1 \end{array} \right]$$

3. Let A be a 13×8 matrix such that $\text{rank } A = 6$. As usual, $\ker A = \{x \in \mathbf{R}^8 \mid Ax = 0\}$ and $\text{col } A = \{Ax \mid x \in \mathbf{R}^8\}$. Which of the following statements is true?

- A. $\dim \text{col } A = 6$, and $\dim \ker A = 1$
- B. $\text{col } A = \mathbf{R}^{13}$, and $\dim \ker A = 6$
- C. $\text{col } A = \mathbf{R}^8$, and $\dim \ker A = 5$
- ☒ D. $\dim \text{col } A = 6$, and $\dim \ker A = 2$
- E. $\dim \text{col } A = 6$, and $\dim \ker A = 7$
- F. $\text{col } A = \{0\}$, and $\dim \ker A = 7$

$$\text{rank } A = 6 \Leftrightarrow$$

$$\dim \text{col } A = 6$$

$$\text{rank } A = 6$$

$$\Rightarrow \dim \ker A = 8 - 6 = 2$$

4. Let $X = \{(x, y, z) \in \mathbf{R}^3 \mid x + y = 0\}$. Which one of the following statements is true?

- A. X is a subspace of $\mathbf{R}^3$ and $\dim X = 3$. ✗
- B. X is a subspace of $\mathbf{R}^2$ and $\dim X = 1$. ✗
- ☒ C. X is a plane in $\mathbf{R}^3$ through the origin which is parallel to the z -axis. ✓
- D. X is not a subspace of $\mathbf{R}^3$. ✗
- E. X is a line through the origin in $\mathbf{R}^3$. ✗
- F. X is a plane in $\mathbf{R}^3$ through the origin which is parallel to the x -axis. ✗

5. Recall that A^t denotes the transpose of the matrix A . The dimension of

$$S = \{A \in M_{33}(\mathbf{R}) \mid A = -A^t\}$$

is:

- A. 1
- B. 2
- C. 3
- D. 4
- E. 6
- F. 9

$$A \begin{bmatrix} a & b & c \\ d & e & f \\ g & h & i \end{bmatrix} = - \begin{bmatrix} a & d & g \\ b & e & h \\ c & f & i \end{bmatrix} \Rightarrow A = \begin{bmatrix} 0 & b & c \\ -b & 0 & f \\ -c & -f & 0 \end{bmatrix}$$

$$\therefore S = \text{span} \left\{ \begin{bmatrix} 0 & 1 & 0 \\ -1 & 0 & 0 \\ 0 & 0 & 0 \end{bmatrix}, \begin{bmatrix} 0 & 0 & 1 \\ 0 & 0 & 0 \\ -1 & 0 & 0 \end{bmatrix}, \begin{bmatrix} 0 & 0 & 0 \\ 0 & 0 & 1 \\ 0 & -1 & 0 \end{bmatrix} \right\}$$

and the spanning set is LI. $\therefore$

$$\dim S = 3$$

6. Which two of the following statements are true?

- I. $\{2\sin^2 x, 3\cos^2 x, 2\}$ is linearly independent in $\mathbf{F}(\mathbf{R}) = \{f \mid f: \mathbf{R} \rightarrow \mathbf{R}\}$. F
- II. $\mathbf{R}^2$ has a spanning set with 3 vectors. $\checkmark$
- III. The set of all solutions to any homogeneous linear system is a subspace. $\checkmark$
- IV. If u and v are linearly independent vectors in $\mathbf{R}^2$, then $\{u, v\} = \text{span}\{u, v\}$. F

- A. I and II.
- B. I and III.
- C. I and IV.
- D. II and III.
- E. II and IV.
- F. III and IV.

$$I: 2 = 2\sin^2 x + \frac{2}{3} \cdot 3\cos^2 x, \forall x \therefore$$

$$\{2\sin^2 x, 3\cos^2 x, 2\} \text{ is LD.}$$

IV If $\{u, v\}$ is LI, then $u \neq 0, v \neq 0$,
so $\text{span}\{u, v\}$ contains
infinitely many vectors (besides
 u and v .)

7. If $C = \begin{bmatrix} 0 & 3 & 1 \\ 1 & 2 & 1 \end{bmatrix}$ and D is a $3 \times n$ matrix, then the first row of the matrix CD is always

- A. undefined unless $n = 2$.
- B. twice the first row of D .
- C. the same as the first row of D .
- D. the same as the second row of D .
- E. the sum of the first and the second rows of D .
- ☒ F. the sum of three times the second row of D and the third row of D .

$$CD = \begin{bmatrix} 0 & 3 & 1 \\ 1 & 2 & 1 \end{bmatrix} \begin{bmatrix} r_1 \\ r_2 \\ r_3 \end{bmatrix} = \begin{bmatrix} 3r_2 + r_3 \\ r_1 + 2r_2 + r_3 \end{bmatrix}$$

$r_i = i^{\text{th}}$ row of D

8. If $\begin{vmatrix} a & b & c \\ d & e & f \\ g & h & i \end{vmatrix} = 2$, find

$$\begin{vmatrix} b+4c & e+4f & h+4i \\ -3c & -3f & -3i \\ 5a & 5d & 5g \end{vmatrix} = -15 \cdot \begin{vmatrix} b+4c & e+4f & h+4i \\ c & f & i \\ a & d & g \end{vmatrix}$$

- A. -120
- ☒ B. -30
- C. -24
- D. 24
- E. 30
- F. 120

$$= -15 \begin{vmatrix} b & e & h \\ c & f & i \\ a & d & g \end{vmatrix} = 15 \begin{vmatrix} a & d & g \\ c & f & i \\ b & e & h \end{vmatrix}$$

$$= -15 \begin{vmatrix} a & d & g \\ b & e & h \\ c & f & i \end{vmatrix} = -15 \begin{vmatrix} a & b & c \\ d & e & f \\ g & h & i \end{vmatrix} = -15 \cdot 2 = -30$$

9. The vectors $u_1 = (1, 1, 2)$, $u_2 = (1, -1, 0)$, and $u_3 = (1, 1, -1)$ form an orthogonal basis of $\mathbf{R}^3$. If we write $(1, -1, 1) = a_1 u_1 + a_2 u_2 + a_3 u_3$, what is a_2 ?

- A. -1
- ☒ B. 1
- C. $-\frac{\sqrt{2}}{2}$
- D. $\frac{\sqrt{2}}{2}$
- E. $-\frac{1}{3}$
- F. $\frac{1}{3}$

$$a_2 = \frac{(1, -1, 1) \cdot u_2}{\|u_2\|^2}$$

$$= \frac{2}{2} = 1.$$

10. Let A be a 3 by 3 matrix with real entries. Which of the following statements is **equivalent** to

" A is not diagonalizable over the reals." (*)

- A. Not all of the eigenvalues of A are real.
- B. A does not have any real eigenvectors.
- C. A does not have three distinct real eigenvalues.
- ☒ D. A does not have three independent eigenvectors in $\mathbf{R}^3$.
- E. A is upper triangular.
- F. A is not invertible.

A - a matrix can fail to be diag'ble even if all evals are real. eg $B = \begin{bmatrix} 1 & 1 & 0 \\ 0 & 1 & 0 \\ 0 & 0 & 0 \end{bmatrix}$ is not diag'ble (check!)

B. This statement implies (*) but is not implied by (*). A matrix can fail to be diag'ble even if all evals are real - see the example for A.

C. A can be diag'ble even if it has just 1 eval. For example $I_3 = \begin{bmatrix} 1 & 0 & 0 \\ 0 & 1 & 0 \\ 0 & 0 & 1 \end{bmatrix}$ is diag'ble, but has just one eval.

E. See the example in "A"

F. "

11. Consider the network of streets with intersections A, B, C, D, E and F below. The arrows indicate the direction of traffic flow along the **one-way streets**, and the numbers refer to the **exact** number of cars observed to enter or leave A, B, C, D, E and F during one minute. Each x_i denotes the unknown number of cars which passed along the indicated streets during the same period.

- a) Write down a system of linear **equations** which describes the traffic flow, **together with all the constraints** on the variables x_i , $i = 1, \dots, 6$. (Do not perform any operations on your equations: this is done for you in (b), and *do not simply copy out the equations implicit in (b)*. You will not get any marks if you do this.)

Intersection Flow in = Flow out

A

$$x_6 + 70 = x_1$$

B

$$x_1 = 10 + x_2$$

C

$$x_2 = 35 + x_3$$

D

$$x_3 = 75 + x_4$$

E

$$x_4 + 20 = x_5$$

F

$$x_5 + 30 = x_6$$

Constraints : $x_i \geq 0$, $i = 1, \dots, 6$ (one-way streets)
 $x_i \in \mathbb{Z}$, " ("# of cars")

11. b) The reduced row-echelon form of the augmented matrix of the system in part (a) is

$$\begin{array}{c} \Delta \\ \left[\begin{array}{cccccc|c} 1 & 0 & 0 & 0 & 0 & -1 & 70 \\ 0 & 1 & 0 & 0 & 0 & -1 & 60 \\ 0 & 0 & 1 & 0 & 0 & -1 & 25 \\ 0 & 0 & 0 & 1 & 0 & -1 & -50 \\ 0 & 0 & 0 & 0 & 1 & -1 & -30 \\ 0 & 0 & 0 & 0 & 0 & 0 & 0 \end{array} \right] \end{array}$$

Give the general solution. (Ignore the constraints from (a) at this point.)

$$x_1 = 70 + \Delta$$

$$x_2 = 60 + \Delta$$

$$x_3 = 25 + \Delta$$

$$x_4 = -50 + \Delta$$

$$x_5 = -30 + \Delta$$

$$x_6 = \Delta$$

$$; \Delta \in \mathbb{R}$$

11. c) Find the minimum flow along BC, using your results from (b).
(You must justify all your answers.)

Flow along BC is x_2 .

$$\left. \begin{array}{ll} x_1 \geq 0 & \Leftrightarrow \Delta \geq -70 \\ x_2 \geq 0 & \Leftrightarrow \Delta \geq -60 \\ x_3 \geq 0 & \Leftrightarrow \Delta \geq -25 \\ x_4 \geq 0 & \Leftrightarrow \Delta \geq 50 \\ x_5 \geq 0 & \Leftrightarrow \Delta \geq 30 \\ x_6 \geq 0 & \Leftrightarrow \Delta \geq 0 \end{array} \right\} \Rightarrow \Delta \geq 50$$

$$\therefore x_2 = 60 + \Delta \geq 110.$$

12. Let $W = \{(x, y, z, u) \in \mathbb{R}^4 \mid x + y - u = 0\}$.

a) Without referring to the Subspace Test briefly explain why W is a subspace of $\mathbb{R}^4$. (Remember, I am not a high dimensional being, so geometric arguments in $\mathbb{R}^4$ won't convince me.)

b) Find a basis for W .

c) Use the Gram-Schmidt algorithm to find an orthogonal basis for W .

d) Find the best approximation by a vector in W to the vector $(1, 1, 1, 0)$.

(Remember: you must justify your answers.)

$$a) W = \ker \begin{bmatrix} 1 & 1 & 0 & -1 \end{bmatrix} \begin{matrix} r & s & t \\ \end{matrix} \therefore W \text{ is a subspace of } \mathbb{R}^4$$

$$b) \text{ From (a), we see that } W = \{(-r+t, r, s, t) \mid r, s, t \in \mathbb{R}\}$$

$$\therefore \left\{ \underset{v_1}{(-1, 1, 0, 0)}, \underset{v_2}{(0, 0, 1, 0)}, \underset{v_3}{(1, 0, 0, 1)} \right\} \text{ is a basis for } W$$

$$c) \text{ G-S: } w_1 = v_1 = (-1, 1, 0, 0).$$

$$w_2 = v_2 - \frac{v_2 \cdot w_1}{\|w_1\|^2} \cdot w_1 = v_2 = (0, 0, 1, 0)$$

$$w_3 = v_3 - \frac{v_3 \cdot w_1}{\|w_1\|^2} w_1 - \frac{v_3 \cdot w_2}{\|w_2\|^2} w_2$$

$$= (1, 0, 0, 1) - \frac{(-1)}{2} w_1 - 0 w_2$$

$$= (1, 0, 0, 1) + \frac{1}{2} (-1, 1, 0, 0)$$

$$= \left(\frac{1}{2}, \frac{1}{2}, 0, 1\right). \text{ Let's take } \tilde{w}_3 = (1, 1, 0, 2)$$

$$\therefore \{w_1, w_2, \tilde{w}_3\} \text{ is an orthog. basis for } W$$

$$d) \nexists \text{ proj}_W (1, 1, 1, 0) = \frac{(1, 1, 1, 0) \cdot (-1, 1, 0, 0)}{2} (-1, 1, 0, 0) + \frac{(1, 1, 1, 0) \cdot (0, 0, 1, 0)}{2} w_2$$

$$+ \frac{(1, 1, 1, 0) \cdot (1, 1, 0, 2)}{6} \tilde{w}_3$$

$$= \frac{1}{2} w_2 + \frac{1}{3} \tilde{w}_3 = \left(\frac{1}{3}, \frac{1}{3}, \frac{1}{2}, \frac{2}{3}\right)$$

13. Let $A = \begin{bmatrix} 1 & 0 & -2 \\ 1 & 3 & 1 \\ 1 & 0 & 4 \end{bmatrix}$.

- a) Compute the characteristic polynomial of A and factor it to show that the only eigenvalues of A are 2 and 3.
- b) Find a basis of $E_2 = \{v \in \mathbb{R}^3 \mid Av = 2v\}$.
- c) Find a basis of $E_3 = \{v \in \mathbb{R}^3 \mid Av = 3v\}$.
- d) If possible, find an invertible matrix P and a diagonal matrix D such that $P^{-1}AP = D$. If A is diagonalizable, explain why your choice of P is invertible. If A is not diagonalizable, explain why.

$$\begin{aligned} \text{a) } \det(A - \lambda I) &= \begin{vmatrix} 1-\lambda & 0 & -2 \\ 1 & 3-\lambda & 1 \\ 1 & 0 & 4-\lambda \end{vmatrix} \stackrel{\text{alt}}{=} (3-\lambda) \begin{vmatrix} 1-\lambda & -2 \\ 1 & 4-\lambda \end{vmatrix} \\ &= (3-\lambda) \{ \lambda^2 - 5\lambda + 4 + 2 \} \\ &= (3-\lambda) (\lambda - 3)(\lambda - 2) \end{aligned}$$

$\therefore$ eval are 2 and 3.

$$\text{b) } E_2 = \ker(A - 2I) = \ker \begin{bmatrix} -1 & 0 & -2 \\ 1 & 1 & 1 \\ 1 & 0 & 2 \end{bmatrix} = \ker \begin{bmatrix} 1 & 0 & 2 \\ 0 & 1 & -1 \\ 0 & 0 & 0 \end{bmatrix} = \{ (-2\lambda, \lambda, 0) \mid \lambda \in \mathbb{R} \}$$

$\therefore \{ (-2, 1, 0) \}$ is a basis for E_2 .

$$\text{c) } E_3 = \ker(A - 3I) = \ker \begin{bmatrix} -2 & 0 & -2 \\ 1 & 0 & 1 \\ 1 & 0 & 1 \end{bmatrix} = \ker \begin{bmatrix} 1 & 0 & 1 \\ 0 & 0 & 0 \\ 0 & 0 & 0 \end{bmatrix} = \{ (-t, \lambda, t) \mid \lambda, t \in \mathbb{R} \}$$

$\therefore \{ (-1, 0, 1), (0, 1, 0) \}$ is a basis for E_3 .

$$\text{d) } \text{Set } P = \begin{bmatrix} v_1 & v_2 & v_3 \end{bmatrix} = \begin{bmatrix} -2 & -1 & 0 \\ 1 & 0 & 1 \\ 1 & 1 & 0 \end{bmatrix} \text{ \& } D = \begin{bmatrix} 2 & 0 & 0 \\ 0 & 3 & 0 \\ 0 & 0 & 3 \end{bmatrix}.$$

(check col form)

$$\text{Then } \det P = \begin{vmatrix} -1 & 0 & 0 \\ 1 & 0 & 1 \\ 1 & 1 & 0 \end{vmatrix} = 1 \text{ so } P \text{ is invertible and } P^{-1}AP = D$$

(We also know P is invertible because $\dim E_2 + \dim E_3 = 3 = \dim \mathbb{R}^3$)

14. Define a linear transformation $S: \mathbb{R}^3 \rightarrow \mathbb{R}^3$ by

$$S\begin{pmatrix} x \\ y \\ z \end{pmatrix} = \begin{pmatrix} x+y \\ y+z \\ z-x \end{pmatrix}.$$

- Find the standard matrix of S .
- Find a basis for $\text{im } S$.
- Give a complete geometric description of $\text{im } S$.
- Find the dimension of $\text{ker } S$.

a) Let $A = [S(e_1) \ S(e_2) \ S(e_3)] = \begin{bmatrix} 1 & 1 & 0 \\ 0 & 1 & 1 \\ -1 & 0 & 1 \end{bmatrix}$ (block col. form) This is the standard matrix of S .

b) Since $\text{im } S = \text{col } A$, we find a basis for $\text{col } A$

$$A \sim \begin{bmatrix} 1 & 1 & 0 \\ 0 & 1 & 1 \\ 0 & 1 & 1 \end{bmatrix} \sim \begin{bmatrix} 1 & 0 & -1 \\ 0 & 1 & 1 \\ 0 & 0 & 0 \end{bmatrix}, \text{ so } \{(1, 0, -1), (1, 1, 0)\}$$

is a basis for $\text{im } S$.

c) From (b), we know S is the plane through 0 in $\mathbb{R}^3$ with normal $(1, 0, -1) \times (1, 1, 0) = \begin{vmatrix} \hat{i} & \hat{j} & \hat{k} \\ 1 & 0 & -1 \\ 1 & 1 & 0 \end{vmatrix} = (1, -1, 1).$

d) Since $\text{ker } A = \text{ker } S$, $\dim \text{ker } S = \dim \text{ker } A$

$$= 3 - \text{rank } A$$

$$= 3 - 2$$

$$= 1.$$

15 (a). State whether each of the following is (always) true, or is (possibly) false, in the box after the statement.

- If you say the statement may be false, you must give an explicit example - with numbers - to show this.
- If you say the statement is true, you must give a clear explanation - by quoting a theorem presented in class, or by giving a proof valid for every case.

(i) If A is a 2 by 2 matrix and A is diagonalizable, then A is invertible.

e.g. $A = \begin{bmatrix} 1 & 0 \\ 0 & 0 \end{bmatrix}$, being diagonal, is diagonalizable. False
 However, it is not invertible, as $\text{rank } A$ is clearly $1 < 2$.

(ii) Suppose B is an invertible 3×3 matrix, and that $\{v_1, v_2, v_3\}$ spans $\mathbb{R}^3$. Then $\{Bv_1, Bv_2, Bv_3\}$ also spans $\mathbb{R}^3$.

Since $\{v_1, v_2, v_3\}$ spans $\mathbb{R}^3$, if $A = [v_1 \ v_2 \ v_3]$,
 (block col. form) we know A is invertible.

TRUE.

Then BA is also invertible (as it's the product of 2 invertible matrices). But $BA = B[v_1 \ v_2 \ v_3] = [Bv_1 \ Bv_2 \ Bv_3]$,
 So $\{Bv_1, Bv_2, Bv_3\}$ spans $\mathbb{R}^3$ (By the "Invertible matrix theorem").

15 (b). Let A be a real $n \times n$ matrix. Give 3 statements (in total) equivalent to
"A is not invertible",
one each in terms of:

(I) the columns of A

- are linearly dependent
- do not span $\mathbb{R}^n$
- are not a basis of $\mathbb{R}^n$

(only one
is necessary)

(II) the determinant of A

is zero.

(III) the homogeneous linear system $Ax = 0$, where $x \in \mathbb{R}^n$ will have

infinitely many solutions

16. (4 bonus marks) Make sure you finish and check the rest of the paper before trying this. Bonus marks are much harder to earn.

Suppose $\{u, v, w\} \subset \mathbb{R}^3$ is a set of non-zero vectors.

Prove the following carefully. N.B. Your proof must be valid for every set $\{u, v, w\}$ of non-zero vectors in $\mathbb{R}^3$, so don't choose any of them yourself!

If $|u \cdot v \times w| = \|u\| \|v\| \|w\|$, then $\{u, v, w\}$ is an orthogonal set.

Let θ be the angle between u & $v \times w$ and φ be the angle between v and w .

$$\begin{aligned} \text{Then } |u \cdot v \times w| &= \|u\| \|v \times w\| |\cos \theta| \\ &= \|u\| \|v\| \|w\| \sin \varphi |\cos \theta| \\ &= \|u\| \|v\| \|w\|. \end{aligned}$$

Since $0 \leq |\cos \theta|$, $\sin \varphi \leq 1$, this implies $\sin \varphi = 1$ and $|\cos \theta| = 1$. Thus $\varphi = \pi/2$, so v and w are orthogonal.

Now use the fact that $|u \cdot v \times w| = |u \times v \cdot w| = |w \times u \cdot v|$ argue as above to conclude that u and v and u and w are also orthogonal.

Or: Since $|\cos \theta| = 1$, u is parallel to $v \times w$ and so is perpendicular to both! !
