

Review Test Submission: Midterm

User	Amanpreet Singh
Course	18W_CST8288_020 OOP with Design Patterns
Test	Midterm
Started	3/14/18 4:00 PM
Submitted	3/14/18 5:49 PM
Due Date	3/14/18 5:51 PM
Status	Completed
Attempt Score	54 out of 90 points
Time Elapsed	1 hour, 48 minutes out of 1 hour and 50 minutes
Instructions	you must do the test in class. you will receive a zero otherwise.

you have 30 questions which it should not take you more than 2 min per question on average to finish. 60 min total.

you have 1 programming question with 50 min time. it should only take your about 30 min to finish it. 10 bonus mark if you finish controller and view as well.

questions will get easier the further down the list you go. manage your time carefully.

there are very easy, easy, normal and hard question (10 each plus 1 hard). in order each question in a specific category is worth 1, 2, 4 and 20. for total of 90.

3 out of 20 points

[Class Diagram - Midterm.pdf](#)

[Sequence Diagram - Midterm - Student.pdf](#)

open the two files above and write the program for Student class.

you are to create this model with one thread using ExecutorService.

this thread is called every time updateName is called.

in updateName you are to check if fName and lName are not null or empty. if they are throw an exception. then you are to submit a lambda to ExecutorService which will call setChanged and notifyObservers. notifyObservers will send a list of String with fName, lName and ID in it. ID is an int must be converted to string first. you can use Arrays.asList(T...t). create getters for everything.

in constructor you must update names, assign ID and create ExecutorService.

read the sequence diagram carefully all you need is in there.

when done, upload Student-[student number].java

Selected Answer: [Student 040883167.zip](#)

• Question 2

1 out of 5 points (Extra Credit)

[Sequence Diagram - Midterm - View.pdf](#)

BONUS: write the code for view.

view runs on one thread using ExecutorService.

submit a lambda to ExecutorService in start method which will updateName through controller for 10 times. simply using i index as new fName and lName.

everytime the update is called. cast the object to list of string and print the data on console.

Selected Answer: [None Given]

• **Question 3**

0 out of 5 points (Extra Credit)

[Sequence Diagram - Midterm - Controller.pdf](#)

BONUS: write the code for controller.

main creates all classes and establishes connections between them,

methods in controller call method of student, except for set student.

Selected Answer: [None Given]

• **Question 4**

4 out of 4 points

what is true about Observer design Pattern?

Selected Answer: c.

a broadcast system allowing distribution of information to all interested parties.

Answers:

a. observer notifies observables when changes occur.

b. that shifty programmer you saw once made it to observe everyone.

c.

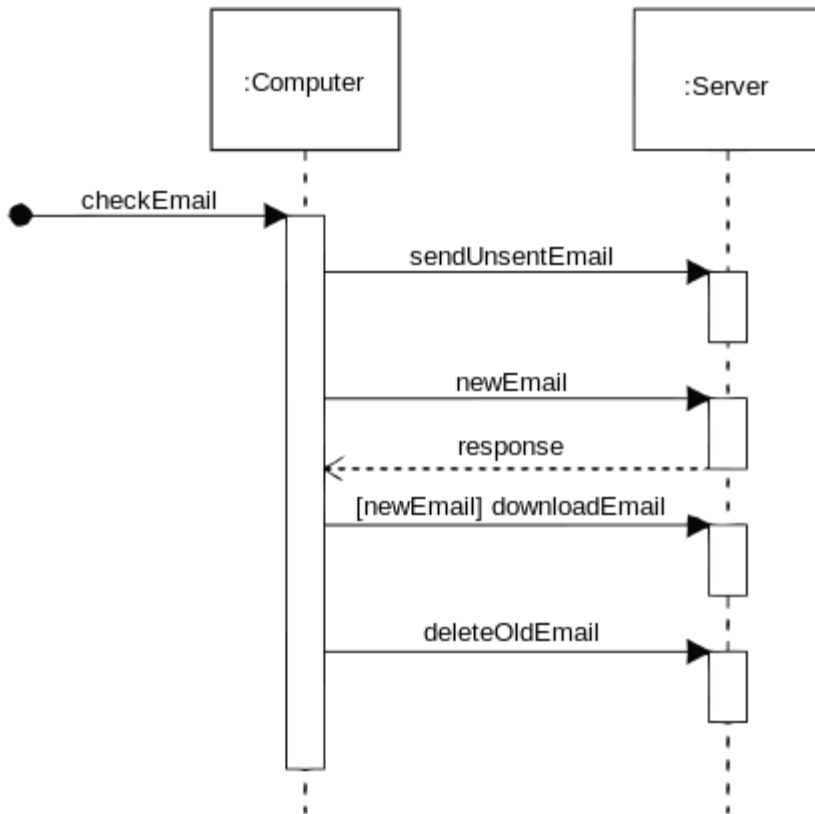

a broadcast system allowing distribution of information to all interested parties.

d. it must always be used with MVC, it does not work otherwise

• **Question 5**

4 out of 4 points

What is this UML Diagram?

Selected Answer: a.
Sequence Diagram

- Answers:
- a. Sequence Diagram
 - b. Class Diagram
 - c. Use Case
 - d. State Diagram

• **Question 6**

4 out of 4 points

Match definition of each thread condition to its name

Question	Correct Match	Selected Match
Deadlock	<input checked="" type="checkbox"/> A. two threads gain sync lock while waiting for other one to release the lock. One way to	<input checked="" type="checkbox"/> A. two threads gain sync lock while waiting for other one to release the lock. One way to

prevent is from all threads to take their locks in the same order.

prevent is from all threads to take their locks in the same order.

Race condition

✔ B.
multiple threads try and access the same code and create a buggy outcome

✔ B.
multiple threads try and access the same code and create a buggy outcome

Starvation

✔ C.
when one or more thread must wait for access because other threads have higher priority

✔ C.
when one or more thread must wait for access because other threads have higher priority

All Answer Choices

A.
two threads gain sync lock while waiting for other one to release the lock. One way to prevent is from all threads to take their locks in the same order.

B.
multiple threads try and access the same code and create a buggy outcome

C.
when one or more thread must wait for access because other threads have higher priority

D.
i did not listen in class or labs, so i am just going to play a game of chance here

• **Question 7**

4 out of 4 points

Given the code below (making no other changes), which access modifiers (public, protected, or private) can legally be placed before print() in ?

Selected Answer:  c.
public

- Answers:
- a. protected
 -  b. private
 - c. public
 - d. friend

• **Question 8**

0 out of 4 points

The code below adds what color your Scene object?

Selected Answer:  c.
Red (FF0000)

- Answers:
-  a. Blue (0000FF)

- b.
White (FFFFFF)
- c.
Red (FF0000)
- d.
Green (00FF00)

• **Question 9**

0 out of 4 points

which statement is not true?

Selected Answer:  d.

this singleton has lazy initialization. object is created when calling instance()

Answers:

 a.

this singleton has eager initialization. object is created at class loading time.

b.
singleton object can never have an instance, it is by design only static

c.
there was not enough hints in this question, i will complain about it after midterm.

d.
this singleton has lazy initialization. object is created when calling instance()

• **Question 10**

4 out of 4 points

match Java properties to correct UML Class Diagram notation.

Question	Correct Match	Selected Match
public	✔ G. +	✔ G. +
private	✔ C. -	✔ C. -
protected	✔ F. #	✔ F. #
package	✔ D. ~	✔ D. ~
constant (final)	✔ A. CAPITALIZE	✔ A. CAPITALIZE
abstract	✔ E. <i>italic</i>	✔ E. <i>italic</i>
static	✔ H. <u>underline</u>	✔ H. <u>underline</u>

All Answer Choices

A.
CAPITALIZE

B.
bold

C.
-

D.
~

E.
italic

F.
#

G.
+

H.
underline

• **Question 11**

4 out of 4 points

Match JavaFX layout to its description?

Question	Correct Match	Selected Match
BorderLayout	✔ A.	✔ A.

	This layout pane provides five regions in which to place nodes: top, bottom, left, right, and center	This layout pane provides five regions in which to place nodes: top, bottom, left, right, and center
HBox	 B. This layout pane provides an easy way for arranging a series of nodes in a single row	 B. This layout pane provides an easy way for arranging a series of nodes in a single row
VBox	 C. This layout pane is similar to the another layout pane, except that the nodes are arranged in a single column	 C. This layout pane is similar to the another layout pane, except that the nodes are arranged in a single column
GridPane	 D. This layout pane enables you to create a flexible grid of rows and columns in which to lay out nodes	 D. This layout pane enables you to create a flexible grid of rows and columns in which to lay out nodes
FlowLayout	 E. The nodes within a this layout pane are laid out consecutively and wrap at the boundary set for the pane. Nodes can <u>flow</u> vertically (in columns) or horizontally (in rows)	 E. The nodes within a this layout pane are laid out consecutively and wrap at the boundary set for the pane. Nodes can <u>flow</u> vertically (in columns) or horizontally (in rows)

All Answer Choices

- A.
This layout pane provides five regions in which to place nodes: top, bottom, left, right, and center
- B.
This layout pane provides an easy way for arranging a series of nodes in a single row
- C.
This layout pane is similar to the another layout pane, except that the nodes are arranged in a single column
- D.
This layout pane enables you to create a flexible grid of rows and columns in which to lay out nodes
- E.
The nodes within a this layout pane are laid out consecutively and wrap at the boundary set for the pane. Nodes can flow vertically (in columns) or horizontally (in rows)

• **Question 12**

4 out of 4 points

Match each sorting algorithm to its correct image.

Question
Correct Match

Selected Match

Bu
bbl
e

✔ A.
compare pairs of cells at a time, swap if
needed. right side is sorted.

✔ A.
compare pairs of cells at a time, swap if
needed. right side is sorted.

Ins
erti
on

✔ B.
move elements to the left side one at a time till
sorted, left side is sorted.

✔ B.
move elements to the left side one at a time till
sorted, left side is sorted.

Select  C.
find the smallest element and move it to the
correct spot, repeat till done.

 C.
find the smallest element and move it to the
correct spot, repeat till done.

Quick  D.
choose a pivot element, move elements so all element's on the left of it are smaller and the right of it are bigger. then recursively do the same to each side of the pivot.

 D.
choose a pivot element, move elements so all element's on the left of it are smaller and the right of it are bigger. then recursively do the same to each side of the pivot.

Me  E.
rge divide the array in half and recursively half each
half in again. after reaching the smallest size sort
and merge again.

 E.
divide the array in half and recursively half each
half in again. after reaching the smallest size sort
and merge again.

All Answer Choices

A.
compare pairs of cells at a time, swap if needed. right side is sorted.

B.
move elements to the left side one at a time till sorted, left side is sorted.

C.
find the smallest element and move it to the correct spot, repeat till done.

D.
choose a pivot element, move elements so all element's on the left of it are smaller and the right of it are bigger. then recursively do the same to each side of the pivot.

E.
divide the array in half and recursively half each half in again. after reaching the smallest size sort and merge again.

• **Question 13**

2 out of 4 points

select **all** the correct statements regarding Runnable and Callable interfaces:

c.

Callable can only work with ExecutorService.

d.

Callable<T> has one method called call which takes no arguments and returns a generic type T

Answers: a.

Runnable has one method called run which takes and returns nothing.

b.

Runnable can be used with Thread and ExecutorService.

c.

Callable can only work with ExecutorService.

d.

Callable<T> has one method called call which takes no arguments and returns a generic type T

• **Question 14**

0 out of 2 points

A protected method may be overridden by a public method.

Selected Answer: False

Answers: True
 False

- **Question 15**

2 out of 2 points

An overridden method can be in the same class as the original method.

Selected Answer: False

Answers: True
 False

- **Question 16**

0 out of 2 points

In the code fragment below, after execution of first line, sbuf references an instance of the StringBuilder class. After execution of next line, sbuf still references the same instance. correct?

Selected Answer: False

Answers: True
 False

- **Question 17**

0 out of 2 points

Consider the following classes, declared in separate source files, What output results when the main method of the class Sub is run?

Selected Answer:  b.

Base is 6

Base is 6

Answers:  a.

Sub is 5

Base is 6

b.

Base is 6

Base is 6

c.

Sub is 6

Base is 5

d.

Sub is 5 Base is 6

• **Question 18**

2 out of 2 points

What is the nature of data typing in the Java programming language?

Selected Answer: b.

Strongly typed

Answers:

a.

Typed like C++

b.

Strongly typed

c.

Weakly typed

d.

Untyped

e.

Typed Like JavaScript

• **Question 19**

2 out of 2 points

When using JUnit 4 what annotation is used to mark a test method?

Selected Answer: a.

@Test

Answers:

a.

@Test

b.

i don't do old code, i only program in JUnit 5

c.

@CheckCode

d.

@Testing

• **Question 20**

0 out of 2 points

Which of the following JavaFX components is typically only used to display text to a user?

Selected Answer:  c.
TextField

Answers:  a.
Label
b.
Button
c.
TextField

• **Question 21**

2 out of 2 points

When a class (not abstract) implements an interface, it must provide behavior for...

Selected Answer:  c.
All methods defined in that interface.

Answers: a.
Only certain methods in an interface.
b.
Two methods defined in that interface.
 c.
All methods defined in that interface.
d.
Any methods in a class.

• **Question 22**

2 out of 2 points

will the JavaFX display properly?

Selected Answer: d.
No, primaryStage.show() is missing

Answers:

- a.
Yes, JavaFX will display
- b.
No, setScene must be the last line called
- c.
No, Scene is not added to the root
- d.
No, primaryStage.show() is missing

• **Question 23**

2 out of 2 points

A protected method may be overridden by a private method.

Selected Answer: False

Answers: True
 False

• **Question 24**

1 out of 1 points

Objects communicate by sending messages between each other, this is implemented using _____.

Selected Answer: b.
Methods

Answers: a.

Variables

b.

Methods

c.

Post Office

d.

Reflection

• **Question 25**

1 out of 1 points

Java applications are platform independent because?

Selected Answer: b.

Java Byte Code (compiled Java) runs on JVM

Answers:

a.

The CPU's have a built-in JVM.

b.

Java Byte Code (compiled Java) runs on JVM

c.

Java don't need a JVM.

d.

The server has a built-in JVM.

• **Question 26**

1 out of 1 points

Given the following declaration, what is Runnable?

Selected Answer:

an interface.

Answers:

a package.

an object.

an interface.

a class.

• **Question 27**

1 out of 1 points

What results from running the following code?

Selected Answer: c.
value is Hello 1

Answers:

- a.
value is Hello
- b.
nothing prints
- c.
value is Hello 1
- d.
value is Hello 12

• **Question 28**

1 out of 1 points

Which of the following is not one of Java's access modifiers?

Selected Answer: d.
internal

Answers:

- a.
protected
- b.
static
- c.
public
- d.
internal

• **Question 29**

0 out of 1 points

Which of the following signatures are valid for the main() method entry point of an application?

Selected Answer:  a.

private static void main(String [] arg)

Answers:

a.
private static void main(String [] arg)

b.
i dont know ask eclipse, it does it for me all the time

 c.
public static void main(String gotStuff [])

d.
public void static main()

e.
static void main (String [])

• **Question 30**

1 out of 1 points

What is wrong with the Java class declaration below, with regard to coding conventions?

```
public class tuna_fish{
```

Selected Answer:  c.

Both of other options

Answers:

a.
Class identifiers in Java should start with an upper case letter.

b.
Class identifiers in Java should use mixed case instead of underscores.

 c.
Both of other options

• **Question 31**

1 out of 1 points

In an Object Oriented programming language data and related functions are combined into a single unit called a(n) _____.

Selected Answer:  b.

Object

Answers:

a.
Token

 b.
Object

c.
Procedure

d.
i did not attend the lecturers 😊

• **Question 32**

1 out of 1 points

What is the purpose of the main method?

Selected Answer: c.
To act as the entry point for the program.

- Answers:
- a.
To hold the APIs of the application.
 - b.
To create buttons and scrollbars.
 - c.
To act as the entry point for the program.
 - d.
To build a user interface.

• **Question 33**

0 out of 1 points

What one statement is true about the code fragment below?

Selected Answer: b.
first line throws exception, because the String constructor must be called explicitly

- Answers:
- a.
first if condition throws exception, because str and strb have different types
 - b.
first line throws exception, because the String constructor must be called explicitly
 - c.
program print String
 - d.
program prints nothing
 - e.
program print StringBuilder

Tuesday, September 11, 2018 3:44:10 PM EDT

Question 1

1. What pattern does the Java event model resemble.

- Model-View-Controller
- Simple Factory
- Observer
- None of the above

1 points

Question 2

1. Which of the following statements about adapters is false.

- An adapter class implements an interface.
- An adapter class provides a default (empty) implementation of every method in the interface.
- Programmers override selected adapter methods.
- A ComponentListener is a ComponentAdaptor.

1 points

Question 3

1. Consider the following application:

```
1. class Q6 {
2.     public static void main(String args[]) {
3.         Holder h = new Holder();
4.         h.held = 100;
5.         h.bump(h);
6.         System.out.println(h.held);
7.     }
8. }
9.
10. class Holder {
11.     public int held;
12.     public void bump(Holder theHolder) { theHolder.held++; }
```

13. }

What value is printed out at line 6?

- 0
- 1
- 101
- 100

1 points

Question 4

1. Which of the following does not generate GUI events.

- Typing in a text field.
- Selecting an item from a menu.
- Viewing the text in a label.
- Moving the mouse.

1 points

Question 5

1. Assume that the class `AcLis` implements the `ActionListener` interface. The code fragment below constructs a button and gives it four action listeners. When the button is pressed, which action listener is the first to get its `actionPerformed()` method invoked?

1. `Button btn = new Button("Hello");`
2. `AcLis a1 = new AcLis();`
3. `AcLis a2 = new AcLis();`
4. `AcLis a3 = new AcLis();`
5. `AcLis a4 = new AcLis();`
6. `btn.addActionListener(a1);`
7. `btn.addActionListener(a2);`
8. `btn.addActionListener(a3);`
9. `btn.addActionListener(a4);`
10. `btn.removeActionListener(a2);`

11. btn.removeActionListener(a3);
12. btn.addActionListener(a3);
13. btn.addActionListener(a2);

- a1 gets its actionPerformed() method invoked first.
- a2 gets its actionPerformed() method invoked first.
- a3 gets its actionPerformed() method invoked first.
- a4 gets its actionPerformed() method invoked first.
- It is impossible to know which listener will be first.

1 points

Question 6

1. You cannot access a database using a servlet.

- True
- False

1 points

Question 7

1. A typical servlet would output _____.

- XML.
- XSL.
- HTML.
- none of these.

1 points

Question 8

1. When you want to listen for an event, you can implement an appropriate _____ for your class.

- handler.

- listener.
- abstract class.
- superclass.

1 points

Question 9

1. The catch block that begins catch (Exception ex) can catch Exceptions of type.

- IOException
- ArithmeticException
- both of these
- neither of these

1 points

Question 10

1. Which of the following statements about JPanels is false.

- A JPanel is a JComponent.
- A JPanel is a Container.
- A JPanel does not have a content pane.
- A JPanel has a fixed size.

1 points

Question 11

1. We can derive many of the operations of each class by examining the key _____ and _____ in the requirements documents.

- verbs, verb phrases.

- nouns, noun phrases.
- objectives, objective phrases.
- Both a and b.

1 points

Question 12

1. Java data types are the same as the data types used in the database.

- True
- False

1 points

Question 13

1. Using the protected keyword gives a member.

- public access.
- package access.
- private access.
- block scope.

1 points

Question 14

1. SQL statements that are stored in a database can be invoked using an object that implements interface _____.

- Callable.
- StoredStatement.
- CallableStatement.
- Connection.

1 points

Question 15

1. Which JFrame constant indicates that the program should terminate when the window is closed by the user.

- TERMINATE_ON_CLOSE.
- IMMEDIATELY_CLOSE.
- EXIT_ON_CLOSE.
- All of the above.

1 points

Question 16

1. You have been given a design document for a veterinary registration system for implementation in Java technology. It states: "A pet has an owner, a registration date, and a vaccination-due date. A cat is a pet that has a flag indicating if it has been neutered, and a textual description of its markings." Given that the Pet class has already been defined, which of the following fields would be appropriate for inclusion in the Cat class as members.

- Pet thePet;
- Date registered;
- Date vaccinationDue;
- Cat theCat;
- boolean neutered;

1 points

Question 17

1. Which of the following statements about anonymous inner classes is false?

- They are declared without a name.
- They typically appear inside a method declaration.
- They are declared with the anonymous keyword.
- They can access their top-level class's members.

1 points

Question 18

1. Declaring a method final means.

- it will prepare the object for garbage collection.
- it cannot be accessed from outside its class.
- it cannot be overloaded.
- it cannot be overridden.

1 points

Question 19

1. Which statement is false.

- A generic class can be derived from a non-generic class.
- A non-generic class cannot be derived from a generic class.
- A generic class can be derived from another generic class.
- A generic method in a subclass can override a generic method in a superclass if both methods have the same signatures.

1 points

Question 20

1. In java, String concatenation is done using

- _____.
- String1.concat(String2).
 - String1 + (String2) .

- String1 & (String2) .
- Either a or b will perform String concatenation.
- Any of the above will perform String concatenation.

1 points

Question 21

1. In the UML, public visibility is indicated by placing a _____ before an operation or an attribute, whereas a _____ indicates private visibility.

- letter p, letter n.
- letter n, letter p.
- plus sign (+), minus sign (-).
- minus sign (-), plus sign (+).

1 points

Question 22

1. String literals in java, such as, "John Q. Doe".

- Are also known as anonymous String objects.
- Are not stored, but replaced at compile time.
- Are not String objects. They are only data.
- None of the above are true.

1 points

Question 23

1. The BorderLayout manager will divide the screen into a maximum of _____.

- 2 components
- 4 components

- 6 components
- none of the above

1 points

Question 24

1. All of the following methods are implicitly final except.

- a method in an abstract class.
- a private method.
- a method declared in a final class.
- static method.

1 points

Question 25

1. How many bytes does the following code write to file destfile?

```
1. try {
2.   FileOutputStream fos = new
   FileOutputStream("destfile");
3.   DataOutputStream dos = new
   DataOutputStream(fos);
4.   dos.writeInt(3);
5.   dos.writeDouble(0.0001);
6.   dos.close();
7.   fos.close();
8. }
9. catch (IOException e) { }
```

- 2
- 8
- 12
- 16

1 points

Question 26

1. You can get a list of the methods through which an Exception has traveled by using the method.

- getHistory().
- callStack().
- getPath().
- printStackTrace().

1 points

Question 27

1. Which statement is false?

- A generic method may be overloaded.
- A class can provide two or more generic methods that specify the same method name but different method parameters.
- A generic method cannot be overloaded by nongeneric methods.
- When the compiler encounters a method call, it searches for the method declaration that most precisely matches the method name and the argument types specified in the call.

1 points

Question 28

1. The Data Access Object pattern (DAO)

- _____.
- helps with the design of GUI programs.
 - abstracts the database access logic out of a domain class.
 - is a Gang of Four pattern.
 - is a simple way of creating a data access component.

1 points

Question 29

1. A JSlider does not use a model.

- True
- False

1 points

Question 30

1. When a superclass variable refers to a subclass object and a method is called on that object, the proper implementation is determined at execution time. What is the process of determining the correct method to call?

- early binding.
- non-binding.
- on-time binding.
- late binding.

1 points

Question 31

1. The UML represents operations by listing the operation name, followed by a _____-separated list of parameters in parentheses, a _____ and the return type.

- colon, semicolon.
- colon, colon.
- comma, colon.
- comma, semicolon.

1 points

Question 32

1. Consider the classes below, declared in the same file:

```
class A {  
    int a;  
    public A() {  
        a = 7;  
    }  
}
```

```

    }
}

class B extends A {
    int b;
    public B() {
        b = 8;
    }
}

```

- Both variables a and b are instance variables.
- After the constructor for class B executes, the variable a will have the value 7.
- After the constructor for class B executes, the variable b will have the value 8.
- A reference of type A can be treated as a reference of type B.

1 points

Question 33

1. The two key tasks required to process an event are.

- Add ActionListener and ActionEvent to the program.
- Register an event listener and implement an event handler.
- Create an inheritance hierarchy and implement polymorphism.
- Create two different ButtonHandler classes.
- None of the above.

1 points

Question 34

1. You can simulate atomicity by ensuring that _____.

- at least one thread carries out its operations on an object at a time.
- two threads carry out their operations on an object in parallel.

- only one thread carries out its operations on an object at a time.
- None of the above.

1 points

Question 35

1. Overriding a method differs from overloading a method because.

- Overloaded methods have the same signature.
- Overridden methods have the same signature.
- Both of the above.
- Neither of the above.

1 points

Question 36

1. Assigning a subclass reference to a superclass variable is safe.

- because the subclass object has an object of its superclass.
- because the subclass object is an object of its superclass.
- only when the superclass is abstract.
- only when the superclass is concrete.

1 points

Question 37

1. An advantage of inheritance is that:

- All methods can be inherited.
- All instance variables can be uniformly accessed by subclasses and superclasses.
- Objects of a subclass can be treated like objects of their superclass.

- None of the above.

1 points

Question 38

1. Which of the following statements about interfaces is false.

- An interface describes a set of methods that can be called on an object, providing a default implementation for the methods.
- An interface describes a set of methods that can be called on an object, not providing concrete implementation for the methods.
- Interfaces are useful when attempting to assign common functionality to possibly unrelated classes.
- Once a class implements an interface, all objects of that class have an is-a relationship with the interface type.

1 points

Question 39

1. Which statement is false.

- A ListIterator accesses the elements of a List.
- Class ArrayList is a fixed-size array.
- A LinkedList is a linked list implementation of a List.
- ArrayLists execute faster than Vectors because they are not thread safe.

1 points

Question 40

1. The classes and interfaces which comprise the collections framework are members of package _____.

- java.util.
- javax.swing.
- java.collections.
- java.collection.

1 points

Question 41

1. Java applications and Java applets are similar because both _____.

- are compiled using the javac command
- are executed using the java command
- are executed from within an HTML document
- have a main() method

1 points

Question 42

1. Which of the following statements for a JTextField is false.

- Can be used to display uneditable text.
- Can be used to display editable text.
- Enables users to enter data from the keyboard.
- Displays a list of fields.

1 points

Question 43

1. In a PreparedStatement, parameters are counted from position _____.

- 0.
- 1.
- 2.
- 3.

1 points

Question 44

1. From which object do you ask for MetaData describing columns after you execute a prepared statement.

- Connection.
- ResultSet.
- DriverManager.
- Driver.

1 points

Question 45

1. Consider the `abstract` superclass below:

```
public abstract class Foo { private int
a; public int b; public Foo( int aVal, int
bVal ) { a = aVal; b = bVal; } // end
Foo constructor public abstract int
calculate(); } // end class Foo
```

Any *concrete* subclass that *extends* class `Foo`:

- Must implement a method called `calculate`.
- Will not be able to access the instance variable `a`.
- Both (a) and (b).
- Neither (a) nor (b).

1 points

Question 46

1. `PreparedStatement` method _____ returns a `ResultSet`.

- `executeUpdate`.
- `executeQuery`.
- `execute`.
- None of the above.

1 points

Question 47

1. Which one statement below most accurately describes the following code listing?

```
1. class CustomException extends EOFException { }
2.
3. class Parent {
4.     void doSomething() throws CustomException {
5.         throw new CustomException ();
6.     }
7. }
8.
9. class Kid extends Parent {
10.    void doSomething() throws EOFException {
11.        throw new EOFException ();
12.    }
13. }
```

- Compiler error at line 4.
- Compiler error at line 5.
- Compiler error at line 10.
- Compiles without error.

1 points

Question 48

1. Accessing a superclass method through a subclass reference is

- A syntax error.
- Straightforward
- Inheritance.
- Polymorphism.

1 points

Question 49

1. ActionEvent is an interface in java.awt.event

- True.
- False.

1 points

Question 50

1. In UML diagrams, abstract methods are _____.

- displayed in italics.
- displayed in bold.
- not shown, as they have yet to be implemented.
- displayed, but without the parentheses following the method name.

1 points

Question 51

1. Which of the following is the superclass constructor call syntax?

- keyword super, followed by a dot (.).
- keyword super, followed by a set of parentheses containing the superclass constructor arguments.
- keyword super, followed by a dot and the superclass constructor name.
- None of the above.

1 points

Question 52

1. Which of the following declarations are illegal.

- transient int i = 41;
- public final static native int w();
- final static double d;

1 points

Question 53

1. What is the base case for the recursive merge sort algorithm.

- Any array that is already sorted.
- A two-element array.
- A one-element array.
- A zero-element array.

1 points

Question 54

1. For which of the following would polymorphism not provide a clean solution.

- A billing program where there is a variety of client types that are billed with different fee structures.
- A maintenance log program where data for a variety of types of machines is collected and maintenance schedules are produced for each machine based on the data collected.
- A program to compute a 5% savings account interest for a variety of clients.
- An IRS program that maintains information on a variety of taxpayers and determines who to audit based on criteria for classes of taxpayers.

1 points

Question 55

1. Which statement is false.

- When declaring a generic method, the type parameter section is placed before the return type of the method.
- Each type parameter section contains only one type parameter.
- A type parameter is an identifier that specifies a generic type name.
- Type parameters can represent only reference types.

1 points

Question 56

1. Refactoring refers to _____.

- the separation of presentation logic from domain logic.
- a process of refining a design to make it more flexible, expandable, and reusable
- adding functionality to a design
- the use of the Java™ Reflection API

1 points

Question 57

1. A typical Servlet follows the _____, _____ model when communicating with a client.

- Request, Response.
- Model, View.
- HTML, HTTP.
- Request, dispatch.
- None of the above.

1 points

Question 58

1. The == operator with the String class returns a true value if _____.

- lengths are unequal or the characters do not match if lengths are equal
- lengths are equal and the characters match exactly
- lengths are equal and the characters match except for case
- lengths are equal and the characters do not match
- none of the above

1 points

Question 59

1. Java performs automatic _____ of objects that are no longer referenced in a program.

- memory distribution.
- garbage collection.
- storage compression.
- trash aggregation.

1 points

Question 60

1. A catch block is executed.

- after all of the statements in a try block have been executed
- if a method executed in the try block throws any exception
- if a method executed in the try block throws the exception that is specified (in brackets) after the catch keyword
- both a and c are true

1 points

Question 61

1. A(n) _____ allows a program to walk through the collection and remove elements from the collection.

- Set.
- Queue.
- Iterator.
- List.

1 points

Question 62

1. In lab 4 you implemented what design pattern with the queue implementation.

- Model-view-controller.
- Singleton.
- Builder.
- Adapter.

1 points

Question 63

1. Classes and methods are declared final for all but the following reasons.

- final methods allow inlining the code.
- final methods and classes prevent further inheritance.
- final methods are static.
- final methods can improve performance.

1 points

Question 64

1. The code below draws a line. What color is the line?

```
1. g.setColor(Color.red.green.yellow.red.black);  
2. g.drawLine(0, 0, 100, 100);
```

- Red
- Black
- Green
- Yellow

1 points

Question 65

1. Which statement best describes the relationship between superclass and subclass types.

- A subclass reference cannot be assigned to a superclass variable and a superclass reference cannot be assigned to a subclass variable.
- A subclass reference can be assigned to a superclass variable and a superclass reference can be assigned to a subclass variable.
- A superclass reference can be assigned to a subclass variable, but a subclass reference cannot be assigned to a superclass variable.
- A subclass reference can be assigned to a superclass variable, but a superclass reference cannot be assigned to a subclass variable.

1 points

Question 66

1. It is a UML convention to denote the name of an abstract class in _____.

- bold.
- italics.
- a diamond.
- there is no convention of the UML to denote abstract classes—they are listed just as any other class.

1 points

Question 67

1. Suppose Stack is a generic class that has one type parameter. The following assignment `Stack< Integer > integerStack = new Stack(10);` is _____.

- illegal.
- permitted and safe.
- permitted but unsafe, the compiler issues a warning message.
- permitted but unsafe, the runtime environment issues a warning message.

1 points

Question 68

1. Which method changes the text the label displays.

- changeText.
- setText.
- changeLabel.
- setLabel.

1 points

Question 69

1. Recursion can be less efficient than iteration because.

- it can cause an explosion of method calls.
- it is not as intuitive.
- recursive methods are harder to debug.
- recursive methods take longer to program.

1 points

Question 70

1. Servlet get input from a client (browser) using an HTML form. The servlet accesses the form fields using _____.

- the ServletResponse object method getParameter().
- the ServletRequest object method getParameter().
- the ServletRequest object method getFormField().
- None of the above.

1 points

Question 71

1. Which of the following statements about abstract superclasses is true.

- abstract superclasses may contain data.

- Abstract superclasses may not contain implementations of methods.
- abstract superclasses must declare all methods as abstract.
- abstract superclasses must declare all data members not given values as abstract.

1 points

Question 72

1. The UML specifies a relationship called a(n) to model inheritance.

- inheritization.
- specialization.
- generalization.
- All of the above.

1 points

Question 73

1. One generic Stack class could be the basis for creating many Stack classes, e.g., Stack, Stack and Stack. These classes are known as _____.

- subclasses.
- generic subclasses.
- concrete classes.
- parameterized classes.

1 points

Question 74

1. An interface may contain.

- private static data and public abstract methods.
- only public abstract methods.

- public static final data and public abstract methods.
- private static data and public final methods.

1 points

Question 75

1. Using layout managers _____.

- provides the greatest level of control over a GUI's appearance.
- can be faster than creating a GUI with absolute positioning.
- allows the programmer to specify the exact location of each GUI component with respect to the upperleft corner of the Container.
- allows the programmer to specify the exact location of each GUI component with respect to the lowerleft corner of the Container.

1 points

Question 76

1. True or False: A protected method may not be overridden by a public method.

- True
- False

1 points

Question 77

1. Which of the following sorting algorithms is the fastest.

- Selection sort.
- Insertion sort.
- Merge sort.
- They all run at roughly the same speed.

1 points

Question 78

1. Which of the following is not possible.

- A class that implements two interfaces.
- A class that inherits from two classes.
- A class that inherits from one class, and implements an interface.
- All of the above are possible.

1 points

Question 79

1. Consider classes A, B and C, where A is an abstract superclass, B is a concrete class that inherits from A and C is a concrete class that inherits from B. Class A declares abstract method `originalMethod`, implemented in class B. Which of the following statements is true of class C.
 - Method `originalMethod` cannot be overridden in class C—once it has been implemented in concrete class B, it is implicitly final.
 - Method `originalMethod` must be overridden in class C, or a syntax error will occur.
 - If method `originalMethod` is not overridden in class C but is called by an object of class C, an error occurs.
 - None of the above.

1 points

Question 80

1. Which one of the following will not get the data from the first column of `ResultSet rs`, returned from executing the following SQL statement: `SELECT name, rank, serialNo FROM employee.`
 - `rs.getString(0);`
 - `rs.getString("name");`
 - `rs.getString(1);`
 - None of the above

1 points

Question 81

1. Consider the following class definition:

```
1. public class Test extends Base {  
2.     public Test(int j) {  
3.     }  
4.     public Test(int j, int k) {  
5.         super(j, k);  
6.     }  
7. }
```

Which of the following forms of constructor must exist explicitly in the definition of the Base class?

- Base() { }
- Base(int j) { }
- Base(int j, int k) { }
- Base(int j, int k, int l) { }
- None of the above

1 points

Question 82

1. Which of the following could be used to declare abstract method method1 in abstract class Class1 (method1 returns an int and takes no arguments).

- public int method1();.
- public int abstract method1();.
- public abstract int method1();.
- public int nonfinal method1();.

1 points

Question 83

1. The code within a finally block executes when a try block.

- identifies one or more Exceptions
- does not identify any Exceptions
- either a or b
- neither a nor b

1 points

Question 84

1. Which one of the following is not a region constant for the BorderLayout manager.

- CENTER.
- EAST.
- RIGHT.
- NORTH.

1 points

Question 85

1. From which object do you ask for DatabaseMetaData.

- Connection.
- ResultSet.
- DriverManager.
- Driver.

1 points

Question 86

1. The default implementation of method clone of Object performs a _____.

- empty copy.
- deep copy.
- full copy.
- shallow copy.

1 points

Question 87

1. Java programs communicate with databases using what API.

- DBMS.
- JDBC.
- RDBMS.
- Database.

1 points

Question 88

1. Write the code to implement a thread safe Singleton design pattern. Then name of you class should be SafeSingleton.

Press Tab to enter the content editor. For the toolbar, press ALT+F10 (PC) or ALT+FN+F10 (Mac).

Path: p

Words:21

10 points

Question 89

1. To place an element on a queue you call the _____ method of the Queue ADT.

- dequeue().

- push().
- setElement().
- None of the above.

1 points

Question 90

1. The equals() method in the String class returns a true value if _____.

- lengths are unequal or the characters do not match if lengths are equal
- lengths are equal and the characters match exactly
- lengths are equal and the characters match except for case
- lengths are equal and the characters do not match
- none of the above

1 points

Question 91

1. What is the minimal modification that will make the code below compile correctly?

1. final class Aaa
2. {
3. int xxx;
4. void yyy() { xxx = 1; }
5. }
- 6.
- 7.
8. class Bbb extends Aaa
9. {
10. final Aaa finalref = new Aaa();
- 11.
12. final void yyy()
13. {
14. System.out.println("In method yyy()");
15. finalref.xxx = 12345;

16. }

17. }

- On line 1, remove the final modifier
- On line 10, remove the final modifier
- Remove line 15
- On lines 1 and 10, remove the final modifier
- The code will compile as is. no modification is needed

1 points

Question 92

1. Servlets run under the control of a(n) .

- applet.
- owner class
- web browser
- web server or servlet engine

1 points

Question 93

1. Which of the following keywords allows a subclass to access a superclass method even when the subclass has overridden the superclass method?

- protected
- this
- public
- super

1 points

Question 94

1. In Lab 03, the implementation of Shannon's Theorem in a GUI program used the pattern.

- Value Object.
- Dependent Object.
- Model-View-Controller.
- Simple Factory.

1 points

Question 95

1. Design patterns _____.

- are proven ways for implementing behavior that help increase cohesion and reduce coupling.
- are elegant ways for writing code.
- cannot be implemented in Java.
- only apply to C++.

1 points

Question 96

1. What exception is thrown if the class loader cannot locate the driver class.

- NoSuchClassException.
- ClassCastException.
- ClassNotFoundException.
- IllegalClassException.

1 points

Question 97

1. When a subclass constructor calls its superclass constructor, what happens if the superclass's constructor does not assign a value to an instance variable.

- A syntax error occurs.
- A compile-time error occurs.
- A run-time error occurs.
- The program compiles and runs because the instance variables are initialized to their default values.

1 points

Question 98

1. Which of the following statements about recursion are true.

- Recursion can occur infinitely.
- Recursion uses a termination test.
- Both a and b.
- Neither a nor b.

1 points

Question 99

1. Use AWT components for a greater level of portability and flexibility.

- True
- False

1 points

Question 100

1. Which layout manager is the default for JFrame.

- FlowLayout.
- BorderLayout.
- GridLayout.

- None of the above.

1 points

Question 101

1. Generics provide _____ that allows programmers to catch invalid types at compile time.

- compile-time type safety.
- compile-time exception handling.
- compile-time error checking.
- run-time type safety.

1 points

Save and Submit

CST8288 (15F) Midterm Test: Student Name _____

Test Version A

Instructions (Read These):

- **Starting the test before permission has been given will result in an immediate zero.**
Everyone starts at the same time once everyone is seated.
- **Turn mobile phones / mobile devices off**
- **Remove all papers, books, laptops etc. from the desks**
- **Using any electronic device – laptop, mobile phone, PDA, calculator during the test will result in immediate zero**
- **Strictly no talking for any reason during the test or you get zero, unless to ask the professor a question**
If you complete your test early, do not talk to friends who are still taking the test.
- **Write your name at the top of the test document on page 1 and at the end for part 2, as well as on the Multiple Choice Answer Sheet.**
- **Assume code samples shown will run / compile as part of a larger code listing, unless there is an option provided “does not compile” or similar for a possible answer**
- **All questions are within the context of Java, and computer programming**
- **If you see what you think may be a mistake raise your hand and ask quietly when I reach you**
- **Please do not leave the room during the first 30 minutes of the test.**
- **All test materials must be returned at the end of the test**

Additional Notes:

(No Calculators allowed)

The test is in two parts:

Part 1 is multiple-choice questions

- Place your answers for Part 1 onto the provided answer sheet, only the answer sheet will be used for grading Part 1
- Note: Make sure your handwriting is readable; I suggest using upper case letters ensuring that D looks different from B.

Part 2 is short answer

- Place your answers for Part 2 into the spaces provided. If you need more room clearly note that your answer is continued on extra paper, and on the extra paper clearly indicate what question you are continuing.
- There is an extra blank page at the end of the test you can detach to use as scrap paper, remember to return all sheets at the end of the test, including scrap paper.

Ensure that your name is on all parts of the test:

- Multiple Choice answer sheet
- The test (this document)
- Any extra sheets you detach

Total Test Time will be 1 hour 50 minutes

Test A

Part 1: Multiple Choice Questions 60 points [2 points each]

1. Which of the following is a benefit of the OOP approach to programming?
 - a) Code maintainability
 - b) Code reusability
 - c) Code reliability
 - d) All of the above**
2. In an Object Oriented programming language data and related functions are combined into a single unit called a(n) _____.
 - a) Token
 - b) Object**
 - c) Procedure
3. Objects communicate by sending messages between each other, this is implemented using _____.
 - a) Variables
 - b) Methods**
 - c) Reflection
4. Which of the following is not one of Java's access modifiers?
 - a) public
 - b) protected
 - c) internal**
5. Which sentence describes Principle of Least Privilege best?
Each component should have:
 - a) full rights and privileges so it can do its task
 - b) minimal rights and privileges or full rights and privileges so it can do its task
 - c) minimal rights and privileges to accomplish its task, but no additional rights or privileges**
6. Which of the items below is often described as a blueprint?
 - a) Class**
 - b) Object
 - c) Enum

7. Given the classes below what prints from the program when it is run?

```
public class Counting{  
    public static int count;  
    public Counting(){ count++; }  
}
```

```
public class CountingDemo{  
    public static void main(String[] args){  
        System.out.print( (new Counting() ).count );  
        System.out.print( (new Counting() ).count );  
    }}
```

- a) 00
- b) 11
- c) 12**

8. Which of the following terms is used to categorize design patterns related to object instantiation?
- a) Behavioural
 - b) Structural
 - c) Creational**
9. Which design pattern from the list below is concerned with separating construction of a complex object from its implementation?
- a) Singleton
 - b) Builder**
 - c) Delegate
10. The code sample below is for a Singleton design pattern. What one thing is wrong?
- ```
public class SingleThing {
 private static final SingleThing thing = new SingleThing();
 public SingleThing(){} // private constructor
 public static SingleThing instance(){return thing;}
}
```
- a) The method named instance() should not be public
  - b) The constructor was marked public, it needs to be private**
  - c) You cannot assign a new SingleThing reference to variable thing because it was marked final
11. This code, taken from Assignment 2 suggests a(n) \_\_\_\_\_ design pattern
- ```
public void setBandwidth(double bandwidth){  
    model.setBandwidth(bandwidth);  
}
```
- a) Singleton
 - b) Delegate**
 - c) Builder
12. The code sample below is taken from delegate design pattern demonstration, item AccountBehaviour is a(n) _____.
- ```
public class Account {
 private double balance;
 private AccountBehaviour accountBehaviour;
```
- a) Superclass
  - b) Interface**
  - c) Enum
13. When using JUnit 4 what annotation is used to mark a test method?
- a) @Test**
  - b) @CheckCode
  - c) @Testing
14. Which one of the JUnit methods below is best used for comparing two double values?
- a) assertEquals(String message, double expected, double actual)
  - b) assertEquals(String message, double expected, double actual, double delta)**
  - c) assertTrue(String message, (expected == actual) )

15. Which of the following is not one of the typical workflow steps when creating a JUnit test?
- a) Check results for the one task tested using an appropriate assert method.
  - b) Prepare objects and variables (use meaningful variable names).
  - c) Perform many tasks to be tested all at once inside one test method.**
16. Which of the classes below represent an immutable (non-changeable) sequence of characters in a Java program?
- a) String**
  - b) StringBuilder
  - c) StringBuffer
17. Which one of the methods of class StringBuilder is used to concatenate text into the StringBuilder?
- a) builder.append("text");**
  - b) builder.toString("text");
  - c) builder.add("text");

18. What is wrong with the Java class declaration below, with regard to coding conventions?

```
public class tuna_fish{}
```

- a) Class identifiers in Java should start with an upper case letter.
- b) Class identifiers in Java should use mixed case instead of underscores.
- c) Both of the above**

19. Given the recursive example below what is printed to the console?

```
public class B{
 public static void main(String[] args){
 recurse(2);
 }
 public static void recurse(int n){
 if (n >= 0) {
 System.out.print(n + " ");
 recurse(n - 1);
 System.out.print(n + " ");
 }
 }
}
```

- a) 3 2 1 1 2 3
- b) 2 1 0 0 1 2**
- c) 0 1 2 2 0 1

20. Which of the following lines below list Big-O in order from best to worse?

- a) O(1), O(log n), O(n), O(n log n), O(n<sup>2</sup>)**
- b) O(n), O(n log n), O(1), O(log n), O(n<sup>2</sup>)
- c) O(n<sup>2</sup>), O(n log n), O(n), O(log n), O(1)

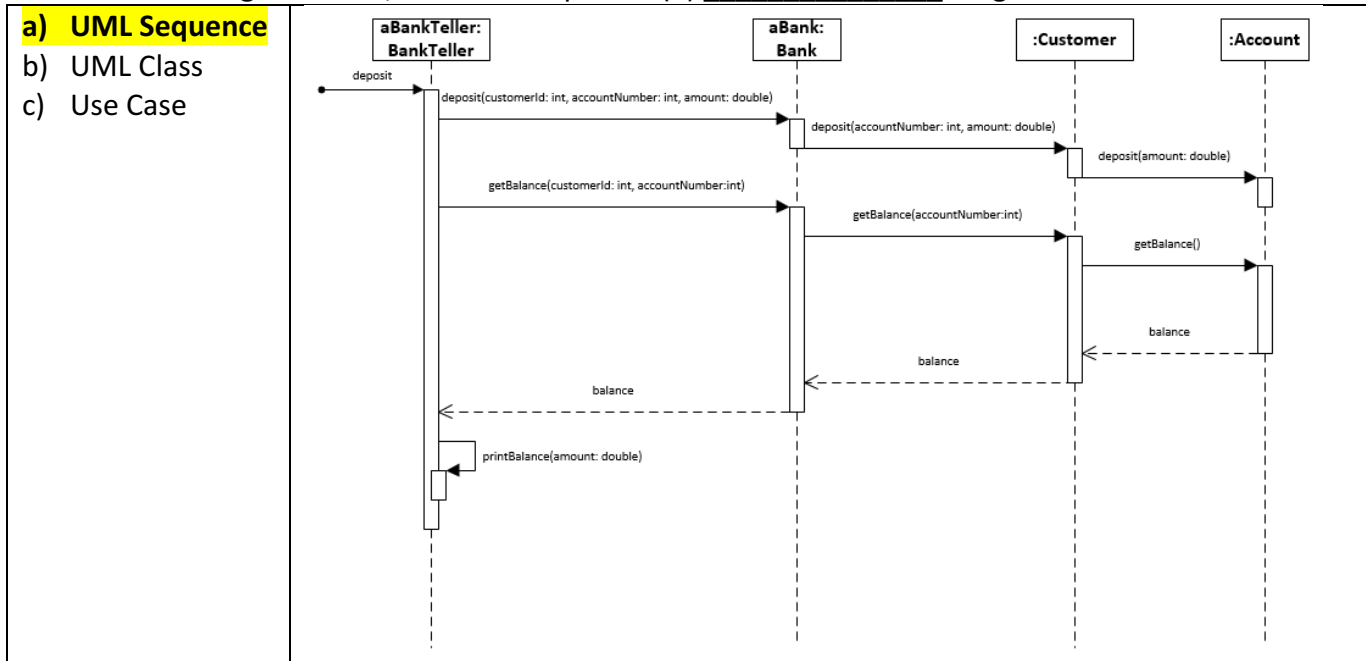

21. Which Abstract Data Type would you use for simulating people waiting in a line?

- a) Stack
- b) In7t6d**
- c) Vector

22. Which of the following array sorting algorithms has Big-O(n log n)?

- a) Selection Sort
- b) Bubble Sort
- c) Merge Sort**

23. Examine the figure below, it is an example of a(n) \_\_\_\_\_ Diagram.

24. The following code is an example of the \_\_\_\_\_ design pattern.

```
Comparator comp = new ComparatorAdapter(){
 @Override
 public boolean compare(double a, double b){
 return (a < b);
 }
};
```

- a) Singleton
- b) Builder
- c) Adapter**

25. Which of the following swing GUI components allows a user to enter text?

- a) JLabel
- b) JTextField**
- c) JButton

26. Swing components are \_\_\_\_\_.
- a) **Lightweight**
  - b) Heavyweight
  - c) Medium-weight
27. Which of the following is not a layout used with Java Swing?
- a) FlowLayout
  - b) BorderLayout
  - c) **LinearLayout**
28. In the Java coordinate system \_\_\_\_\_.
- a) **x increases towards the right, y increases as you move down.**
  - b) x decreases towards the right, y decreases as you move down.
  - c) x increases towards the right, y increases as you move up.
29. When using the Observer Design Pattern with Java's built in support your Subject subclasses \_\_\_\_\_.
- a) java.util.Observer
  - b) **java.util.Observable**
  - c) java.util.Subject
30. In the Model View Controller Design Pattern what component typically takes on the role of interacting with the user?
- a) Model
  - b) **View**
  - c) Controller

Part 2: Short Answer Questions 40 points [points vary per question, spend time wisely]

1. Given the code samples from classes Person and PersonBuilder write the constructor inside Person needed to complete the builder design pattern. [7 points]

```
public class PersonBuilder{
 private int personId;
 private String firstName;
 private String email;
 public int getPersonID(){ return personId; }
 public String getFirstName(){ return firstName; }
 public String getEmail(){ return email; }
 private PersonBuilder() { }
 public static PersonBuilder create() { return new PersonBuilder(); }
 public PersonBuilder personId (int personId) { this.personId = personId; return this; }
 public PersonBuilder firstName(String firstName) { this.firstName = firstName; return this; }
 public PersonBuilder email (String email) { this.email = email; return this; }

 public Person build() { return new Person(this); } // Call to the constructor
}
public class Person{
 private int personId;
 private String firstName;
 private String email;

 public int getPersonID(){ return personId; }
 public void setPersonID(int personID){this.personId = personID; }

 public String getFirstName(){ return firstName; }
 public void setLirstName(String firstName){this.firstName = firstName;}

 public String getEmail(){ return email; }
 public void setEmail(String email){this.email = email;}
```

// TO DO: Write Constructor to complete Builder Design Pattern

// Answer:

```
public Person(PersonBuilder builder)
{
 personId = builder.getPersonID();
 firstName = builder.getFirstName();
 email = builder.getEmail();
}
```

2. Create a UML Sequence Diagram based on the following class names, you may select method names that make sense to complete the diagram. [7 points]

Classes: Coach, Runner, Sprint

Scenario: The three objects interacting in the scenario have all been instantiated. The coach needs to retrieve the maximum sprint time, in seconds, from runner and then print this value to the console.

3. Matching: Examine the code samples below, what is the Big-O for each? [6 points]

Possible Big-O:  $O(1)$   $O(n)$   $O(n^2)$   $O(\log n)$

Each Big-O is only used once, only 3 are needed

i)  
`for(int i = 1; i < n; i++){}`

Big-O is (answer here) \_\_\_\_\_  **$O(n)$**

ii)  
`for(int i = 1; i < n; i = i * 2){}`

Big-O is (answer here) \_\_\_\_\_  **$O(\log n)$**

iii)  
`for(int i = 1; i < n; i++){  
 for(int k = 1; k < n; k++){  
 }  
}`

Big-O is (answer here) \_\_\_\_\_  **$O(n^2)$**

4. Given the screen shot and starter code, write the needed Java 2D code to complete the image. [10 points]
- The Panel is 300 pixels wide and 300 pixels tall.
  - The upper circle in Black is drawn from the upper left corner of the panel and has a diameter  $\frac{1}{2}$  the width of the panel
  - The lower circle in DarkGray is drawn from the middle of the panel and has a diameter  $\frac{1}{2}$  the width of the panel.

```
import javax.swing.JPanel;
import java.awt.Color;
import java.awt.Graphics;
import java.awt.Dimension;
public class A extends JPanel {
 public A(){
 super();
 setPreferredSize(new Dimension(300,300));
 }
 @Override
 public void paintComponent(Graphics g){
 // Calculate the needed values
 // (w is width, h is height, x is x-coordinate, y is y-coordinate)

 int wUpper = 300 / 2; // one half width of panel

 int hUpper = 300 / 2; // one half height of panel

 int xUpper = 0; // 0,0 is for upper top-left corner

 int yUpper = 0;

 int wLower = 300 / 2;

 int hLower = 300 / 2;

 int xLower = 300 / 2; // calculate x as one half of width

 int yLower = 300 / 2; // calculate y as one half of height

 g.setColor(Color.black);
 g.fillOval(xUpper, yUpper, wUpper, hUpper);
 g.setColor(Color.darkGray);
 g.fillOval(xLower, yLower, wLower, hLower);
 }
}
```

5. Use the UML below to write the code for a simple delegate design pattern (both classes)  
[10 points]

```
public class TunaModel{
 private double weight;
 public double getWeight(){ return weight; }
 public void setWeight(double weight){ this. weight = weight; }
}

public class TunaTheory{
 private TunaModel model = new TunaModel();
 public double getWeight(){ return model.getWeight(); }
 public void setWeight(double weight){ model.setWeight(weight); }
}
```

---

**Term Test 1 A (15W)****Instructions (Read These):**

- **Starting the test before permission has been given will result in an immediate zero. Everyone starts at the same time once everyone is seated.**
- **Turn mobile phones / mobile devices off**
- **Remove all papers, books, laptops etc. from the desks**
- **Using any electronic device – laptop, mobile phone, PDA, calculator during the test will result in immediate zero**
- **Strictly no talking for any reason during the test or you get zero, unless to ask the professor a question. If you complete your test early, do not talk to friends who are still taking the test.**
- **Write your name at the top of the test document on page 1 and at the end for part 2, as well as on the Multiple Choice Answer Sheet.**
- **Assume code samples shown will run / compile as part of a larger code listing, unless there is an option provided “does not compile” or similar for a possible answer**
- **All questions are within the context of Java, and computer programming**
- **If you see what you think may be a mistake raise your hand and ask quietly when I reach you**
- **Please do not leave the room during the first 30 minutes of the test.**
- **All test materials must be returned at the end of the test**

Additional Notes:

**(No Calculators allowed)**

The test is in two parts, Part 1 is multiple-choice questions, and Part 2 is short answer.

Place your answers for Part 1 onto the provided answer sheet, only the answer sheet will be used for grading Part 1

Note: Make sure your handwriting is readable; I suggest using upper case letters ensuring that D looks different from B.

Place your answers for Part 2 into the spaces provided. If you need more room clearly note that your answer is continued on extra paper, and on the extra paper clearly indicate what question you are continuing.

There is an extra blank page at the end of the test you can detach to use as scrap paper, remember to return all sheets at the end of the test, including scrap paper.

Ensure that your name is on all parts of the test:

- Multiple Choice answer sheet
- The test (this document)
- Any extra sheets you detach

Total Test Time will be 1hour

Part 1 Multiple Choice: Each question is worth 3 points; there is only one correct answer per question.

1. Which programming language combines data and functions that operate on the data into a single unit?  
**a) Object Oriented Programming**  
b) Procedural Programming  
c) Functional Programming
2. The \_\_\_\_\_ states: Each component of a system should have sufficient rights and privileges to accomplish its designated task, but no additional rights or privileges.  
**a) Principle of Least Privilege**  
b) Open/Closed Principle  
c) Principle of Least Astonishment
3. Given the code sample below, what command line command will compile the class and create the needed folders on the hard drive as well?  

```
package network;
public class ShannonsTheorem{ }
```

  
a) javac ShannonsTheorem.java  
b) javac -package ShannonsTheorem.java  
**c) javac -d . ShannonsTheorem.java**
4. \_\_\_\_\_ are core solutions to common problems.  
**a) Design patterns**  
b) Inheritance  
c) Principles
5. Which of the following design patterns ensures that only one instance of a class is made?  
a) Builder Design Pattern  
b) Delegate Design Pattern  
**c) Singleton Design Pattern**
6. Which of the following is not one of the 3 steps used in implementing a Singleton Design Pattern?  
**a) public static final field variable to refer to one instance of the object**  
b) private constructor  
c) public static read-only property to grant access to the one instance of the object
7. You are designing a banking application and need different behaviours for the accounts, e.g. change from Savings to Chequing behaviour. One solution is to use the \_\_\_\_\_ design pattern to solve this problem.  
a) Composite (A)  
**a) Delegate (B)**  
b) Singleton (C)
8. Professional Java programmers follow \_\_\_\_\_ to help ensure their code is readable.  
**a) Coding Conventions**  
b) Compiler Requirements  
c) Proprietary Principle Practices (i.e. PPP)

9. A \_\_\_\_\_ method calls itself either directly or indirectly through another method. Termination of the method calls is controlled when a base case is reached.

- a) Overloaded
- b) Overridden
- c) Recursive**

10. Given the code sample below, what is the program output?

```
public static int recurse(int n){
 if(n > 1){
 return n - recurse(n / 2);
 }
 else{
 return n;
 }
}
public static void main(String[] args){
 System.out.println(recurse(6));
}
```

- a) 3
- b) 4**
- c) 5

11. Given the following code, what will be the output from the program from System.out.println(s1 == s2);

```
public static void main(String[] args){
 java.util.Scanner input = new java.util.Scanner(System.in);
 String s1 = "abc";
 System.out.print("Enter: abc");
 String s2 = input.nextLine(); // assume user will enter abc
 s2 = s2.intern();
 System.out.println(s1 == s2); // what is output from this line?
}
```

- a) false
- b) true**
- c) "abc == abc"

12. The following figure came from your textbook; it depicts a classic recursion problem computer scientists struggle with to understand. What is the name of this classic puzzle?

- a) Disks and Sticks
- b) Towers of Hanoi**
- c) Slides and Ladders

Reference: Deitel, Paul, Harvey Deitel. *CST8110 Java How to Program (early objects) 9e, 9th Edition*. Pearson Learning Solutions, 02/2011. VitalBook file.

13. Select the sequence of Big-O's from best case to worse case moving from left (best) to worse (right).

- a) O(1), O(log n), O(n), O(n log n), O(n<sup>2</sup>)**
- b) O(log n), O(1), O(n log n), O(n), O(n<sup>2</sup>)
- c) O(n<sup>2</sup>), O(n log n), O(n), O(log n), O(1)

14. What is the Big-O for a typical merge sort algorithm?
- a)  $O(1)$
  - b)  $O(n^2)$
  - c)  $O(n \log n)$**
15. Which Java Collections API class, from the three below, has a lookup Big-O of  $O(1)$ ?
- a) ArrayList
  - b) TreeSet
  - c) HashSet**
16. Which of the following is not a Container class in Java Swing?
- a) JFrame
  - b) JPanel
  - c) JLabel**
17. What is the default layout manager of a JFrame?
- a) BorderLayout**
  - b) GridLayout
  - c) FlowLayout
18. When a Java class implements the interface `java.util.Observer` what is the one method that needs to be overridden?
- a) `acceptNotification(Observable o, Object args)`
  - b) `update(Observable o, Object args)`**
  - c) `actionUpdateListener(Observable wasUpdated)`
19. When inheriting code from `java.lang.Observable` before calling method `notifyObservers()` it is important to call method \_\_\_\_\_ first.
- a) `hasChanged()`
  - b) `setChanged()`**
  - c) `clearChanged()`
20. In the MVC design pattern what part stores and manipulates the data?
- a) View
  - b) Controller
  - c) Model**

21. Part 2 Short Answer Questions (40%): Complete all questions. Each question is 8 points.

Question 1: [8 Points]

- Given the starter code below, refactor it so the class implements a Singleton Design Pattern. (i.e. add two things and make something private)

```
import javax.swing.*;
import java.awt.*;
public class PersonDetails extends JFrame{
 private JLabel personJLabel = new JLabel();

 private static final PersonDetails instance = new PersonDetails();

 private
 public PersonDetails(){
 this.setDefaultCloseOperation(JFrame.HIDE_ON_CLOSE);
 this.add(personJLabel, BorderLayout.CENTER);
 this.setSize(300, 200);
 this.setVisible(true);
 }

 public static PersonDetails getInstance(){ return instance; }

}
```

Question 2: [8 Points]

- You are working on a class Person that has three fields: firstName, lastName, and age. (String, String, int)
- Write an overridden toString() method that uses a StringBuilder to generate and return a String similar to: [ firstName, lastName, 39 ] where "firstName", "lastName", and 39 were values contained in the respective fields.

```
public class Person {
 private String firstName;
 private String lastName;
 private int age;
 public Person(){
 firstName = "firstTest";
 lastName = "lastTest";
 age = 39;
 }
 public String getFirstName(){ return firstName; }
 public void setFirstName(String firstName){
 this.firstName = firstName;
 }
 public String getLastName(){ return lastName; }
 public void setLastName(String lastName){
 this.lastName = lastName;
 }
 public int getAge(){ return age; }
 public void setAge(int age){
 this.age = age;
 }
}
/* Your toString() goes here: */
```

**@Override**

```
public String toString(){
 StringBuilder builder = new StringBuilder();
 builder.append("[").append(firstName).append(", ")
 .append(lastName).append(", ")
 .append(age).append("]");
 return builder.toString();
}
```

}

Question 3: [8 Points]

- Given the JUnit4 starter code below complete the code needed to test the Accessor and Mutator for Bandwidth in class ShannonsModel (both in the same test method).
- Use a Phone line bandwidth of 3000.0D hertz as well as a Delta of 0.01 for the test.

```
package networktest;
import network.ShannonsModel;
import static org.junit.Assert.*;
import org.junit.After;
import org.junit.AfterClass;
import org.junit.Before;
import org.junit.BeforeClass;
import org.junit.Test;
public class ShannonsModelTest {
 private ShannonsModel model;
 @Before
 public void setUp() throws Exception {
 model = new ShannonsModel();
 }
 @After
 public void tearDown() throws Exception {
 model = null;
 }
 @Test
 public void testThatBandwidthAccessorAndMutatorWorks(){
 /* Your code here */
 double bandwidth = 3000.0D
 double delta = 0.01D
 model.setBandwidth(bandwidth);
 assertEquals(
 "get or set Bandwidth test failed",
 bandwidth,
 model.getBandwidth(),
 delta);
 }
}
```

}

Question 4: [8 points]

- Using the starter code below add three JButtons to the JFrame to get a similar layout as shown in the screen shot.
- Use the default layout manager for JFrame.

```
import java.awt.BorderLayout;
import javax.swing.JButton;
import javax.swing.JFrame;
public class ButtonsJFrame extends JFrame {
 private JButton oneJButton;
 private JButton twoJButton;
 private JButton threeJButton;
 public ButtonsJFrame(){
 super("Buttons");
 this.setDefaultCloseOperation(JFrame.EXIT_ON_CLOSE);

 configureButtons();

 this.pack();
 this.setVisible(true);
 }

 private void configureButtons(){
 /* Your Code Here */
 oneJButton = new JButton("West");
 twoJButton = new JButton("Center");
 threeJButton = new JButton("East");
 this.add(oneJButton, BorderLayout.WEST);
 this.add(twoJButton, BorderLayout.CENTER);
 this.add(threeJButton, BorderLayout.EAST);
 }
}
```

}

Question 5: [8 points] in two parts 4 points each

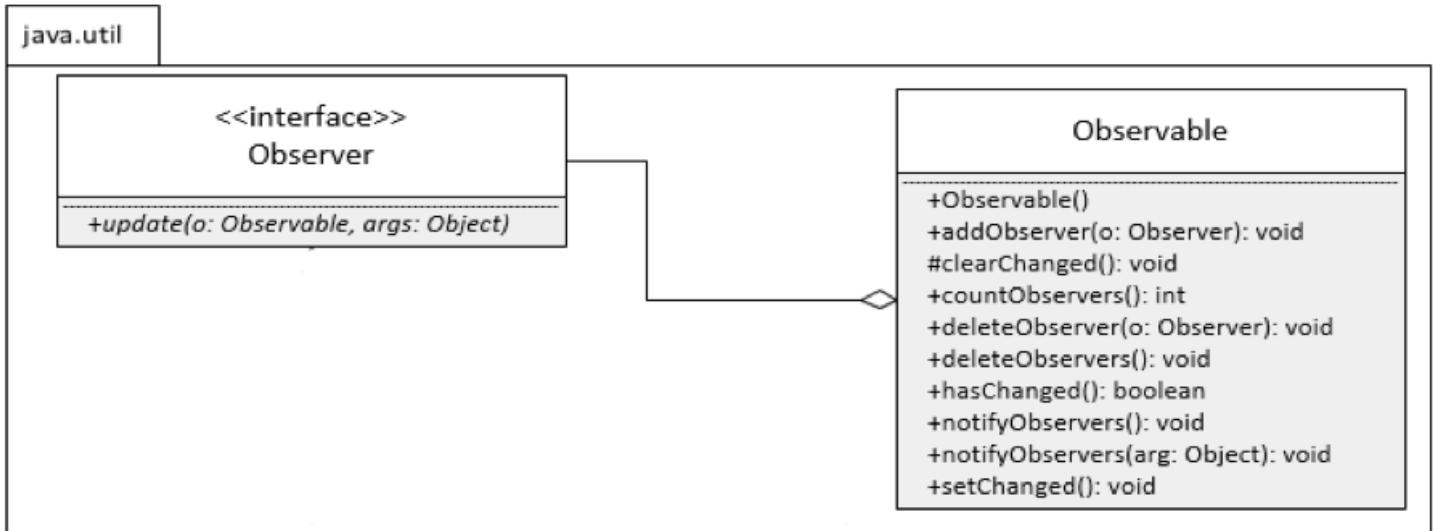

- Part 1:
- Using the UML Diagram provided as a reference Write the code for:
- a class named PersonSubject (extends java.util.Observable)
  - add one field firstName with a get and set method and notify any observers that the firstName changed when setFirstName(String firstName) is called.
  - Tip: There is no need to write a constructor for this class in the test.

```
import java.util.Observable;
public class PersonSubject extends Observable {
 private String firstName;
 public String getFirstName(){return firstName;}
 public void setFirstName(String firstName){
 this.firstName = firstName;
 setChanged();
 notifyObservers();
 }
}
```

Question 5: [8 points] in two parts 4 points each

- Part 2:
- Using the UML Diagram provided as a reference Write the code for:
- a class named PersonObserver (implements java.util.Observer)
- Override method update and print out the first name from the PersonSubject (System.out...)

```
import java.util.Observable;
import java.util.Observer;
public class PersonObserver implements Observer {
 @Override
 public void update(Observable o, Object arg) {
 if(o instanceof PersonSubject){
 PersonSubject person = (PersonSubject)o;
 System.out.println(person.getFirstName());
 }
 }
}
```

Scrap Paper: Name \_\_\_\_\_

Note: Question numbers are vertical down the page

Full Name: \_\_\_\_\_

| Question Number | Letter Answer |
|-----------------|---------------|
| 1               |               |
| 2               |               |
| 3               |               |
| 4               |               |

| 19              |               |
| 20              |               |

1 Assume that the following code snippet exists in a java program that is otherwise valid . (2 points)

```

int thisArray[][] = {
 {1, 2, 3, 4, 5},
 {2, 4, 6, 8, 10},
 {3, 6, 9, 12, 15},
 {4, 8, 12, 16, 20},
 {5, 10, 15, 20, 25}};

nextRow:
for (int row = 1; row <= 5; row ++){
 for (int column = 1; column <= 5; column++) {
 if (column > row)
 continue nextRow ;
 System.out.print(thisArray[row-1][column-1] + "\n");
 }
 System.out.println(" ");
}
System.out.println("\n*** ");

```

Neatly, Hand print the output from this snippet.

```

1
2
4
3
6
9
4
8
12
16
5
10
15
20
25

```

\*\*\*

2 Provide a full description of the get/set pattern. (4 marks)

**The get/set pattern provides the functionality for retrieving and updating attribute values. Get returns an instance of the value object, or a collection of values, set changes the value or a collection of values. No other functionality should be included unless required by a specific design pattern implementation.**

3 Draw and label the UML diagram for model-view-controller architecture. (4 marks) (arrows should be included in this diagram)

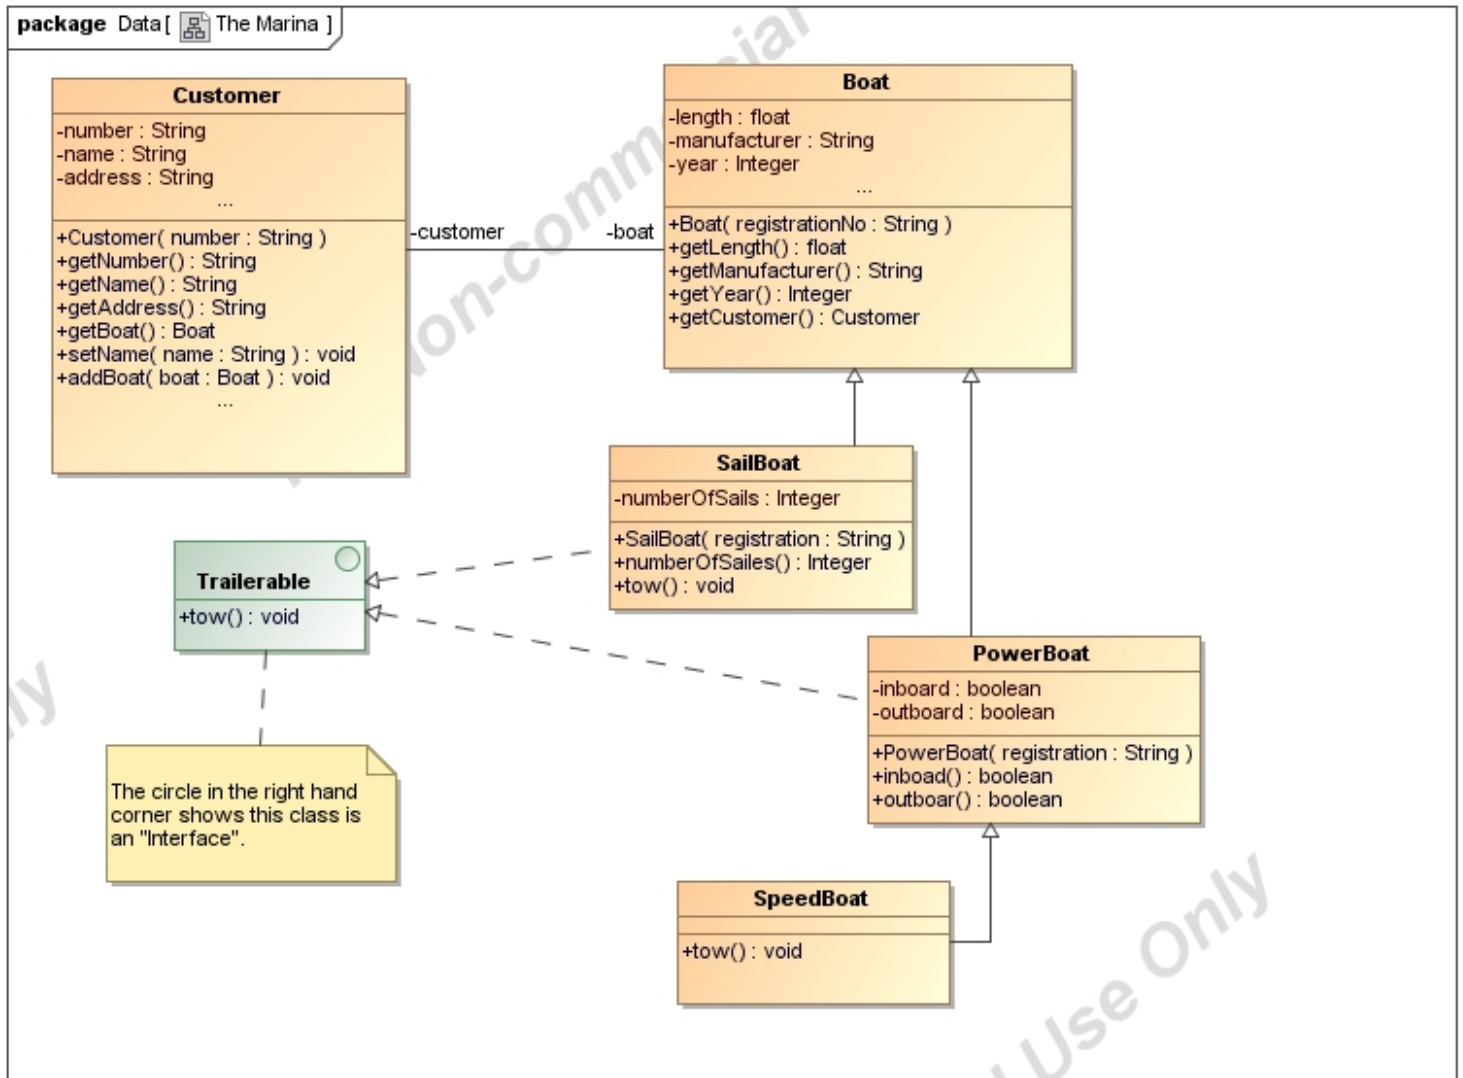

- 4 Explain the Observer pattern (including it's purpose , include a UML diagram) (4 marks)

The observer pattern provides a way for implementing an interrupt driven architecture between classes, or quite simply it allows one object to “observe” another object. The pattern implements the model-view paradigm. The Observer pattern allows the subject (observable object) to send events to registered observer objects normally indicating that a change has occurred in the subject object. This pattern decouples the observer from the observable object (subject). The observable object doesn't need to know anything about its observers other than their ability to respond to an update() message.

- 5 The Java API contains a number of implementations of the “Adapter” design pattern. Explain one of the implementations and where/why you might use it in your code. (6 marks)

**Any ...Adapter class from the API would do. Include not only the adaption aspect but the ability to extend the class and override method implementation (saves writing code)**

```

public class Customer {
 public Customer(String number) { this.number = number; }
 public String getNumber() { return number; }
 public String getName() { return name; }
 public String getAddress() { return address; }
 public Boat getBoat() { return boat; }
 public void setName(String name) { this.name = name; }
 public void addBoat(Boat boat) { this.boat = boat; }
 private String number;
 private String name;
 private String address;
 private Boat boat;
}

```

```

public class Boat{
 public Boat() {}
 public Boat(String registrationNo) {}
 public float getLength() { return length; }
 public String getManufacturer() { return manufacturer; }
 public Integer getYear() { return year; }
}

```

```
public Customer getCustomer() { return customer;}
private float length;
private String manufacturer;
private Integer year;
private Customer customer;
}

public interface Trailable {
 public void tow();
}

public abstract class PowerBoat extends Boat implements Trailable {
 public PowerBoat(String registrationNo) { super(registrationNo); }
 public boolean inBoard() { return inboard; }
 public boolean outBoar() { return outboard; }
 private boolean inboard;
 private boolean outboard;
}

public class SailBoat extends Boat implements Trailable {
 public SailBoat(String registrationNo) { super(registrationNo); }
 public Integer numberOfSails() { return numberOfSails; }
 public void tow() {}
 private Integer numberOfSails;
}

public class SpeedBoat extends PowerBoat {
 public void tow() {}
}
```

**BONUS QUESTION:** Earn up to 4 bonus marks for a COMPLETE answer (test score cannot exceed 100%).

From the following code, describe where the memory leak(s) occur(s) and explain why.

```
/**
 * Stack implementation using an array.
 */
public class Stack<ELE> {

 public Stack() { this(10); }

 public Stack(int initialCapacity) {
 this.elements = new ELE[initialCapacity];
 }

 public void push(ELE e) {
 ensureCapacity();
 elements[size++] = e;
 }

 public ELE pop() throws Exception {
 if (size == 0) throw new Exception("Empty queue");
 return elements[--size]; /* THIS IS THE LEAK, OBJECT REFERENCES MUST BE SET
 * TO A NULL FOR THE GARBAGE COLLECTOR TO RELEASE
 * THE MEMORY. Here we decrement the index into the array,
 * however, we leave the object reference in the array. The
 * reference would not be set to null until we quit the program or
 * over-write the reference at this element position.
 */
 }

 public void ensureCapacity() {
 if (elements.length == size) {
 ELE[] oldElements = elements;
 elements = new ELE[2 * elements.length+1];
 System.arraycopy(oldElements, 0, elements, 0, size);
 }
 }

 private ELE[] elements;
 private int size = 0;

} /* End of Class: stack.java */
```

**Cst8288**

• **Question 1**

1 out of 1 points

Which of the following is not a valid comment in the Java programming language?

Answer

Selected Answer:

b.  
<!-- A comment -->  
int x;

Correct Answer:

b.  
<!-- A comment -->  
int x;

• **Question 2**

0 out of 1 points

What is the nature of data typing in the Java programming language?

Answer

Selected Answer:

c.  
Untyped

Correct Answer:

a.  
Strongly typed

• **Question 3**

1 out of 1 points

What is the value of days.length for the following array?

```
String[] days = {"Monday", "Tuesday", "Wednesday",
"Thursday", "Friday", "Saturday"};
```

Answer

Selected Answer:

c.  
6

Correct Answer:

c.  
6

• **Question 4**

1 out of 1 points

An overridden method can be in the same class.

Answer

Selected Answer:

✔ False

Correct Answer:

✔ False

• **Question 5**

1 out of 1 points

What's printed when the following program is executed:

```
class WhatsPrinted {
 public void dolt(int achar) {
 System.out.println(achar+achar);
 }
 public static void main (String args[]) {
 new WhatsPrinted().dolt('B');
 }
}
```

Answer

Selected Answer:

✔ a.  
132 (The ASCII value of B is 42hex)

Correct Answer:

✔ a.  
132 (The ASCII value of B is 42hex)

• **Question 6**

1 out of 1 points

When a concrete class implements an interface, it must provide behavior for...

Answer

Selected Answer:

d.

All methods defined in that interface.

Correct Answer:

d.

All methods defined in that interface.

### • Question 7

1 out of 1 points

What results from running the following code?

```
1. public class Short {
2. public static void main(String args[]) {
3. StringBuilder s = new StringBuilder("Hello");
4. if((s.length() >= 5) && (s.append(" There").equals("False")))
5. ; // do nothing
6. System.out.println("value is " + s);
7. }
8. }
```

Answer

Selected Answer:

a.

The output: value is Hello There

Correct Answer:

a.

The output: value is Hello There

### • Question 8

1 out of 1 points

Consider the following code:

```
1. Object ob = new Object();
2. String stringarr[] = new String[50];
```

- 3. Float floater = new Float(3.14f);
- 4.
- 5. ob = stringarr;
- 6. ob = stringarr[5];
- 7. floater = ob;
- 8. ob = floater;

Which line(s) above will not compile?

Answer

Selected Answer:

c.  
7

Correct Answer:

c.  
7

### • Question 9

1 out of 1 points

Your application constructs a frame by calling `JFrame f = new JFrame();` but when you run the code, the frame does not appear on the screen. What code will make the frame appear? (Choose one.)

Answer

Selected Answer:

d.  
`f.setVisible(true);`

Correct Answer:

d.  
`f.setVisible(true);`

### • Question 10

1 out of 1 points

A protected method may be overridden by a public method.

Answer

Selected Answer:

True

Correct Answer:

True

• **Question 11**

0 out of 1 points

A protected method may be overridden by a private method.

Answer

Selected Answer:

Correct Answer:

True

False

• **Question 12**

0 out of 1 points

Which of the following statements is correct? (Choose one)

Answer

Selected Answer:

Correct Answer:

a.

Only primitives are converted automatically; to change the type of an object reference, you have to do a cast.

c.

Both primitives and object references can be both converted and cast.

• **Question 13**

1 out of 1 points

In the code fragment below, after execution of line 1, sbuf references an instance of the StringBuilder class. After execution of line 2, sbuf still references the same instance.

```
1. StringBuilder sbuf = new StringBuilder("abcde");
2. sbuf.append("xyz");
```

Answer

Selected Answer:

✔ True

Correct Answer:

✔ True

### • Question 14

0 out of 1 points

How many bytes does the following code write to file destfile?

```
1. try {
2. FileOutputStream fos = new FileOutputStream("destfile");
3. DataOutputStream dos = new DataOutputStream(fos);
4. dos.writeInt(3);
5. dos.writeDouble(0.0001);
6. dos.close();
7. fos.close();
8. }
9. catch (IOException e) { }
```

Answer

Selected Answer:

✘ b.  
8

Correct Answer:

✔ c.  
12

### • Question 15

0 out of 1 points

Given the code below (making no other changes), which access modifiers (public, protected, or private) can legally be placed before aMethod() on line 2?

```
1. class SomeClass
2. { void methodA() { }
3. }
4.
5. class AnotherClass extends SomeClass
6. { void methodA() { }
7. }
```

Answer

Selected Answer:

 b.  
protected

Correct Answer:

 c.  
private

• **Question 16**

1 out of 1 points

Which one statement is true about the code below?

```
1. class HasStatic
2. {
3. private static int x = 100;
4.
5. public static void main(String args[])
6. {
7. HasStatic hs1 = new HasStatic();
8. hs1.x++;
9. HasStatic hs2 = new HasStatic();
10. hs2.x++;
11. hs1 = new HasStatic();
12. hs1.x++;
13. HasStatic.x++;
14. System.out.println("x = " + x+1);
15. }
16. }
```

Answer

Selected Answer:

 d.  
The program compiles, and the output is x = 1041

Correct Answer:

 d.  
The program compiles, and the output is x = 1041

• **Question 17**

1 out of 1 points

Given the following declaration:

```
public class AddMult
 extends Applet
 implements ActionListener
```

In the phrase 'implements ActionListener', ActionListener refers to

Answer

Selected Answer:

an interface.

Correct Answer:

an interface.

### • Question 18

1 out of 1 points

An applet will run in almost any browser because...

Answer

Selected Answer:

b.  
The browser has a built-in JVM.

Correct Answer:

b.  
The browser has a built-in JVM.

### • Question 19

1 out of 1 points

What is the purpose of the main method?

Answer

Selected Answer:

d.

To act as the entry point for the program.

Correct Answer:

d.

To act as the entry point for the program.

### • Question 20

1 out of 1 points

Which of the following expressions are legal? (Choose one)

Answer

Selected Answer:

d.

`int x = 6; x = ++ ~x;`

Correct Answer:

d.

`int x = 6; x = ++ ~x;`

### • Question 21

1 out of 1 points

What one statement is true about the code fragment below?

1. `String s = "abcde";`
2. `StringBuilder s1 = new StringBuilder("abcde");`
3. `if (s.equals(s1))`
4. `s1 = null;`
5. `if (s1.equals(s))`
6. `s = null;`

Answer

Selected Answer:

d.

Compilation and Execution succeeds.

Correct Answer:

d.

Compilation and Execution succeeds.

• **Question 22**

1 out of 1 points

Consider the following classes, declared in separate source files:

```
1. public class Base {
2. public void method(int i) {
3. System.out.println("Value is " + i);
4. }
5. }
```

```
1. public class Sub extends Base {
2. public void method(int j) {
3. System.out.println("This value is " + j);
4. }
5. public void method(String s) {
6. System.out.println("I was passed " + s);
7. }
8. public static void main(String args[]) {
9. Base b1 = new Base();
10. Base b2 = new Sub();
11. b1.method(5);
12. b2.method(6);
13. }
14. }
```

What output results when the main method of the class Sub is run?

Answer

Selected Answer:

✔  
Value is 5  
This value is 6

Correct Answer:

✔  
Value is 5  
This value is 6

• **Question 23**

1 out of 1 points

The code below draws a line. What color is the line?

1. `g.setColor(Color.red.green.yellow.red.cyan);`

2. `g.drawLine(0, 0, 100, 100);`

Answer

Selected Answer:

d.  
Cyan

Correct Answer:

d.  
Cyan

• **Question 24**

0 out of 1 points

Which of the following signatures are valid for the `main()` method entry point of an application?

Answer

Selected Answer:

e.  
None of the answers are correct.

Correct Answer:

d.  
`public static void main( String gotStuff [ ] )`

• **Question 25**

1 out of 1 points

Design patterns \_\_\_\_\_.

Answer

Selected Answer:

c.  
are proven ways for implementing behavior that help increase cohesion and reduce coupling

Correct Answer:

c.  
are proven ways for implementing behavior that help increase cohesion and reduce coupling

• **Question 26**

1 out of 1 points

Refactoring refers to \_\_\_\_\_.

Answer

Selected Answer:

a.  
a process of refining a design to make it more flexible, expandable, and reusable

Correct Answer:

a.  
a process of refining a design to make it more flexible, expandable, and reusable

• **Question 27**

0 out of 1 points

The portion of a program within which you can reference a variable is the variable's \_\_\_\_\_.

Answer

Selected Answer:

d.  
Domain

Correct Answer:

c.  
Scope

### Question 28

Assume that the following code snippet exists in a java program that is otherwise valid .

```
int thisArray[][] = { {1, 2, 3, 4, 5},
{2, 4, 6, 8, 10},
{3, 6, 9, 12, 15},
{4, 8, 12, 16, 20},
{5, 10, 15, 20, 25}};
nextRow:
for (int row = 1; row <= 5; row ++){
for (int column = 1; column <= 5; column++) {
if (column > row)
continue nextRow ;
System.out.print(thisArray[row-1][column-1] + "\n");
}
System.out.println(" ");
}
System.out.println("\n*** ");
```

Print the exact output from this snippet.

When using the Observer Design Pattern with Java's built in support your observers implement interface:

Selected Answer:  c.

Answers:  a.

java.util.Observable

java.util.Observer

b.

you just need an update method, no interface needed

c.

java.util.Observable

d.

java.util.Subject

#### • Question 5

4 out of 4 points

The following code is an example of using the \_\_\_\_\_ design pattern.

```
Person p = PersonBuilder.create().firstName("First").lastName("Last")
 .personId(1).phone("123 123 1234").email("a@b.com").build()
```

Selected Answer:  a.

Fluent (Builder)

Answers:  a.

Fluent (Builder)

- b.  
Delegate
- c.  
Singleton
- d.  
MVC

• **Question 6**

4 out of 4 points

Which one of the JUnit methods below is best used for comparing two double values?

Selected Answer:  b.

`assertEquals(String message, double expected, double actual, double delta)`

Answers:

a.

`assertTrue(String message, (expected == actual) )`

 b.

`assertEquals(String message, double expected, double actual, double delta)`

c.

`assertEquals(String message, double expected, double actual)`

• **Question 7**

0 out of 4 points

Whats is MVC?

Selected Answer:  c.

this pattern divides all the code in 3 exact portions to be run from different java files. instead of one big file.

Answers: a.

programmers did not have anything better to do so they made up yet another pattern

✔b.

Decouples logic from data and presentation by separating logic types into individual classes

c.

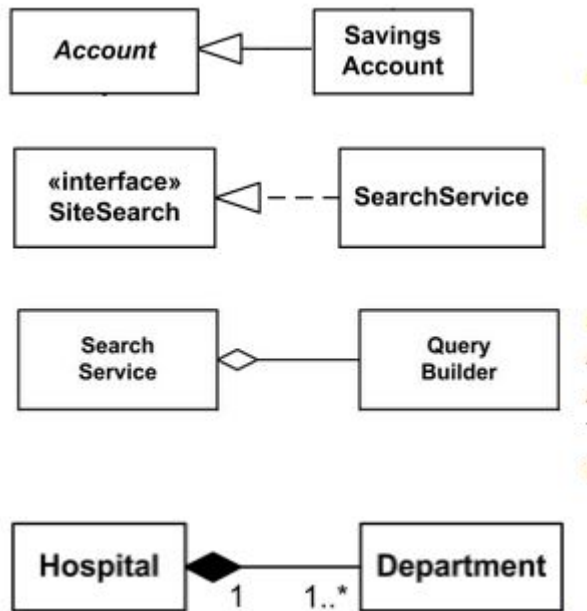

this pattern divides all the code in 3 exact portions to be run from different java files. instead of one big file.

Answer Feedback: this pattern tightly connect all logics together to prevent unnecessary upgrades

### • Question 8

4 out of 4 points

match UML class digram arrows to their description

•

Question

Correct Match

Selected Match

✔a.

Generalization  
:  
B Inherits  
from A

✔d.

Interface:  
A Implements  
B

✔c.

Aggregation:  
An A is made  
up of B  
This is a part-  
to-whole  
relationship,  
where A is the  
whole and B  
is the part. In  
code, this  
essentially  
implies A has  
fields of type  
B.

✔b.

Composition:  
An A is made  
up of B with  
lifetime  
dependency  
That is, A  
aggregates B,  
and if the A is  
destroyed, its  
B are  
destroyed as  
well.

✔a.

Generalization  
:  
B Inherits  
from A

✔d.

Interface:  
A Implements  
B

✔c.

Aggregation:  
An A is made  
up of B  
This is a part-  
to-whole  
relationship,  
where A is the  
whole and B  
is the part. In  
code, this  
essentially  
implies A has

•

### All Answer Choices

A.

create a pool of threads that automatically creates threads when need, with size of min 0 and max Integer.MAX\_VALUE. inactive threads are killed after 60 seconds.

B.

create a pool of threads with given fixed number of threads

C.

- create a pool of threads with one thread only

### • Question 12

4 out of 4 points

which statement is true?

```
public class SingleThing{

 private static final SingleThing thing = new SingleThing()

 private SingleThing() {}

 public static SingleThing instance() {
 return thing;
 }
}
```

Selected  
Answer:

c.

this singleton has eager initialization. object is created at class loading time.

Answers:

a.

singleton object can never have an instance, it is by design only static

b.

this singleton has lazy initialization. object is created when calling instance()

c.

this singleton has eager initialization. object is created at class loading time.

d.

there was not enough hints in this question, i will complain about it after midterm.

• **Question 13**

4 out of 4 points

Given the code below (making no other changes), which access modifiers (public, protected, or private) can legally be placed before print() in BaseClass?

```
class BaseClass {

 void print() {
 System.out.println("Base");
 }
}

class SubClass extends BaseClass {

 void print() {
 System.out.println("Sub");
 }
}
```

Selected Answer:  d.

protected

Answers:

a.

public

b.

friend

c.

private

d.

protected

• **Question 14**

2 out of 2 points

What is the nature of data typing in the Java programming language?

Selected Answer:  c.

Answers: Strongly typed

a.

Typed Like JavaScript

b.

Weakly typed

c.

Strongly typed

d.

Untyped

e.

Typed like C++

• **Question 15**

2 out of 2 points

Refactoring refers to \_\_\_\_\_.

Selected Answer:  d.

Answer:

a process of refining a design to make it more flexible, expandable, and reusable

Answers:

a.

the use of the Java Reflection API

b.

adding functionality to a design

c.

the separation of presentation logic from domain logic.

✔d.

a process of refining a design to make it more flexible, expandable, and reusable

### • Question 16

2 out of 2 points

Match data structures with their definitions.

•

can add and remove from both ends. it is based on connecting object together, called Nodes.

can add and remove from both ends. it is based on connecting object together, called Nodes.

•

### All Answer Choices

A.

First In Last Out policy. can be used to solve tower of hanoi.

B.

First In First Out policy. used for problems like buffering data to be rendered.

C.

can add or remove from both ends and it is based on array implementation.

D.

can add and remove from both ends. it is based on connecting object together, called Nodes.

E.

•

who needs data structures, just store everything in single variables.

### • Question 17

2 out of 2 points

A protected method may be overridden by a public method.

Selected Answer:  True

Answers:  True

False

### • Question 18

2 out of 2 points

Which line will not compile?

```
10 Object ob = new Object();
11
12 String stringarr[] = new String[50]
13
14 Float floater = new Float(3.14f);
15
16 ob = stringarr;
17
18 ob = stringarr[5];
19
20 floater = ob;
21
22 ob = floater;
```

Selected Answer:  b.

floater = ob;

Answers:

a.

ob = floater;

b.

floater = ob;

c.

ob = stringarr[5];

d.

ob = stringarr;

e.

All lines will compile

• Question 19

Created by Parin

2 out of 2 points

Which of the following is not one of the typical workflow steps when creating a JUnit test?

Selected Answer:  c.

Perform many tasks to be tested all at once inside one test method.

Answers: a.

none of the above

b.

Check results for the one task tested using an appropriate assert method.

c.

Perform many tasks to be tested all at once inside one test method.

d.

Prepare objects and variables (use meaningful variable names).

### • Question 20

2 out of 2 points

A protected method may be overridden by a private method.

Selected Answer:  False

Answers: True

False

### • Question 21

What is wrong with the Java class declaration below, with regard to coding conventions?

```
public class tuna_fish{}
```

Selected Answer:  a.

Class identifiers in Java should start with an upper case letter.

Answers:

a.

Class identifiers in Java should start with an upper case letter.

b.

Class identifiers in Java should use mixed case instead of underscores.

c.

Both of other options

### • Question 29

1 out of 1 points

Given the following declaration, what is Runnable?

```
public class BasicApplication extends Application implements Runnable
```

Selected Answer:

an interface.

Answers:

a class.

an interface.

a package.

an object.

### • Question 30

1 out of 1 points

Which of the following signatures are valid for the main( ) method entry point of an application?

Selected Answer:  d.

```
public static void main(String gotStuff [])
```

Created by Parin

Answers:

a.

`static void main (String [ ] )`

b.

`public void static main( )`

c.

`private static void main( String [ ] arg )`

d.

`public static void main( String gotStuff [ ] )`

e.

i dont know ask eclipse, it does it for me all the time

### • Question 31

1 out of 1 points

Which of the following is not one of Java's access modifiers?

Selected Answer: b.

friend

Answers:

a.

public

b.

friend

c.

protected

d.

default

### • Question 32

1 out of 1 points

What is the purpose of the main method?

Selected Answer:  c.

To act as the entry point for the program.

Answers: a.

To hold the APIs of the application.

b.

To create buttons and scrollbars.

c.

To act as the entry point for the program.

d.

To build a user interface.

### • Question 33

1 out of 1 points

Java applications are platform independent because?

Selected Answer:  c.

Java Byte Code (compiled Java) runs on JVM

Answers: a.

The CPU's have a built-in JVM.

b.

Java don't need a JVM.

c.

Java Byte Code (compiled Java) runs on JVM

d.

The server has a built-in JVM.

compare to objects using equals, can also take delta value for comparing double values

D.

compare to objects using ==, reference

E.

force a fail assert

F.

run this method before each run of any @Test methods

G.

run this method every time after each @Test methods

H.

used when method is for running a test

I.

runs once at the very beginning of a test class

J.

runs once at the very end of a test class

K.

used for checking false conditions, meaning the condition must result true

L.

- compare to objects using equals

### • Question 14

2 out of 2 points

Which of the following statements is correct? (Choose one)

Selected  c.

Answer:

Both primitives and object references can be both converted and cast.

Answers:

a.

Only primitives are converted automatically; to change the type of an object reference, you have to do a cast.

b.

Only object references are converted automatically; to change the type of a primitive, you have to do a cast.

c.

Both primitives and object references can be both converted and cast.

d.

Casting of numeric types may require a run-time check.

### • Question 15

2 out of 2 points

\_\_\_\_\_ refers to the visibility of variables. In other words, which parts of your program can see or use it.

Created by Parin

Selected Answer:  a.

Scope

Answers:  a.

Scope

b.

Range

c.

Domain

d.

Space

### • Question 16

2 out of 2 points

When using JUnit 4 what annotation is used to mark a test method?

Selected Answer:  b.

@Test

Answers: a.

i don't do old code, i only program in JUnit 5

b.

@Test

c.

@CheckCode

d.

@Testing

### • Question 17

2 out of 2 points

Consider the following classes, declared in separate source files, What output results when the main method of the class Sub is run?

```
class Sub extends Base{

 public void method(int j) {

 System.out.println("Sub is " + j);

 }

 public static void main(String args[]) {

 Base b1 = new Sub();
 Base b2 = new Base();

 b1.method(5);
 b2.method(6);

 }

}

class Base{

 public void method(int i) {

 System.out.println("Base is " + i);

 }

}
```

Selected Answer:  a.

Sub is 5  
Base is 6

Answers:  a.

Sub is 5  
Base is 6

b.

Sub is 5 Base is 6

c.

Sub is 6  
Base is 5

d.

Base is 6  
Base is 6

• **Question 18**

2 out of 2 points

Which of the following is not one of the typical workflow steps when creating a JUnit test?

Selected Answer:  b.

Perform many tasks to be tested all at once inside one test method.

Answers:

a.

none of the above

b.

Perform many tasks to be tested all at once inside one test method.

c.

Check results for the one task tested using an appropriate assert method.

d.

Prepare objects and variables (use meaningful variable names).

• **Question 19**

2 out of 2 points

Order the big O notations in ascending order.

Answers      Selected Answer

a.

a.

O(1)      O(1)

b.       b.

O(log n)      O(log n)

c.       c.

O(n)      O(n)

d.       d.

O(n log n)      O(n log n)

e.       e.

O(n<sup>2</sup>)      O(n<sup>2</sup>)

f.       f.

O(2n)      O(2n)

g.       g.

O(n!)      O(n!)

• **Question 20**

2 out of 2 points

Which sentence describes Principle of Least Privilege the best?

Selected  a.

Answer:

minimal rights and privileges to accomplish its task, but no additional rights or privileges

Answers:  a.

minimal rights and privileges to accomplish its task, but no additional rights or privileges

b.

full rights and privileges so it can do its task

c.

minimal rights and privileges or full rights and privileges so it can do its task

• **Question 21**

0 out of 2 points

Which of the following JavaFX components is typically only used to display text to a user?

Selected Answer:  b.

- Answers:
- TextField
  - a.
  - Button
  - b.
  - TextField
  -  c.
  - Label

• **Question 22**

2 out of 2 points

A protected method may be overridden by a public method.

Selected Answer:  True

- Answers:
-  True
  - False

• **Question 23**

2 out of 2 points

When a class (not abstract) implements an interface, it must provide behavior for...

Selected Answer:  d.

All methods defined in that interface.

Created by Parin

Answers:

a.

Only certain methods in an interface.

b.

Two methods defined in that interface.

c.

Any methods in a class.

d.

All methods defined in that interface.

### • Question 24

1 out of 1 points

In an Object Oriented programming language data and related functions are combined into a single unit called a(n) \_\_\_\_\_.

Selected Answer:  c.

Object

Answers: a.

i did not attend the lectures 😊

b.

Procedure

c.

Object

d.

Token

### • Question 26

1 out of 1 points

Given the following declaration, what is Runnable?

```
public class BasicApplication extends Application implements Runnable
```

Selected Answer:

an interface.

Answers: an object.

an interface.

a class.

a package.

### • Question 27

1 out of 1 points

What one statement is true about the code fragment below?

```
String str = "abcde";
StringBuilder strb = new StringBuilder("abcde")

if(str.equals(strb))
 System.out.println("String");

if(strb.equals(str))
 System.out.println("StringBuilder");
```

Selected  
Answer:

b.

program prints nothing

Answers:

a.

program print StringBuilder

b.

program prints nothing

c.

first if condition throws exception, because str and strb have different types

d.

first line throws exception, because the String constructor must be called explicitly

e.

program print String

## • Question 28

1 out of 1 points

Which of the following is not one of Java's access modifiers?

Selected Answer:  c.

- Answers:

What is the value of days.length for the following array?

```
String[] days = {"Monday", "Tuesday", "Wednesday", "Thursday", "Friday", "Saturday"}
```

Selected Answer:  c.

6

Answers: a.

3

b.

5

c.

6

d.

7

### • Question 31

1 out of 1 points

What is the purpose of the main method?

Selected Answer:  a.

To act as the entry point for the program.

Answers:  a.

To act as the entry point for the program.

b.

To create buttons and scrollbars.

c.

To build a user interface.

d.

To hold the APIs of the application.

Created by Parin

### • Question 32

0 out of 1 points

What results from running the following code?

```
public static void main(String args[]){
 StringBuilder s = new StringBuilder("Hello");
 if(s.append(" 1").equals("False") && s.append("2").equals("Hello 12")
 System.out.println("value is " + s);
 }else {
 System.out.println("value is " + s);
 }
}
```

Selected Answer:  c.

nothing prints

Answers:

a.

value is Hello 12

b.

value is Hello

c.

nothing prints

 d.

value is Hello 1

### • Question 33

0 out of 1 points

What is wrong with the Java class declaration below, with regard to coding conventions?

```
public class tuna_fish{}
```

Selected Answer:  c.

Class identifiers in Java should start with an upper case letter.

Answers:

a.

Class identifiers in Java should use mixed case instead of underscores.

b.

Both of other options

c.

Class identifiers in Java should start with an upper case letter.

- 

- **Question 5**

4 out of 4 points

What's printed when the following program is executed:

```
public class WhatsPrinted{
 public void doIt(int achar){
 System.out.println(achar + achar);
 }
 public static void main(String args[]){
 new WhatsPrinted().doIt('B');
 }
}
```

Selected Answer:  c.

132 (The ASCII value of B is 42hex)

Answers:

a.

B

b.

BB

c.

132 (The ASCII value of B is 42hex)

d.

Does not compile

## • Question 6

4 out of 4 points

Whats is MVC?

Selected Answer:  c.

Answer:

Decouples logic from data and presentation by separating logic types into individual classes

Answers:

a.

programmers did not have anything better to do so they made up yet another pattern

b.

this pattern divides all the code in 3 exact portions to be run from different java files. instead of one big file.

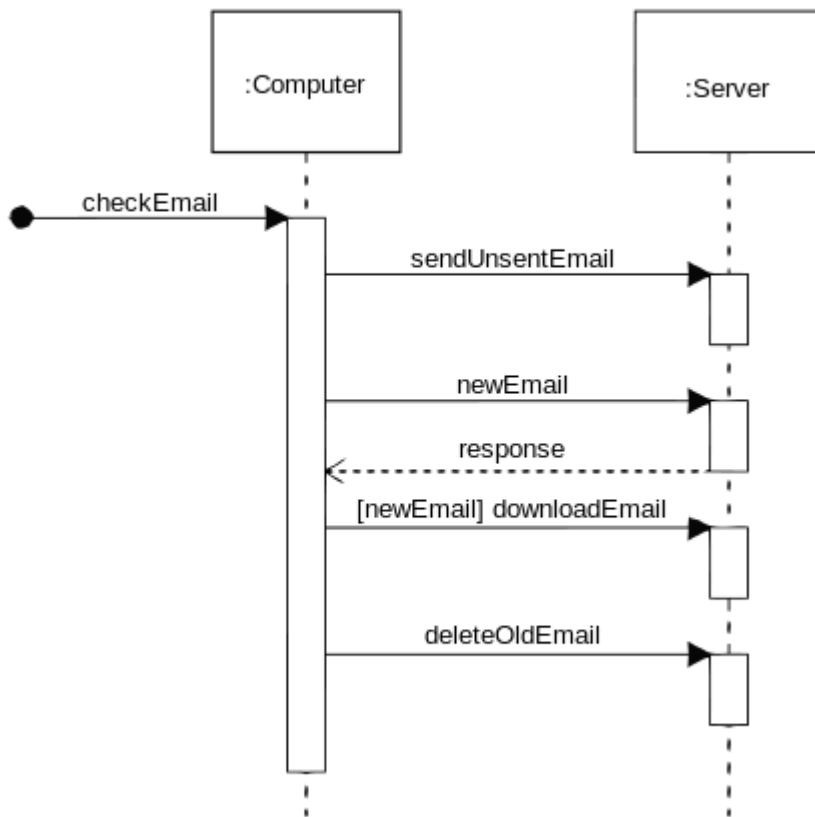

✔ c.

Decouples logic from data and presentation by separating logic types into individual classes

### • Question 7

4 out of 4 points

What is this UML Diagram?

Selected Answer: ✔ b.

- Answers:
- Sequence Diagram
  - a.
  - State Diagram
  - b.
  - Sequence Diagram
  - c.
  - Use Case
  - d.
  - Class Diagram

• **Question 8**

0 out of 4 points

Which one of the JUnit methods below is best used for comparing two double values?

Selected Answer:  a.

`assertEquals(String message, double expected, double actual)`

Answers: a.

`assertEquals(String message, double expected, double actual)`

b.

`assertTrue(String message, (expected == actual) )`

c.

`assertEquals(String message, double expected, double actual, double delta)`

• **Question 9**

4 out of 4 points

Match JavaFX layout to its description?

•

| Question     | Correct Match                                                                                                                                                                                | Selected Match                                                                                                                                                                               |

Nodes can <u>flow</u> vertically (in columns) or horizontally (in rows) |

•

### All Answer Choices

A.

This layout pane provides five regions in which to place nodes: top, bottom, left, right, and center

B.

This layout pane provides an easy way for arranging a series of nodes in a single row

C.

This layout pane is similar to the another layout pane, except that the nodes are arranged in a single column

D.

This layout pane enables you to create a flexible grid of rows and columns in which to lay out nodes

E.

The nodes within a this layout pane are laid out consecutively and wrap at the boundary set for the pane. Nodes can flow vertically (in columns) or horizontally (in rows)

Which of the following is not a valid comment in the Java programming language?

Selected Answer:  d.

```
<!-- A comment -->
int x;
```

Answers: a.

```
int x; // a comment
```

b.

```
/* A comment */
int x;
```

c.

```
/** A comment */
int x;
```

d.

```
<!-- A comment -->
int x;
```

• **Question 33**

1 out of 1 points

What is wrong with the Java class declaration below, with regard to coding conventions?

```
public class tuna_fish{}
```

Selected Answer:  c.

Both of other options

Answers:

a.

Class identifiers in Java should start with an upper case letter.

b.

Class identifiers in Java should use mixed case instead of underscores.

c.

Both of other options

Which method is called internally by Thread start() method?

- A. execute()
- B. **run()**
- C. launch()
- D. main()

What is maximum thread priority in Java ?

- A. **10**
- B. 12
- C. 5
- D. 8

Where an object of a class get stored?

- A. **Heap**
- B. Stack
- C. Disk
- D. File

Unchecked exception caught at

- A. compile time
- B. **run time**
- C. Both at compile and run time
- D. None

• 0 out of 4 points

Which one of the JUnit methods below is best used for comparing two double values?

Selected  b.

Answer:

assertEquals(String message, double expected, double actual)

Answers:

a.

assertTrue(String message, (expected == actual) )

b.

assertEquals(String message, double expected, double actual)

 c.

assertEquals(String message, double expected, double actual, double delta)

### • Question 5

0 out of 4 points

which statement is true?

```
public class SingleThing {
 private static final SingleThing thing = new SingleThing();
 private SingleThing() {}
 public static SingleThing instance() {
 return thing;
 }
}
```

Selected  c.

Answer:

this singleton has lazy initialization. object is created when calling instance()

Answers:

a.

there was not enough hints in this question, i will complain about it after midterm.

 b.

this singleton has eager initialization. object is created at class loading time.

c.

this singleton has lazy initialization. object is created when calling instance()

d.

singleton object can never have an instance, it is by design only static

### • Question 6

4 out of 4 points

In the Model View Controller Design Pattern what component typically takes on the role of storing the data?

Selected  a.

Answer:

Model

Answers:  a.

Model

b.

Controller

c.

never in MVC, in a XML file, DataBase and/or appropriate data structure

d.

View

### • Question 7

4 out of 4 points

what is true about get/set pattern?

Selected  a.

Answer:

provides the functionality for retrieving and updating attribute values with no other functionality

Answers:  a.

provides the functionality for retrieving and updating attribute values with no other functionality

b.

provides a beautiful and fashionable design which programmers cannot live without

c.

this pattern is only used in conjunction with MVC

d.

when using this pattern all methods must start with set or get with no exceptions

### • Question 8

4 out of 4 points

The code sample below is for a Singleton design pattern. What is wrong?

```
public class SingleThing {

 public SingleThing() {
 }

 public static SingleThing instance() {
 return new SingleThing();
 }
}
```

Selected Answer:  d.

All of the above

Answers:

a.

The method instance() should not make new SingleThing objects

b.

The constructor is marked public, it needs to be private

c.

there is no static variable to hold the reference for SingleThing

d.

All of the above

## • Question 9

4 out of 4 points

The following code is an example of using the \_\_\_\_\_ design pattern.

```
Person p = PersonBuilder.create().firstName("First").lastName("Last")
.personId(1).phone("123 123 1234").email("a@b.com").build()
```

Selected Answer:  a.

Fluent (Builder)

Answers:

a.

Fluent (Builder)

b.

Delegate

c.

Singleton

d.

MVC

1 points

Question 5

1. Assume that the class `AcLis` implements the `ActionListener` interface. The code fragment below constructs a button and gives it four action listeners. When the button is pressed, which action listener is the first to get its `actionPerformed()` method invoked?

1. `Button btn = new Button("Hello");`

2. `AcLis a1 = new AcLis();`

3. `AcLis a2 = new AcLis();`

4. `AcLis a3 = new AcLis();`

5. `AcLis a4 = new AcLis();`

6. `btn.addActionListener(a1);`

7. `btn.addActionListener(a2);`

8. `btn.addActionListener(a3);`

9. `btn.addActionListener(a4);`

10. `btn.removeActionListener(a2);`

11. `btn.removeActionListener(a3);`

12. `btn.addActionListener(a3);`

13. `btn.addActionListener(a2);`

a1 gets its `actionPerformed()` method invoked first.

a2 gets its `actionPerformed()` method invoked first.

a3 gets its `actionPerformed()` method invoked first.

a4 gets its `actionPerformed()` method invoked first.

It is impossible to know which listener will be first.

Question 8

1. When you want to listen for an event, you can  
implement an appropriate \_\_\_\_\_ for your class.

handler.

Created by Parin

listener.

abstract class.

superclass.

1 points

Question 9

1. The catch block that begins catch (Exception ex) can catch Exceptions of type.

IOException

ArithmeticException

both of these

neither of these

1 points

Question 10

1. Which of the following statements about JPanels is false.

A JPanel is a JComponent.

A JPanel is a Container.

A JPanel does not have a content pane.

A JPanel has a fixed size.

1 points

Created by Parin

#### Question 11

1. We can derive many of the operations of each class by examining the key \_\_\_\_\_ and \_\_\_\_\_ in the requirements documents.

verbs, verb phrases.

nouns, noun phrases.

objectives, objective phrases.

Both a and b.

1 points

#### Question 12

1. Java data types are the same as the data types used in the database.

True

False

1 points

#### Question 13

1. Using the protected keyword gives a member.

Created by Parin

public access.

package access.

private access.

block scope.

1 points

Question 14

1. SQL statements that are stored in a database can be invoked using an object that implements interface

\_\_\_\_\_.

Callable.

StoredStatement.

CallableStatement.

Connection.

1 points

Question 15

1. Which JFrame constant indicates that the program should terminate when the window is closed by the user.

TERMINATE\_ON\_CLOSE.

IMMEDIATELY\_CLOSE.

EXIT\_ON\_CLOSE.

All of the above.

Created by Parin

1 points

#### Question 16

1. You have been given a design document for a veterinary registration system for implementation in Java technology. It states: "A pet has an owner, a registration date, and a vaccination-due date. A cat is a pet that has a flag indicating if it has been neutered, and a textual description of its markings." Given that the Pet class has already been defined, which of the following fields would be appropriate for inclusion in the Cat class as members.

Pet thePet;

Date registered;

Date vaccinationDue;

Cat theCat;

boolean neutered;

1 points

#### Question 17

1. Which of the following statements about anonymous inner classes is false?

They are declared without a name.

Created by Parin

They typically appear inside a method declaration.

They are declared with the anonymous keyword.

They can access their top-level class's members.

1 points

Question 18

1. Declaring a method final means.

it will prepare the object for garbage collection.

it cannot be accessed from outside its class.

it cannot be overloaded.

it cannot be overridden.

1 points

Question 19

1. Which statement is false.

A generic class can be derived from a non-generic class.

A non-generic class cannot be derived from a generic class.

A generic class can be derived from another generic class.

A generic method in a subclass can override a generic method in a superclass if both methods have the same signatures.

1 points

Question 20

Created by Parin

1. In java, String concatenation is done using

\_\_\_\_\_.

String1.concat(String2).

String1 + (String2) .

String1 & (String2) .

Either a or b will perform String concatenation.

Any of the above will perform String concatenation.

1 points

Question 21

1. In the UML, public visibility is indicated by placing a

\_\_\_\_\_ before an operation or an attribute, whereas a

\_\_\_\_\_ indicates private visibility.

letter p, letter n.

letter n, letter p.

plus sign (+), minus sign (-).

minus sign (-), plus sign (+).

1 points

Question 22

1. String literals in java, such as, "John Q. Doe".

Created by Parin

Are also known as anonymous String objects.

Are not stored, but replaced at compile time.

Are not String objects. They are only data.

None of the above are true.

1 points

Question 23

1. The BorderLayout manager will divide the screen into a maximum of \_\_\_\_\_.

2 components

4 components

6 components

none of the above

1 points

Question 24

1. All of the following methods are implicitly final except.

a method in an abstract class.

a private method.

a method declared in a final class.

static method.

Created by Parin

1 points

Question 25

1. How many bytes does the following code write to file destfile?

```
1. try {
2. FileOutputStream fos = new
FileOutputStream("destfile");
3. DataOutputStream dos = new
DataOutputStream(fos);
4. dos.writeInt(3);
5. dos.writeDouble(0.0001);
6. dos.close();
7. fos.close();
8. }
9. catch (IOException e) { }
```

2

8

12

16

1 points

Question 26

1. You can get a list of the methods through which an Exception has traveled by using the method.

Created by Parin

getHistory().

callStack().

getPath().

printStackTrace().

1 points

Question 27

1. Which statement is false?

A generic method may be overloaded.

A class can provide two or more generic methods that specify the same method name but different method parameters.

A generic method cannot be overloaded by nongeneric methods.

When the compiler encounters a method call, it searches for the method declaration that most precisely matches the method name and the argument types specified in the call.

1 points

Question 28

1. The Data Access Object pattern (DAO)

\_\_\_\_\_.

helps with the design of GUI programs.

abstracts the database access logic out of a domain class.

Created by Parin

is a Gang of Four pattern.

is a simple way of creating a data access component.

1 points

Question 29

1. A JSlider does not use a model.

True

False

1 points

Question 30

1. When a superclass variable refers to a subclass object and a method is called on that object, the proper implementation is determined at execution time. What is the process of determining the correct method to call?

early binding.

non-binding.

on-time binding.

late binding.

1 points

Question 31

Created by Parin

1. The UML represents operations by listing the operation name, followed by a \_\_\_\_\_-separated list of parameters in parentheses, a \_\_\_\_\_ and the return type.

colon, semicolon.

colon, colon.

comma, colon.

comma, semicolon.

1 points

Question 32

1. Consider the classes below, declared in the same file:

```
class A {
 int a;
 public A() {
 a = 7;

 }
}

class B extends A {
 int b;
 public B() {
 b = 8;

 }
}
```

Created by Parin

}

Both variables a and b are instance variables.

After the constructor for class B executes, the variable a will have the value 7.

After the constructor for class B executes, the variable b will have the value 8.

A reference of type A can be treated as a reference of type B.

1 points

Question 33

1. The two key tasks required to process an event are.

Add ActionListener and ActionEvent to the program.

Register an event listener and implement an event handler.

Create an inheritance hierarchy and implement polymorphism.

Create two different ButtonHandler classes.

None of the above.

1 points

Question 34

1. You can simulate atomicity by ensuring that \_\_\_\_\_.

at least one thread carries out its operations on an object at a time.

two threads carry out their operations on an object in parallel.

only one thread carries out its operations on an object at a time.

Created by Parin

None of the above.

1 points

Question 35

1. Overriding a method differs from overloading a method because.

Overloaded methods have the same signature.

Overridden methods have the same signature.

Both of the above.

Neither of the above.

1 points

Question 36

1. Assigning a subclass reference to a superclass variable is safe.

because the subclass object has an object of its superclass.

because the subclass object is an object of its superclass.

only when the superclass is abstract.

only when the superclass is concrete.

1 points

Question 37

Created by Parin

1. An advantage of inheritance is that:

All methods can be inherited.

All instance variables can be uniformly accessed by subclasses and superclasses.

Objects of a subclass can be treated like objects of their superclass.

None of the above.

1 points

Question 38

1. Which of the following statements about interfaces is

false.

An interface describes a set of methods that can be called on an object, providing a default implementation for the methods.

An interface describes a set of methods that can be called on an object, not providing concrete implementation for the methods.

Interfaces are useful when attempting to assign common functionality to possibly unrelated classes.

Once a class implements an interface, all objects of that class have an is-a relationship with the interface type.

1 points

Question 39

Created by Parin

1. Which statement is false.

A ListIterator accesses the elements of a List.

**Class ArrayList is a fixed-size array.**

A LinkedList is a linked list implementation of a List.

ArrayLists execute faster than Vectors because they are not thread safe.

1 points

Question 40

1. The classes and interfaces which comprise the collections framework are members of package

\_\_\_\_\_.

**java.util.**

javax.swing.

java.collections.

java.collection.

1 points

Question 41

1. Java applications and Java applets are similar because both \_\_\_\_\_.

**are compiled using the javac command**

are executed using the java command

are executed from within an HTML document

have a main() method

1 points

Question 42

1. Which of the following statements for a JTextField is false.

Can be used to display uneditable text.

Can be used to display editable text.

Enables users to enter data from the keyboard.

Displays a list of fields.

1 points

Question 43

1. In a PreparedStatement, parameters are counted from position \_\_\_\_\_.

0.

1.

2.

3.

1 points

Question 44

1. From which object do you ask for MetaData describing

Created by Parin

columns after you execute a prepared statement.

Connection.

**ResultSet.**

DriverManager.

Driver.

1 points

Question 45

1. Consider the abstract superclass below:

```
public abstract class Foo { private int
a; public int b; public Foo(int aVal, int
bVal) { a = aVal; b = bVal; } // end
Foo constructor public abstract int
calculate(); } // end class Foo
```

Any concrete subclass that extends class Foo:

Must implement a method called calculate.

Will not be able to access the instance variable a.

**Both (a) and (b).**

Neither (a) nor (b).

1 points

Question 46

1. PreparedStatement method \_\_\_\_\_ returns a

Created by Parin

ResultSet.

executeUpdate.

executeQuery.

execute.

None of the above.

1 points

Question 47

1. Which one statement below most accurately describes the following code listing?

1. class CustomException extends EOFException { }

2.

3. class Parent {

4. void doSomething() throws CustomException {

5. throw new CustomException ();

6. }

7. }

8.

9. class Kid extends Parent {

10. void doSomething() throws EOFException {

11. throw new EOFException ();

12. }

13. }

Compiler error at line 4.

Compiler error at line 5.

Compiler error at line 10.

Created by Parin

Compiles without error.

1 points

Question 48

1. Accessing a superclass method through a subclass reference is

A syntax error.

Straightforward

Inheritance.

Polymorphism.

1 points

Question 49

1. ActionEvent is an interface in java.awt.event

True.

False.

1 points

Question 50

1. In UML diagrams, abstract methods are

\_\_\_\_\_.

Created by Parin

displayed in italics.

displayed in bold.

not shown, as they have yet to be implemented.

displayed, but without the parentheses following the method name.

1 points

Question 51

1. Which of the following is the superclass constructor call syntax?

keyword super, followed by a dot (.).

keyword super, followed by a set of parentheses containing the superclass constructor arguments.

keyword super, followed by a dot and the superclass constructor name.

None of the above.

1 points

Question 52

1. Which of the following declarations are illegal.

transient int i = 41;

public final static native int w();

final static double d;

1 points

Created by Parin

Question 53

1. What is the base case for the recursive merge sort algorithm.

Any array that is already sorted.

A two-element array.

A one-element array.

A zero-element array.

1 points

Question 54

1. For which of the following would polymorphism not provide a clean solution.

A billing program where there is a variety of client types that are billed with different fee structures.

A maintenance log program where data for a variety of types of machines is collected and maintenance schedules are produced for each machine based on the data collected.

A program to compute a 5% savings account interest for a variety of clients.

An IRS program that maintains information on a variety of taxpayers and determines who to audit based on criteria for classes of taxpayers.

1 points

Question 55

Created by Parin

1. Which statement is false.

When declaring a generic method, the type parameter section is placed before the return type of the method.

Each type parameter section contains only one type parameter.

A type parameter is an identifier that specifies a generic type name.

Type parameters can represent only reference types.

1 points

Question 56

1. Refactoring refers to \_\_\_\_\_.

the separation of presentation logic from domain logic.

a process of refining a design to make it more flexible, expandable, and reusable

adding functionality to a design

the use of the Java TM Reflection API

1 points

Question 57

1. A typical Servlet follows the \_\_\_\_\_,  
\_\_\_\_\_ model when communicating  
with a client.

Request, Response.

Model, View.

Created by Parin

HTML, HTTP.

Request, dispatch.

None of the above.

1 points

Question 58

1. The == operator with the String class returns a true value if \_\_\_\_\_.

lengths are unequal or the characters do not match if lengths are equal

lengths are equal and the characters match exactly

lengths are equal and the characters match except for case

lengths are equal and the characters do not match

**none of the above**

1 points

Question 59

1. Java performs automatic \_\_\_\_\_ of objects that are no longer referenced in a program.

memory distribution.

**garbage collection.**

storage compression.

trash aggregation.

Created by Parin

1 points

Question 60

1. A catch block is executed.

after all of the statements in a try block have been executed

if a method executed in the try block throws any exception

if a method executed in the try block throws the exception that is specified (in brackets) after the catch keyword

both a and c are true

1 points

Question 61

1. A(n) \_\_\_\_\_ allows a program to walk through the collection and remove elements from the collection.

Set.

Queue.

Iterator.

List.

1 points

Question 62

1. In lab 4 you implemented what design pattern with the queue implementation.

Created by Parin

Model-view-controller.

Singleton.

Builder.

Adapter.

1 points

Question 63

1. Classes and methods are declared final for all but the following reasons.

final methods allow inlining the code.

final methods and classes prevent further inheritance.

final methods are static.

final methods can improve performance.

1 points

Question 64

1. The code below draws a line. What color is the line?

1. `g.setColor(Color.red.green.yellow.red.black);`

2. `g.drawLine(0, 0, 100, 100);`

Red

Black

Green

Yellow

Created by Parin

1 points

Question 65

1. Which statement best describes the relationship between superclass and subclass types.

A subclass reference cannot be assigned to a superclass variable and a superclass reference cannot be assigned to a subclass variable.

A subclass reference can be assigned to a superclass variable and a superclass reference can be assigned to a subclass variable.

A superclass reference can be assigned to a subclass variable, but a subclass reference cannot be assigned to a superclass variable.

A subclass reference can be assigned to a superclass variable, but a superclass reference cannot be assigned to a subclass variable.

1 points

Question 66

1. It is a UML convention to denote the name of an abstract class in \_\_\_\_\_.

bold.

italics.

a diamond.

there is no convention of the UML to denote abstract classes—they are listed just as any other class.

Created by Parin

1 points

Question 67

1. Suppose Stack is a generic class that has one type parameter. The following assignment `Stack< Integer > integerStack = new Stack( 10 );` is \_\_\_\_\_.

illegal.

permitted and safe.

permitted but unsafe, the compiler issues a warning message.

permitted but unsafe, the runtime environment issues a warning message.

1 points

Question 68

1. Which method changes the text the label displays.

changeText.

setText.

changeLabel.

setLabel.

1 points

Question 69

Created by Parin

1. Recursion can be less efficient than iteration because.

it can cause an explosion of method calls.

it is not as intuitive.

recursive methods are harder to debug.

recursive methods take longer to program.

1 points

Question 70

1. Servlet get input from a client (browser) using an HTML form. The servlet accesses the form fields using \_\_\_\_\_.

the ServletResponse object method `getParameter()`.

the ServletRequest object method `getParameter()`.

the ServletRequest object method `getFormField()`.

None of the above.

1 points

Question 71

1. Which of the following statements about abstract superclasses is true.

abstract superclasses may contain data.

Abstract superclasses may not contain implementations of methods.

Created by Parin

abstract superclasses must declare all methods as abstract.

abstract superclasses must declare all data members not given values as abstract.

1 points

Question 72

1. The UML specifies a relationship called a(n) to model inheritance.

inheritization.

specialization.

generalization.

All of the above.

1 points

Question 73

1. One generic Stack class could be the basis for creating many Stack classes, e.g., Stack, Stack and Stack. These classes are known as \_\_\_\_\_.

subclasses.

generic subclasses.

concrete classes.

parameterized classes.

1 points

Created by Parin

Question 74

1. An interface may contain.

private static data and public abstract methods.

only public abstract methods.

public static final data and public abstract methods.

private static data and public final methods.

1 points

Question 75

1. Using layout managers \_\_\_\_\_.

provides the greatest level of control over a GUI's appearance.

can be faster than creating a GUI with absolute positioning.

allows the programmer to specify the exact location of each GUI component with respect to the upperleft corner of the Container.

allows the programmer to specify the exact location of each GUI component with respect to the lowerleft corner of the Container.

1 points

Question 76

1. True or False: A protected method may not be overridden by a public method.

Created by Parin

True

False

1 points

Question 77

1. Which of the following sorting algorithms is the fastest.

Selection sort.

Insertion sort.

Merge sort.

They all run at roughly the same speed.

1 points

Question 78

1. Which of the following is not possible.

A class that implements two interfaces.

A class that inherits from two classes.

A class that inherits from one class, and implements an interface.

All of the above are possible.

1 points

Question 79

Created by Parin

1. Consider classes A, B and C, where A is an abstract superclass, B is a concrete class that inherits from A and C is a concrete class that inherits from B. Class A declares abstract method originalMethod, implemented in class B. Which of the following statements is true of class C.

Method originalMethod cannot be overridden in class C—once it has been implemented in concrete class B, it is implicitly final.

Method originalMethod must be overridden in class C, or a syntax error will occur.

If method originalMethod is not overridden in class C but is called by an object of class C, an error occurs.

None of the above.

1 points

Question 80

1. Which one of the following will not get the data from the first column of ResultSet rs, returned from executing the following SQL statement: SELECT name, rank, serialNo FROM employee.

rs.getString(0);

rs.getString("name");

rs.getString(1);

None of the above

## Answer is before questions:

c

1. What pattern does the Java event model resemble.

- a) Model-View-Controller
- b) Simple Factory
- c) Observer
- d) None of the above

b

1. Which of the following statements about adapters is false.

- a) An adapter class implements an interface.
- b) An adapter class provides a default (empty) implementation of every method in the interface.
- c) Programmers override selected adapter methods.
- d) A ComponentListener is a ComponentAdaptor.

c

- 1. class Q6 {
- 2. public static void main(String args[]) {
- 3. Holder h = new Holder();
- 4. h.held = 100;
- 5. h.bump(h);
- 6. System.out.println(h.held);
- 7. }
- 8. }
- 9.
- 10. class Holder {
- 11. public int held;
- 12. public void bump(Holder theHolder) { theHolder.held++; }
- 13. }

What value is printed out at line 6?

- a) 0
- b) 1
- c) 101
- d) 100

c

Which of the following does not generate GUI events.

- a) Typing in a text field.
- b) Selecting an item from a menu.
- c) Viewing the text in a label.
- d) Moving the mouse.

e

Assume that the class AcLis implements the ActionListener interface. The code fragment below constructs a button and gives it four action listeners. When the button is pressed, which action listener is the first to get its actionPerformed() method invoked?

```
Button btn = new Button("Hello");
```

Created by Parin

```
2. AcLis a1 = new AcLis();
3. AcLis a2 = new AcLis();
4. AcLis a3 = new AcLis();
5. AcLis a4 = new AcLis();
6. btn.addActionListener(a1);
7. btn.addActionListener(a2);
8. btn.addActionListener(a3);
9. btn.addActionListener(a4);
10. btn.removeActionListener(a2);
11. btn.removeActionListener(a3);
12. btn.addActionListener(a3);
13. btn.addActionListener(a2);
```

- a) a1 gets its actionPerformed() method invoked first.
- b) a2 gets its actionPerformed() method invoked first.
- c) a3 gets its actionPerformed() method invoked first.
- d) a4 gets its actionPerformed() method invoked first.
- e) It is impossible to know which listener will be first.

b

1. You cannot access a database using a servlet.

- a) True
- b) False

c

A typical servlet would output \_\_\_\_\_.

- a) XML.
- b) XSL.
- c) HTML.
- d) none of these. 1

b

When you want to listen for an event, you can implement an appropriate \_\_\_\_\_ for your class.

- a) handler.
- b) listener.
- c) abstract class.
- d) superclass.

c

The catch block that begins catch (Exception ex) can catch Exceptions of type.

- a) IOException
- b) ArithmeticException
- c) both of these
- d) neither of these

d

Which of the following statements about JPanels is false.

- a) A JPanel is a JComponent.
- b) A JPanel is a Container.

c) A JPanel does not have a content pane.

d) A JPanel has a fixed size.

a

We can derive many of the operations of each class by examining the key \_\_\_\_\_ and \_\_\_\_\_ in the requirements documents.

a) verbs, verb phrases.

b) nouns, noun phrases.

c) objectives, objective phrases.

d) Both a and b.

b

Java data types are the same as the data types used in the database.

a) True

b) False

b

Using the protected keyword gives a member.

a) public access.

b) package access.

c) private access.

d) block scope.

c

SQL statements that are stored in a database can be invoked using an object that implements interface \_\_\_\_\_.

a) Callable.

b) StoredStatement.

c) CallableStatement.

d) Connection.

c

Which JFrame constant indicates that the program should terminate when the window is closed by the user.

a) TERMINATE\_ON\_CLOSE.

b) IMMEDIATELY\_CLOSE.

c) EXIT\_ON\_CLOSE.

d) All of the above. 1

e

You have been given a design document for a veterinary registration system for implementation in Java technology. It states: "A pet has an owner, a registration date, and a vaccination-due date.

A cat is a pet that has a flag indicating if it has been neutered, and a textual description of its markings." Given that the Pet class has already been defined, which of the following fields

would be appropriate for inclusion in the Cat class as members.

a) Pet thePet;

b) Date registered;

c) Date vaccinationDue;

d) Cat theCat;

e) boolean neutered;

c

Which of the following statements about anonymous inner classes is false?

- a) They are declared without a name.
- b) They typically appear inside a method declaration.
- c) They are declared with the anonymous keyword.
- d) They can access their top-level class's members.

d

Declaring a method final means.

- a) it will prepare the object for garbage collection.
- b) it cannot be accessed from outside its class.
- c) it cannot be overloaded.
- d) it cannot be overridden.

B

Which statement is false.

- a) A generic class can be derived from a non-generic class.
- b) A non-generic class cannot be derived from a generic class.
- c) A generic class can be derived from another generic class.
- d) A generic method in a subclass can override a generic method in a superclass if both methods have the same signatures.

d

In java, String concatenation is done using \_\_\_\_\_.

- a) String1.concat(String2).
- b) String1 + (String2) .
- c) String1 & (String2) .
- d) Either a or b will perform String concatenation.
- e) Any of the above will perform String concatenation.

c

In the UML, public visibility is indicated by placing a \_\_\_\_\_ before an operation or an attribute, whereas a \_\_\_\_\_ indicates private visibility.

- a) letter p, letter n.
- b) letter n, letter p.
- c) plus sign (+), minus sign (-).
- d) minus sign (-), plus sign (+).

a

String literals in java, such as, "John Q. Doe".

- a) Are also known as anonymous String objects.
- b) Are not stored, but replaced at compile time.
- Are not String objects. They are only data.

None of the above are true. 1

D

The BorderLayout manager will divide the screen into a maximum of \_\_\_\_\_.

- a) 2 components
- b) 4 components
- c) 6 components
- d) none of the above

a

All of the following methods are implicitly final except.

- a) a method in an abstract class.
- b) a private method.
- c) a method declared in a final class.
- d) static method.

c

How many bytes does the following code write to file destfile? 1. try { 2. FileOutputStream fos = new FileOutputStream("destfile"); 3. DataOutputStream dos = new DataOutputStream(fos); 4. dos.writeInt(3); 5. dos.writeDouble(0.0001); 6. dos.close(); 7. fos.close(); 8. } 9. catch (IOException e) { }

- a) 2
- b) 8
- c) 12
- d) 16

d

You can get a list of the methods through which an Exception has traveled by using the method.

- a) getHistory().
- b) callStack().
- c) getPath().
- d) printStackTrace().

d

Which statement is false?

- a) A generic method may be overloaded.
- b) A class can provide two or more generic methods that specify the same method name but different method parameters.
- c) A generic method cannot be overloaded by nongeneric methods.
- d) When the compiler encounters a method call, it searches for the method declaration that most precisely matches the method name and the argument types specified in the call.

b

The Data Access Object pattern (DAO) \_\_\_\_\_.

- a) helps with the design of GUI programs.
- b) abstracts the database access logic out of a domain class.
- c) is a Gang of Four pattern.
- d) is a simple way of creating a data access component

b

A JSlider does not use a model.

- a) True
- b) False

d

When a superclass variable refers to a subclass object and a method is called on that object, the proper implementation is determined at execution time. What is the process of determining the correct method to call?

- a) early binding.
- b) non-binding.
- c) on-time binding.
- d) late binding.

c

The UML represents operations by listing the operation name, followed by a \_\_\_\_\_ - separated list of parameters in parentheses, a \_\_\_\_\_ and the return type.

- a) colon, semicolon.
- b) colon, colon.
- c) comma, colon.
- d) comma, semicolon.

d

Consider the classes below, declared in the same file: `class A { int a; public A() { a = 7; } }` `class B extends A { int b; public B() { b = 8; } }`

- a) Both variables a and b are instance variables.
- b) After the constructor for class B executes, the variable a will have the value 7.
- c) After the constructor for class B executes, the variable b will have the value 8.
- d) A reference of type A can be treated as a reference of type B.

b

.The two key tasks required to process an event are.

- a) Add ActionListener and ActionEvent to the program.
- b) Register an event listener and implement an event handler.
- c) Create an inheritance hierarchy and implement polymorphism.
- d) Create two different ButtonHandler classes.
- e) None of the above. 1

c

You can simulate atomicity by ensuring that \_\_\_\_\_.

- a) at least one thread carries out its operations on an object at a time.
- b) two threads carry out their operations on an object in parallel.
- c) only one thread carries out its operations on an object at a time.
- d) None of the above.

b

Overriding a method differs from overloading a method because.

- a) Overloaded methods have the same signature.
- b) Overridden methods have the same signature.
- c) Both of the above.
- d) Neither of the above.

b

Assigning a subclass reference to a superclass variable is safe.

- a) because the subclass object has an object of its superclass.
- b) because the subclass object is an object of its superclass.
- c) only when the superclass is abstract.
- d) only when the superclass is concrete.

c

An advantage of inheritance is that:

- a) All methods can be inherited.
- b) All instance variables can be uniformly accessed by subclasses and superclasses.
- c) Objects of a subclass can be treated like objects of their superclass.
- d) None of the above.

a

Which of the following statements about interfaces is false.

- a) An interface describes a set of methods that can be called on an object, providing a default implementation for the methods.
- b) An interface describes a set of methods that can be called on an object, not providing concrete implementation for the methods.
- b) Interfaces are useful when attempting to assign common functionality to possibly unrelated classes.
- c) Once a class implements an interface, all objects of that class have an is-a relationship with the interface type

b

Which statement is false.

- a) A ListIterator accesses the elements of a List.
- b) Class ArrayList is a fixed-size array.
- c) A LinkedList is a linked list implementation of a List.
- d) ArrayLists execute faster than Vectors because they are not thread safe.

a

The classes and interfaces which comprise the collections framework are members of package \_\_\_\_\_.

- a) java.util.
- b) javax.swing.
- c) java.collections.
- d) java.collection.

a

Java applications and Java applets are similar because both \_\_\_\_\_.

- a) are compiled using the javac command
- b) are executed using the java command
- c) are executed from within an HTML document
- d) have a main() method

d

Which of the following statements for a JTextField is false.

- a) Can be used to display uneditable text.
- b) Can be used to display editable text.
- c) Enables users to enter data from the keyboard.
- d) Displays a list of fields.

b

In a PreparedStatement, parameters are counted from position \_\_\_\_\_.

- a) 0.
- b) 1.
- c) 2.
- d) 3.

b

From which object do you ask for Metadata describing columns after you execute a prepared statement.

- a) Connection.
- b) ResultSet.

c) DriverManager.

d) Driver.

c

Consider the abstract superclass below: `public abstract class Foo { private int a; public int b; public Foo( int aVal, int bVal ) { a = aVal; b = bVal; } // end Foo constructor public abstract int calculate(); } // end class Foo` Any concrete subclass that extends class Foo:

a) Must implement a method called calculate.

b) Will not be able to access the instance variable a.

c) Both (a) and (b).

d) Neither (a) nor (b). 1

b

PreparedStatement method \_\_\_\_\_ returns a ResultSet.

a) executeUpdate.

b) executeQuery.

c) execute.

d) None of the above.

c

Which one statement below most accurately describes the following code listing?

1. `class CustomException extends EOFException { }`

2.

3. `class Parent {`

4. `void doSomething() throws CustomException {`

5. `throw new CustomException ();`

6. `}`

7. `}`

8.

9. `class Kid extends Parent {`

10. `void doSomething() throws EOFException {`

11. `throw new EOFException ();`

12. `}`

13. `}`

a) Compiler error at line 4.

b) Compiler error at line 5.

c) Compiler error at line 10.

d) Compiles without error.

a

Accessing a superclass method through a subclass reference is

a) A syntax error.

b) Straightforward

c) Inheritance.

d) Polymorphism.

b

ActionEvent is an interface in `java.awt.event`

a) True.

b) False.

a

In UML diagrams, abstract methods are \_\_\_\_\_.

- a) displayed in italics.
- b) displayed in bold.
- c) not shown, as they have yet to be implemented.
- d) displayed, but without the parentheses following the method name.

b

Which of the following is the superclass constructor call syntax?

- a) keyword super, followed by a dot (.).
- b) keyword super, followed by a set of parentheses containing the superclass constructor arguments.
- c) keyword super, followed by a dot and the superclass constructor name.
- d) None of the above.

ba

Which of the following declarations are illegal.

- a) transient int i = 41;
- b) public final static native int w();
- c) final static double d;

a

What is the base case for the recursive merge sort algorithm.

- a) Any array that is already sorted.
- b) A two-element array.
- c) A one-element array.
- d) A zero-element array.

c

For which of the following would polymorphism not provide a clean solution.

- a) A billing program where there is a variety of client types that are billed with different fee structures.
- b) A maintenance log program where data for a variety of types of machines is collected and maintenance schedules are produced for each machine based on the data collected.
- c) A program to compute a 5% savings account interest for a variety of clients.
- d) An IRS program that maintains information on a variety of taxpayers and determines who to audit based on criteria for classes of taxpayers.

b

Which statement is false.

- a) When declaring a generic method, the type parameter section is placed before the return type of the method.
- b) Each type parameter section contains only one type parameter.
- c) A type parameter is an identifier that specifies a generic type name.
- d) Type parameters can represent only reference types

b

Refactoring refers to \_\_\_\_\_.

- a) the separation of presentation logic from domain logic.
- b) a process of refining a design to make it more flexible, expandable, and reusable
- c) adding functionality to a design
- d) the use of the Java <sup>TM</sup> Reflection API

a

A typical Servlet follows the \_\_\_\_\_, \_\_\_\_\_ model when communicating with a client.

- a) Request, Response.
- b) Model, View.
- c) HTML, HTTP.
- d) Request, dispatch.
- e) None of the above.

e

the == operator with the String class returns a true value if \_\_\_\_\_.

- a) lengths are unequal or the characters do not match if b) lengths are equal
- b) lengths are equal and the characters match exactly
- c) lengths are equal and the characters match except for case
- d) lengths are equal and the characters do not match
- e) none of the above

b

Java performs automatic \_\_\_\_\_ of objects that are no longer referenced in a program.

- a) memory distribution.
- b) garbage collection.
- c) storage compression.
- d) trash aggregation.

c

A catch block is executed.

- a) after all of the statements in a try block have been executed
- b) if a method executed in the try block throws any exception
- c) if a method executed in the try block throws the exception that is specified (in brackets) after the catch keyword
- d) both a and c are true

b

A(n) \_\_\_\_\_ allows a program to walk through the collection and remove elements from the collection.

- a) Set.
- b) Queue.
- c) Iterator.
- d) List.

a

In lab 4 you implemented what design pattern with the queue implementation.

- a) Model-view-controller.
- b) Singleton.
- c) Builder.
- d) Adapter.

c

Classes and methods are declared final for all but the following reasons.

- a) final methods allow inlining the code.
- b) final methods and classes prevent further inheritance.
- c) final methods are static.
- d) final methods can improve performance.

b

The code below draws a line. What color is the line? 1.

```
g.setColor(Color.red.green.yellow.red.black); 2. g.drawLine(0, 0, 100, 100);
```

- a) Red
- b) Black
- c) Green
- d) Yellow

d

Which statement best describes the relationship between superclass and subclass types.

- a) A subclass reference cannot be assigned to a superclass variable and a superclass reference cannot be assigned to a subclass variable.
- b) A subclass reference can be assigned to a superclass variable and a superclass reference can be assigned to a subclass variable.
- c) A superclass reference can be assigned to a subclass variable, but a subclass reference cannot be assigned to a superclass variable.
- d) A subclass reference can be assigned to a superclass variable, but a superclass reference cannot be assigned to a subclass variable.

b

It is a UML convention to denote the name of an abstract class in \_\_\_\_\_.

- a) bold.
- b) italics.
- c) a diamond.
- d) there is no convention of the UML to denote abstract classes—they are listed just as any other class.

c

Suppose Stack is a generic class that has one type parameter. The following assignment `Stack<Integer> integerStack = new Stack( 10 );` is \_\_\_\_\_.

- a) illegal.
- b) permitted and safe.
- c) permitted but unsafe, the compiler issues a warning message.
- d) permitted but unsafe, the runtime environment issues a warning message.

B

Which method changes the text the label displays.

- a) `changeText`.
- b) `setText`.
- c) `changeLabel`.
- d) `setLabel`.

a

Recursion can be less efficient than iteration because.

- a) it can cause an explosion of method calls.
- b) it is not as intuitive.
- c) recursive methods are harder to debug.
- d) recursive methods take longer to program.

b

Servlet get input from a client (browser) using an HTML form. The servlet accesses the form fields using \_\_\_\_\_.

- a) the ServletResponse object method getParameter().
- b) the ServletRequest object method getParameter().
- c) the ServletRequest object method getFormField().
- d) None of the above. 1

a

Which of the following statements about abstract superclasses is true.

- a) abstract superclasses may contain data.
- b) Abstract superclasses may not contain implementations of methods.
- c) abstract superclasses must declare all methods as abstract.
- d) abstract superclasses must declare all data members not given values as abstract.

c

The UML specifies a relationship called a(n) to model inheritance.

- a) inheritization.
- b) specialization.
- c) generalization.
- d) All of the above.

b

One generic Stack class could be the basis for creating many Stack classes, e.g., Stack, Stack and Stack. These classes are known as \_\_\_\_\_.

- a) subclasses.
- b) generic subclasses.
- c) concrete classes.
- d) parameterized classes.

c

An interface may contain.

- a) private static data and public abstract methods.
- b) only public abstract methods.
- c) public static final data and public abstract methods.
- d) private static data and public final methods.

b

Using layout managers \_\_\_\_\_.

- a) provides the greatest level of control over a GUI's appearance.
- b) can be faster than creating a GUI with absolute positioning.
- c) allows the programmer to specify the exact location of each GUI component with respect to the upperleft corner of the Container.
- d) allows the programmer to specify the exact location of each GUI component with respect to the lowerleft corner of the Container.

b

True or False: A protected method may not be overridden by a public method.

- a) True
- b) False

c

Which of the following sorting algorithms is the fastest.

- a) Selection sort.
- b) Insertion sort.

- c) Merge sort.
- d) They all run at roughly the same speed.

b

Which of the following is not possible.

- a) A class that implements two interfaces.
- b) A class that inherits from two classes.
- c) A class that inherits from one class, and implements an interface.
- d) All of the above are possible.

d

Consider classes A, B and C, where A is an abstract superclass, B is a concrete class that inherits from A and C is a concrete class that inherits from B. Class A declares abstract method originalMethod, implemented in class B. Which of the following statements is true of class C.

- a) Method originalMethod cannot be overridden in class C—once it has been implemented in concrete class B, it is implicitly final.
- b) Method originalMethod must be overridden in class C, or a syntax error will occur.
- c) If method originalMethod is not overridden in class C but is called by an object of class C, an error occurs.
- d) None of the above.

c

Which one of the following will not get the data from the first column of ResultSet rs, returned from executing the following SQL statement: SELECT name, rank, serialNo FROM employee.

- a) rs.getString(0);
- b) rs.getString("name");
- c) rs.getString(1);
- d) None of the above

c

Consider the following class definition: 1. public class Test extends Base {

- 2. public Test(int j) {
- 3. }
- 4. public Test(int j, int k) {
- 5. super(j, k);
- 6. }
- 7. }

Which of the following forms of constructor must exist explicitly in the definition of the Base class?

- a) Base() { }
- b) Base(int j) { }
- c) Base(int j, int k) { }
- d) Base(int j, int k, int l) { }
- e) None of the above

c

Which of the following could be used to declare abstract method method1 in abstract class Class1 (method1 returns an int and takes no arguments).

- a) public int method1();
- b) public int abstract method1();

Created by Parin

- c) public abstract int method1();
- d) public int nonfinal method1();

c

The code within a finally block executes when a try block.

- a) identifies one or more Exceptions
- b) does not identify any Exceptions
- c) either a or b
- d) neither a nor b

c

Which one of the following is not a region constant for the BorderLayout manager.

- a) CENTER.
- b) EAST.
- c) RIGHT.
- d) NORTH.

a

From which object do you ask for DatabaseMetaData.

- a) Connection.
- b) ResultSet.
- c) DriverManager.
- d) Driver.

d

The default implementation of method clone of Object performs a \_\_\_\_\_.

- a) empty copy.
- b) deep copy.
- c) full copy.
- d) shallow copy.

b

Java programs communicate with databases using what API.

- a) DBMS.
- b) JDBC.
- c) RDBMS.
- d) Database.

write singleton

SafeSingleton

d

To place an element on a queue you call the \_\_\_\_\_ method of the Queue ADT.

- a) dequeue().
- b) push().
- c) setElement().
- d) None of the above.

b

The equals() method in the String class returns a true value if \_\_\_\_\_.

- a) lengths are unequal or the characters do not match if lengths are equal
- b) lengths are equal and the characters match exactly

- c) lengths are equal and the characters match except for case
- d) lengths are equal and the characters do not match
- e) none of the above

a

What is the minimal modification that will make the code below compile correctly? 1. final class Aaa 2. { 3. int xxx; 4. void yyy() { xxx = 1; } 5. } 6. 7. 8. class Bbb extends Aaa 9. { 10. final Aaa finalref = new Aaa(); 11. 12. final void yyy() 13. { 14. System.out.println("In method yyy()"); 15. finalref.xxx = 12345; 16. } 17. }

- a) On line 1, remove the final modifier
- b) On line 10, remove the final modifier
- c) Remove line 15
- d) On lines 1 and 10, remove the final modifier
- e) The code will compile as is. no modification is needed

d

Servlets run under the control of a(n) .

- a) applet.
- b) owner class
- c) web browser
- d) web server or servlet engine

d

Which of the following keywords allows a subclass to access a superclass method even when the subclass has overridden the superclass method?

- a) protected
- b) this
- c) public
- d) super

c

In Lab 03, the implementation of Shannon's Theorem in a GUI program used the pattern.

- a) Value Object.
- b) Dependent Object.
- c) Model-View-Controller.
- d) Simple Factory.

a

Design patterns \_\_\_\_\_.

- a) are proven ways for implementing behavior that help increase cohesion and reduce coupling.
- b) are elegant ways for writing code.
- c) cannot be implemented in Java.
- d) only apply to C++. 1

c

What exception is thrown if the class loader cannot locate the driver class.

- a) NoSuchClassException.
- b) ClassCastException.
- c) ClassNotFoundException.
- d) IllegalClassException.

d

When a subclass constructor calls its superclass constructor, what happens if the superclass's constructor does not assign a value to an instance variable.

- a) A syntax error occurs.
- b) A compile-time error occurs.
- c) A run-time error occurs.
- d) The program compiles and runs because the instance variables are initialized to their default values.

c

Which of the following statements about recursion are true.

- a) Recursion can occur infinitely.
- b) Recursion uses a termination test.
- c) Both a and b.
- d) Neither a nor b. 1

a

Use AWT components for a greater level of portability and flexibility.

- a) True
- b) False

b

Which layout manager is the default for JFrame.

- a) FlowLayout.
- b) BorderLayout.
- c) GridLayout.

a

Generics provide \_\_\_\_\_ that allows programmers to catch invalid types at compile time.

- a) compile-time type safety.
- b) compile-time exception handling.
- c) compile-time error checking.
- d) run-time type safety.

- Which of these is better?

Answers:  $O(n^2)$

Created by Parin

$O(n \log n)$

## • Question 2

10 out of 10 points

If a sort algorithm take  $O(n)$  and the search algorithm takes  $O(n \log n)$  then the total complexity is

Answers:  $O(n + \log n)$

$O(n)$

$O(n \log n)$

## • Question 3

10 out of 10 points

```
void printAllPossibleOrderedPairs(int arr[], int size) {
 for (int i = 0; i < size; i++) {
 for (int j = 0; j < size; j++) {
 printf("%d = %d\n", arr[i], arr[j]);
 }
 }
}
```

This algorithm is

Answers:  $O(n^2)$

$O(n * m)$

$O(n)$

## • Question 4

10 out of 10 points

```
void printAllItemsTwice(int arr[], int size) {
 for (int i = 0; i < size; i++) {
 printf("%d\n", arr[i]);
 }

 for (int i = 0; i < size; i++) {
 printf("%d\n", arr[i]);
 }
}
```

Created by Parin

```
}
}
```

This algorithm is

Answers: **O(n)**

O(2n)

O(2n + 2)

### • Question 5

10 out of 10 points

```
void printFirstItemThenFirstHalfThenSayHi100Times(int arr[], int size) {
 printf("First element of array = %d\n", arr[0]);
 for (int i = 0; i < size/2; i++) {
 printf("%d\n", arr[i]);
 }
 for (int i = 0; i < 100; i++) {
 printf("Hi\n");
 }
}
```

This algorithm is

Answers: O(1 + n/2 + 100)

O(n/2)

**O(n)**

### • Question 6

10 out of 10 points

```
void printAllNumbersThenAllPairSums(int arr[], int size) {
 for (int i = 0; i < size; i++) {
 printf("%d\n", arr[i]);
 }
 for (int i = 0; i < size; i++) {
 for (int j = 0; j < size; j++) {
 printf("%d\n", arr[i] + arr[j]);
 }
 }
}
```
