

CST8277 Hybrid Activities

Hybrid 2: Java Networking: Sockets

This week's online activity is about Socket Communications in Java programming.

1. Read the **All About Sockets** lesson in the **Custom Networking** Trail of the Java Tutorials. The **All About Sockets** Lesson is here
<http://docs.oracle.com/javase/tutorial/networking/sockets/index.html>
(Note: the whole **Custom Networking** Trail is here
<http://docs.oracle.com/javase/tutorial/networking/TOC.html> , but this activity is just the **All About Sockets** Lesson)
For best results, read, compile and run the EchoServer and the EchoClient whose source code can be downloaded from the page titled "Reading from and Writing to a Socket" by clicking on the links with those names.
2. Check your understanding of these new concepts with the online Blackboard Quiz for this activity
