

CST8277 Hybrid Activities

Hybrid 1: Multi-threading with Java

This week's online activity is to get us started with Multi-threading with Java. Multi-threading enables us to write programs that do more than one thing at a time. This is especially important in Enterprise Programming because those programs have many simultaneous users and therefore must do many things simultaneously.

1. To begin, watch the [video](http://www.lynda.com/Java-tutorials/Extending-Thread-class/107061/113507-4.html) on Lynda.com, in the Java Advanced Training course, Chapter 9, Working with Multi-Threading, 0:21:04s
URL: <http://www.lynda.com/Java-tutorials/Extending-Thread-class/107061/113507-4.html>
2. Read the description of the **Thread** class in the Java 8 API documentation
3. Read the description of the **Runnable** interface in the Java 8 API documentation
4. Check your understanding of these new concepts with the online Blackboard Quiz for this activity
